1 Business Process Overview

The Manage New Contract process will define how service for a Business Partner will be initiated within SCE's SAP environment. This process will also seamlessly integrate with other processes such as the creation of Remote Reconnect request or Move In field work requests, Credit Check and Security Deposit assessment. Refer to the [DF-WM-02 - Handle Field Orders - Manage Field Orders](#), [DF-WM-03 - Handle Remote Orders - Manage Remote Orders](#) and [CC-FI-03 - Manage Credit - Manage Security Deposit](#) for additional details.

The New Contract process is also known as Move In process, which is the process that manages all Move In / Move Out related activities for a BP that can be executed within Hybris C4C & S/4HANA and can be extended to SCE.COM. The Contract is an agreement between SCE and the BP for the supply of service at a specific location within a specified point of time. Overall, this manages the following processes:

- New Contract, or Move In – mentioned within this document
- Move-In Adjustment – mentioned within this document
- Move-In Reversal – mentioned within this document
- End Contract, or Move-Out – discussed further in the BPD document [CIM-CS-03 - Handle Customer Move-in/Out - Contract End](#)
- Move-Out Adjustment – discussed further in the BPD document [CIM-CS-03 - Handle Customer Move-in/Out - Contract End](#)
- Move-Out Reversal – discussed further in the BPD document [CIM-CS-03 - Handle Customer Move-in/Out - Contract End](#)
- Move Contract, or Transfer – discussed further in the BPD document [CIM-CS-03 - Handle Customer Move-in/Out - Contract End](#)
- All utility specific functions of the S/4HANA landscape, in concert with the Hybris C4C components referred to in this document as the SAP Customer Relationship and Billing solution, or simply CRB.

1.1 Current Pain Points for Southern California Edison

- Deposit is manually calculated for customers with no prior history with SCE
- Inability to navigate out of the turn-on window into other fields/windows once the application is in process.
- Misalignment of Move-In date and Deposit in some cases
- If a user forgets to place the Move-In on hold when the BP is referred to Customer Verification Desk, the Move-In will be completed without following the correct process
- Agent needs to create a work order to RSO for correcting Forced on in Error/On in Error (FOIE/OIE) situations.
- The process for correcting FOIE/OIE is a manual process.
- Multiple handoffs via email between CCC, BCD and RSO when assigned business customer requests turn on

1.2 Responsible Parties

Contact	Contact Person
Southern California Edison Business Process Owner	Janet Covington
Southern California Edison Lead	Christine Evans
HCL Functional Lead	Adrian Halim
Solution Architect	Pedro Costa
Front Office Lead	Christine Evans
Subject Matter Experts	Deborah Tillman, Araceli Perez, , Scott Hirth, Frank Starke, Aida Diaz, Christina Albrecht
Key User Group	CCC, BCD, RSO, OLS

1.4 Terminology

Term/Acronym	Definition and SAP Equivalent (if applicable)
APSE	Accelerated (or Axon) Project Support Environment
BBP	Budget Billing Plan, equivalent to Level Pay Plans in SCE CSS
BDEX	SAP add-on functionality to support the processing of BPEM Cases
Billing Cycle	Is a group of contracts to be billed together via date-driven or regional criteria, it controls the billing cycle and is linked to the Meter Reading Unit. SAP equivalent term is the Portion.
Billing Document	A document that outlines the charges incurred for energy consumption for a specific contract. During the process of Billing, a billing document is generated for each contract on a contract account.
BMD	Business Master Data. The customer information which includes personal details, payment terms, dunning levels, billing rates and rate categories. The business master data objects are Business Partner, Business Agreement/Contract Account and Contract.
BP	Business Partner
BPD	Business Process Design (or Document)
BPEM	Business Process Exception Management
BWR	Basic Work Request. SAP equivalent is BPEM.
CA	Contract Account
CCRP	Customer Champion Recognition Program
Channel	Data object in SAP that holds the interval data. Intervals can be kwh, price, factor, etc. SAP equivalent is Profile.
CIMS	Customer Information Management System in SharePoint
Clarification	A list of payments that could not be processed and require additional work in order to be posted.
Connection Object	Link between installation and postal regional structure. Usually a building, but can also be a piece of property or other facility, such as a fountain or construction site. The connection object corresponds to the functional location in plant maintenance (PM).
Customer	Any entity with a relationship with SCE. This term is usually used in reference to customers (both individuals and organizations) This can include employees and third party suppliers (banks and payment partners). SAP Equivalent is Business Partner (BP)
CRB	SAP Customer Relationship & Billing system. This is what is being implemented with the CSRP program.
CRM	SAP Customer Relationship Management
User	Customer Service Representative
CVD	Customer Verification Department
EAM	SAP Enterprise Asset Management
ERP	SAP Enterprise Resource Planning
IMG	SAP Implementation Guide - where configuration is performed
Level Pay Plans	SAP equivalent term is Budget Billing. Budget Billing allows customers to pay regular equal amounts over a yearly period.
MDT	Master Data Template, is used to create Contract and Move In Document in S/4HANA
NMS	Network Management System

Term/Acronym	Definition and SAP Equivalent (if applicable)
PoD	Point of Delivery, an object in Installation
RSS	Remote Service Switch
SCE	Southern California Edison
SPI	Same Party In
Summary Billing	Standard SAP functionality that enables the invoicing of multiple Contract Accounts under one Parent Contract Account (Consolidated Summary Billing). SAP equivalent is Collective Billing.
S/4HANA	SAP ERP Central Component (SAP) – The core SAP modules (FICO, WM, SD, EAM, HR). This term is commonly used to refer to the existing SAP modules implemented at SCE
TMD	SAP Technical Master Data e.g. Connection Object, Premise and Device Location

Additional terms may be found in APSE [General Document # 32 CSRP Glossary](#)

2 Business Process Design

The processes in this document are Move In, Move In Adjustment, and Move In Reversal. The various business scenarios and integration points will be mentioned in this document as well. Since the Contract New process is integrated tightly with other processes, the detail information will be addressed in respective BPD document and the hyperlink is embedded when referencing to the document.

For Move In Adjustment and Move In Reversal request, once the BP or Contract Account or Premise data have been loaded into context in Hybris C4C, the user will authenticate and validate that the requestor is authorized to the request.

Authorized Requester

For a requestor to be authorized to request a Move In Adjustment or Move In Reversal, they must be the sold-to-party BP, a BP who has been defined as authorized by the sold-to-party BP (e.g. authorized contact relationship to the BP) or we must have received documentation that authorizes the requester (e.g., BP becomes deceased and caller is the executor or they have a power of attorney for the BP).

Authenticated Requester

By phone authentication - Caller must provide full customer name full address for Move In Adjustment/ Reversal or Contract Account number or Contract number.

2.1 Move In Details

The SAP Move In functionality is used to initiate service at a location, or perform a Move In. The SAP Contract represents an agreement between the BP and SCE for the Electricity, Gas or Water service to be delivered at the identified Premise. This commonly occurs when a BP has indicated that they are moving into a location with the intent of taking responsibility for the service. This functionality will be executed within Hybris C4C upon customer's request.

When the Move In process has successfully been completed in Hybris C4C, a Move In document will be created in S/4HANA. The Move In document contains the information about BP and CA. The creation of the Move In document will also trigger the creation of the Remote meter Service Request or Service Order for location having smart meter or location having non-smart meter to collect the move in (initial) read and turn on service.

Move In that is done via SCE.COM and Owner Allocation Workflow [CIM-CS-14 - Manage Owner Allocation](#) will create Contract and Move In document. They will apply the same business rules that are built in Hybris C4C. Interface between SCE.COM and S/4HANA is required and the interface is documented in BPD document [CIM-CS-10 - Manage Customer Self-Service](#).

New Contract creation functionality can be executed by CCC, BCD, Consumer Affairs and other departments. Refer to [Action # 339 Execution of Move-in/out by Other Departments](#) for more information.

1.1.1 Move In Guided Procedure

The New Contract process is managed as part of the guided procedure framework within Hybris C4C. This guided procedure helps User navigate through each step of this process, the four guiding procedures are:

1. Customer & Premise

2. Services
3. Contract Account & Billing
4. Review

The following details are captured in each guiding procedures:

A) Move In Guiding Procedure 1 - Customer & Premise

The user can confirm either the BP, Contract Account or Premise. Once the user confirms one of the three options, the User will initiate the Move In process from the Move In button on the bottom of the screen (Figure 1: Create Move In).

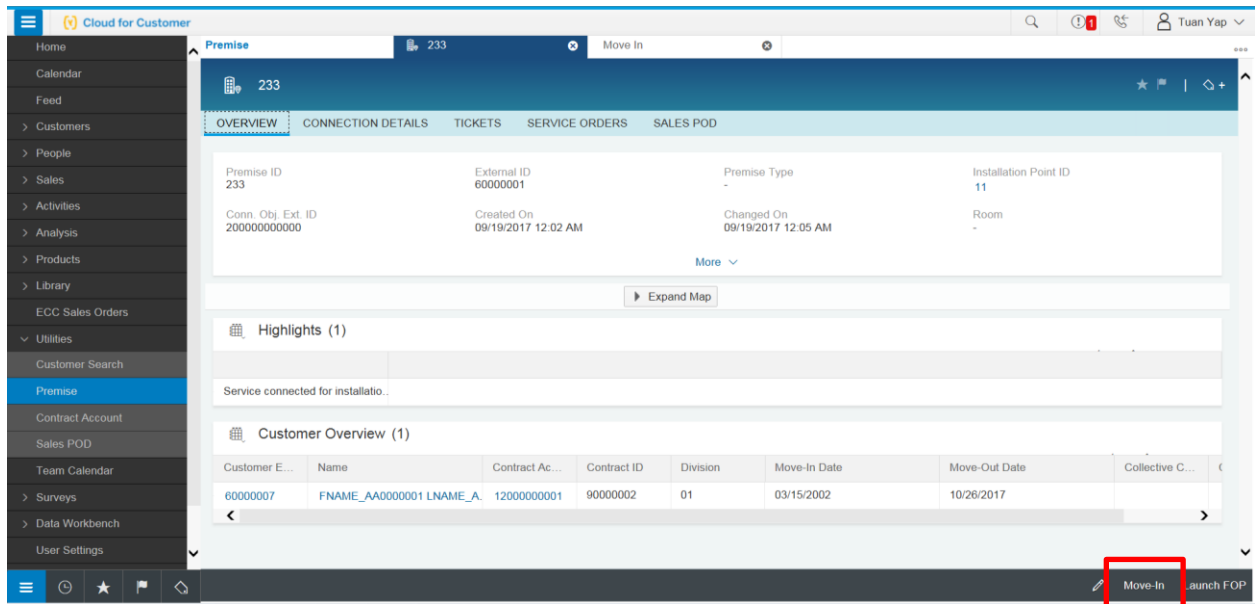

Figure 1: Create Move In

Once executed, the steps of the Move In guided procedure (Figure 2: Guiding Procedure 1 – Customer & Premise) is displayed.

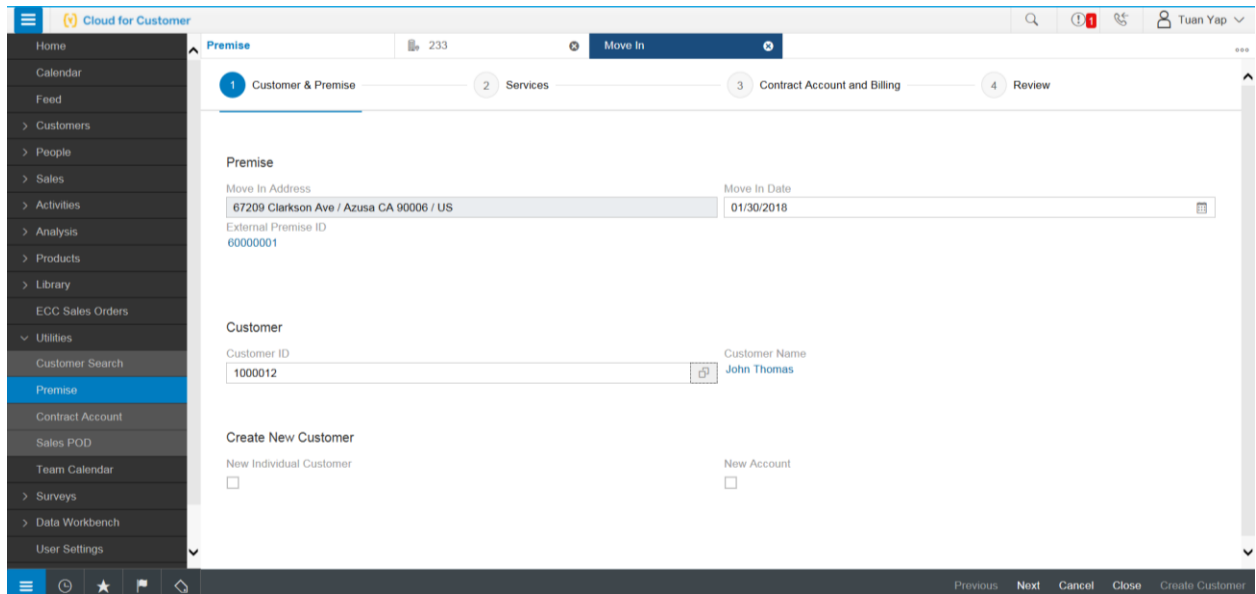

Figure 2: Guiding Procedure 1 - Customer & Premise

Move-In Premise Address

The 'Move In Address' field will be defaulted to premise address (if User has identified the premise before initiating Move In process). If the premise is not yet identified by User before initiating the Move In process, User will have to select the premise in this step before proceeding to the next guiding procedure.

Move In Date

The 'Move in Date' field is the date when the BP wants to move into the premise and take responsibility effective on that date. There is no NMS (Network Management System) or RSS (Remote Service Switch) system limitation on volumes of move ins that can be processed per day nor the day of week to be completed. Refer to [Action # 343 CIM-CS-02 Number of As Of Turn-On created](#). SCE's normal operating days for Move Ins is week days that are not company defined holidays. We will only accept a Move In request for a weekend day or holiday, on an exception basis, and only after we have validated we have sufficient field resources to complete the service connect request, in the event remote service switch does not work OR the meter is not equipped with the remote service switch. We will revisit this policy during the Process, Procedures & Policy phase of the program.

When establishing a Move In, this date will default to the System Date (equivalent to the current date) but can be changed to any date in the future or in the past without any restriction, however the Move In can impact other pending requests, based on business process procedures further defined in the BPP Document:

- If there is a Move Out scheduled and then a Move In would like to be scheduled for the same day and Installation, the user should push the Move In effective date plus one day because a Move Out and Move In cannot be scheduled for the same day. Users should determine if they should complete the action if it will change the Move Out to a non-working day (weekend day or holiday).
- When there is an existing Contract without a Move Out Date, the Move In process for that same Installation will create a force out for the existing Contract, where the Move Out Date will be the Move In date less one day.

The system will allow a user to create a same day Move-In the same as today and we are assuming we will follow the same policies as today. The process for sce.com will be further defined in the [CIM-CS-10 Manage Customer Self Service BPD](#).

Backdated move in date will trigger a force out functionality when the premise currently has an existing active contract. Move in cannot be successfully completed if the existing active contract at the premise has already been billed. Reversal of the bill will be required in order for the Move in to be successfully completed in back office system (S/4HANA). To automate the bill reversal process, the System will automatically reverse the bill of the active contract via enhancement *E-CIM-CS-03 - Move Out /Change/Reversal - Invoice Reversal*. Back dated Move in's and Reversals can be managed by the C4C and S/4HANA users. In some cases, CCC, BCD and other C4C users may create a BPEM to RSO to complete the Move In/Out reversal, adjustments and rebills.

ESC (Edison Smart Connect) Opt Out Smart Meter

A customized checkbox called 'ESC Opt Out' is introduced in this view using *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*. If BP request to opt out of smart meter, this checkbox needs to be checked. Checking or unchecking the 'ESC Opt Out' checkbox will provide the system with the information to determine if Service Order creation is required. A Meter Replacement Service Order will be created by the system automatically using *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer*.

A Meter Replacement Service Order is required when:

- Existing meter is a non-smart meter and opt out check box is not checked
- Meter is a smart meter and 'ESC Opt Out' checkbox is selected

User will create a BPEM case 'ESC Opt Out' based on customer request on ESC Opt Out Exemption via Hybris C4C Ticket. BPEM case will be routed to RSO Billing to assess if customer is eligible for exemption. RSO Billing will waive the ESC Opt-Out fees when applicable.

SCE will not bill the BP before the service has been turned on and the Move In date will sync up with the actual reconnect date of the Move-In Service Order or Move In Service Request completion date if the actual reconnect date is different than original Move In Date. This will be done via enhancement *E-DF-WM-03-Reconnection for Move-In*.

B) Move In Guiding Procedure 2 - Services

In this Move In guiding procedure (Figure 4: Guiding Procedure – Services), User will select the service(s) for the Move In. The available SAP standard services are Electricity, Water, and Gas. Premises that offer more than one service such as the Catalina area will have three line items that will appear on the view for the majority of the Move In cases. All the services are automatically selected via individual checkbox. The User needs to manually un-select the service(s) that the BP does not wish to be enrolled in. Premises with metered or unmetered residential outdoor lighting will also have additional service line item(s) appears on the view. User will de-select the line item if BP wants to exclude the outdoor lighting in the Move In.

User will be able to select ESC Opt Out checkbox if required. A check box is available for the user to check or uncheck based on the customer's request to opt-out of ESC. This will be done using enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection required and service fees*

An additional check box is presented to reflect if the premise has been marked for deletion. The deleted check box is always in display mode. If Installation is marked deleted, the Deleted checkbox will be checked and the Select Service checkbox will be set to disabled. User will not able to select the line item where Deleted checkbox is checked. This will be done using enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*.

Figure 1: Guiding Procedure - Services

Rate Category

The complete list of Rate Categories is documented in BPD document [UB-BI-05 - Analyze and Maintain Rates - Rate Structure document](#). This field will be presented as a drop-down field and currently defaulted based on the current rate category at the Installation. The Rate Category can be selected from the drop down list and this is one of the required data elements when completing the Move In process. The list of Rate Category values will be filtered based on the customer segment such as Residential and non-Residential BP. The system will only display rates that are open for new enrollments. Customer segment is defined in Installation's Billing Class. This feature will help the user to have a fast and easy way to search for the Rate Category from the list or possibly select incorrect Rate Category for the incorrect customer segment. If the user believes that the Installation's Billing Class is incorrect (should be residential and currently commercial, e.g., model homes begin with a Commercial Billing Class, but after construction is completed), a request should be submitted to change the Billing Class to Residential. The user shall complete the Move In and issue a BPEM 'Rate Category Change Request' to RSO-CBO to evaluate if the Billing Class should be changed. If field validation is required, the RSO user will issue the applicable Field Order.

There is a validation on the Rate Category selected by the user against the meter type on premise. If the Rate Category is not compatible with the meter, Hybris C4C will show an error message and user is not allowed to proceed with Move In until a compatible Rate Category is selected. This validation will be done using enhancement *E-DF-DM-04 - BRFPPlus Application for Installation*.

Front office users can create a Ticket category "Billing - Rate Category Change," when the user determines that additional steps needs to be completed (for example, any meter changes) prior to initiating the Rate Category change. The user shall issue the BPEM if needed to respective groups to complete the Rate Category Change.

Create Service Order

An enhancement will be built to create a Service Order or RSS Request automatically based on business rule without User intervention via *E-CIM-CS-02 Create Work Order during Move-In/Move-Out/Transfer*. The same enhancement will also decide what kind of RSS Request or Service Order to be created. Below are the various scenarios and Service Order/ RSS Request creation determination based on the ESC Opt Out smart meter decision during Move In.

Reconnection business rules:

- If service is disconnected (Disconnection Doc status '21'), a Reconnection Order will be created to energize the service.
- If the service is not disconnected but an outstanding disconnect document is found (service is pending disconnect), the disconnect document will be canceled to energize the service.

Smart meter (ESC) Opt In/ Out	Service Order	RSS Request
Scenario 1 : Premise has smart meter and is RSS capable		
ESC Opt-Out	If energized, create Move In Service Order with sub type of Meter Replacement (opt out). Initial read will be obtained If de-energized, create Reconnection Order with sub type of Meter Replacement (opt out). This order will replace meter, get initial meter read & energize service.	If de-energized, create RSS Request for Reconnection
ESC Opt-In	Not required.	If de-energized, create RSS Request for Reconnection .
Scenario 2 : Premise has smart meter and meter is not RSS capable:		
ESC Opt-Out	If energized, create Move In Service Order with sub type of Meter Replacement. If de-energized, create Reconnection Order with sub type of Meter Replacement (opt out). This order will replace meter, get initial meter read & energize service.	Not required.
ESC Opt-In	If de-energized, create Reconnection Order with sub type of Move In. If energized, no Service Order will be created.	Not required.
Scenario 3 : Premise has no smart meter		
ESC Opt-Out/ Opt-In	If energized, create Move In Service Order to get initial meter read.	Not required.

	If de-energized, create Reconnection Order with sub type of Move In.	
--	--	--

The eligible validation and creation of RSS Request or Service Order will be done using enhancement *E-DF-WM-03 - Reconnection for Move-In*. The same enhancement will also identify if a Reconnection Order in the Disconnection Document is required to be created by system automatically based on the Installation status. If the Installation status is 'Disconnected', a Reconnection Order will be created in the Disconnection Document to reconnect the service at the premise. Disconnection Document are documented in BPD document [DF-WM-03 - Handle Remote Orders - Manage Remote Orders](#).

The Service Order and RSS Request Start Date will have the same date as the Move In date and this will be controlled using *E-CIM-CS-02 Create Work Order during Move-In/Move-Out/Transfer*.

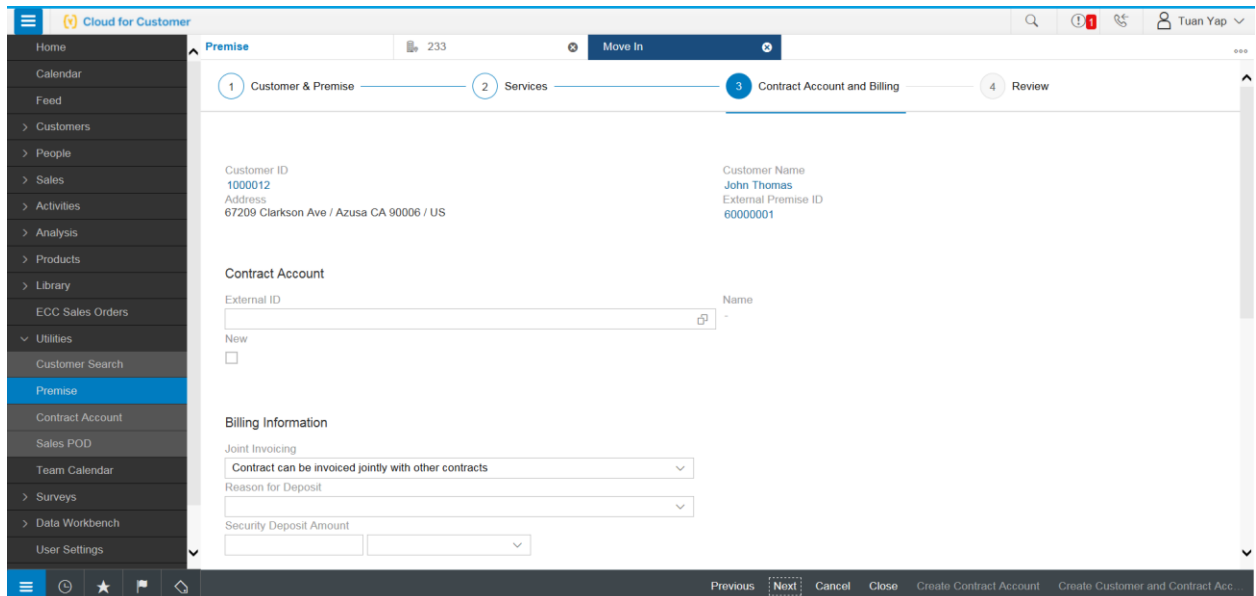

For more information about Service Order and the complete list of Service Order, refer to BPD document [DF-WM-02 - Handle Field Work - Manage Field Orders](#). For more information about RSS Request and the list of RSS Request, refer to BPD document [DF-WM-03 - Handle Remote Orders - Manage Remote Orders](#).

Meter Reading

Previous or last meter reading will be displayed in the Meter Reading section. Capturing of meter reading will be done in the next bill schedule after Move In is completed. The previous meter reading shown is only available for non-smart meter. Meter Reading section will be made hidden.

C) Move In Guiding Procedure – Contract Account and Payment

In this section, addition information such as Contract Account, mailing address, Credit Check and Security Deposit will be captured (Figure 5 & 6: Guiding Procedure 3 – Contract Account & Billing).

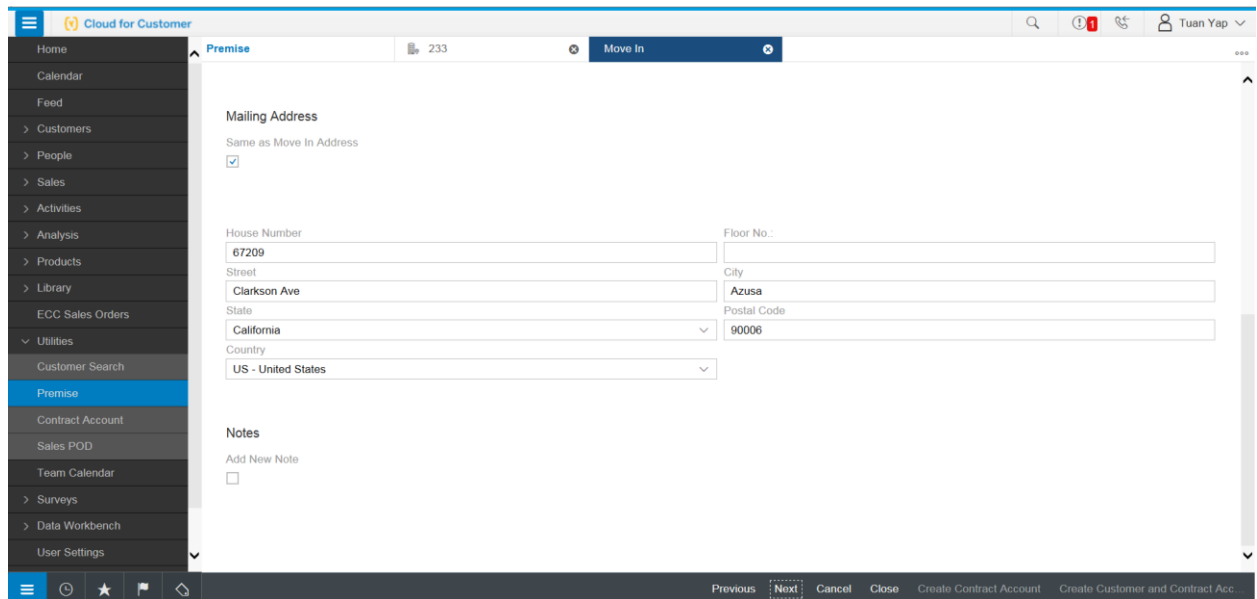

The screenshot displays the 'Move In' guiding procedure interface. The top navigation bar includes 'Home', 'Calendar', 'Feed', 'Customers', 'People', 'Sales', 'Activities', 'Analysis', 'Products', 'Library', 'ECC Sales Orders', 'Utilities', 'Customer Search', 'Premise', 'Contract Account', 'Sales POD', 'Team Calendar', 'Surveys', 'Data Workbench', and 'User Settings'. The 'Premise' section is active, showing a progress bar with four steps: 1. Customer & Premise, 2. Services, 3. Contract Account and Billing (current step), and 4. Review. The 'Contract Account and Billing' section contains the following fields:

- Customer ID:** 1000012
- Address:** 67209 Clarkson Ave / Azusa CA 90006 / US
- Customer Name:** John Thomas
- External Premise ID:** 60000001
- Contract Account:**
 - External ID:** [Text Field]
 - Name:** [Text Field]
 - New:** ☐
- Billing Information:**
 - Joint Invoicing:** ☐ Contract can be invoiced jointly with other contracts
 - Reason for Deposit:** [Text Field]
 - Security Deposit Amount:** [Text Field]

The bottom navigation bar includes 'Previous', 'Next', 'Cancel', 'Close', 'Create Contract Account', and 'Create Customer and Contract Acc'.

Figure 2: Guiding Procedure 3 - Contract Account & Billing

The screenshot shows the 'Cloud for Customer' application interface. On the left is a navigation menu with options like Home, Calendar, Feed, Customers, People, Sales, Activities, Analysis, Products, Library, ECC Sales Orders, Utilities, Customer Search, Premise, Contract Account, Sales POD, Team Calendar, Surveys, Data Workbench, and User Settings. The 'Premise' section is currently selected. The main area displays the 'Move In' process for a premise with ID 233. The 'Mailing Address' section is active, showing a checkbox for 'Same as Move In Address' which is checked. Below this are input fields for House Number (67209), Floor No., Street (Clarkson Ave), City (Azusa), State (California), Postal Code (90006), and Country (US - United States). A 'Notes' section is also present with an 'Add New Note' checkbox. At the bottom, there are navigation buttons: Previous, Next (highlighted), Cancel, Close, Create Contract Account, and Create Customer and Contract Acc.

Figure 3: Guiding Procedure 3 - Contract Account & Billing continue

Contract Account

The CA (Contract Account) is SAP master data object used to manage all Contracts and financial data. The CA is created for a BP and inherits general data from the BP. One CA contains all Contracts that belong to a BP at a Premise where the same mailing address, payment and dunning terms apply. The management of the CA is detailed further in the BPD document [CC-FI-01 - Business Master Data - Manage Contract Account document](#). Refer to [UB-BI-10 Collective and Joint Invoicing](#) for more information on joint or collective billing. Refer to [decision #552](#) for further details around DA/CCA requirements for re-use of contract account. Refer to [Action #2164](#) and [Action #305](#) for additional details around keeping Contract Accounts for Residential and Non-Residential separate.

A new Contract Account is typically created during the Move In and Transfer process. However, reusing an existing Contract Account for New Contract and Move Contract process is possible in SCE. Reuse of an existing Contract Account for New Contract and Move Contract process is allowed in SCE. Refer to BPD document [CC-FI-01 - Business Master Data - Manage Contract Account](#) and document [UB-BI-10 Joint and Collective Invoicing](#) for additional rules around reuse of contract account. Refer to [Decision # 32 CC-FI-01- Re-use or Create new Contract Accounts](#). If a new Contract Account needs to be created, the user will identify if the type of account that the Contract Account will be used, for example, Residential or Non-Residential, etc. Enhancement from *E-CC-FI-01 – CA Move-in attributes* will populate the rest of the Contract Account attributes during new Contract Account creation.

A Residential Contract Account cannot be reused for non-Residential Contract and vice versa. At the time of Move In submission, system will check the Account Class of the selected Contract Account and the Billing Class of the Installation that is having the latest time slice. This will be done using BRF+ via enhancement *E-CIM-CS-02 Validate Contract Account against Installation*. An error message will be shown on Hybris C4C if validation check failed and user will either select another Contract Account for the Move In or create a new Contract Account with the correct attribute. A mapping is required between Contract Account's Account Class and Installation's Billing Class as the entries between these fields are not 1:1.

If the BP has opted out of CCA/DA, the Contract Account will have the CCA/DA opt-out indicator populated. The system will show an informational message to the user when they have selected a Contract Account which has the CCA/DA opt-out indicator as the selected Premise will be automatically opted out of the previously opted out territory using *E-CIM-CS-02 Validate Contract Account against Installation*. When the

BP moves into another premise that is in a different CCA/DA (CCA/DA territory can be determined using *E-UB-ID-01 - 814 INBOUND CASR Processing*) and reusing the CA that is CCA/DA opt-out from a different territory, the system will prompt an error message using *E-CIM-CS-02 Validate Contract Account against Installation* when user clicks on Move In create button. User is not able to complete the Move in unless user selects a different Contract Account or create a new Contract Account for the Move In.

Mailing Address

The User will have the ability to update an existing mailing address or create a new mailing address. Such update will be reflected in the Business Partner master data.

Premise addresses will be defaulted as the Standard mailing address on the view, upon completion of Move In process, the premise address will be defaulted on the Mailing Address section on the view. If the BP does not want the premise address to be the standard mailing address, User can enter another address as standard mailing address. Refer to [Decision # 39 Use service \(premise\) address as BP standard address](#). Setting of the mailing address at Contract Account will be done by User manually in Hybris C4C Contract Account view, feature will be made available by SAP in 1808 (August 2018) release.

Credit Check

If the user determines that the Business Partner needs to have the Credit Check process completed, the user can select to do so in [CIM-CS-17 Front Office](#).

Security Deposit

As part of the guiding procedure, the system will automatically calculate and display a Security Deposit Amount for residential and non-residential customers using the SAP solution provided by 1902 release, which will be calculated as per the rules defined in the BPD document [CC-FI-03 - Manage Credit - Manage Security Deposit](#). The Security Deposit amount will be defaulted for each Contract, and a summation will be provided if multiple contracts are initiated at the same time. The User has the option to change the proposed deposit amount as well as waiving the proposed amount by setting it to zero based on business process (not in the system). (NOTE: Security Deposit amount will appear in the BP's first bill).

In the event that SAP is unable to deliver in the 1902 release an automated Deposit Calculation for Residential and Non-Residential Deposit, the user must go to FETCH to manually calculate the deposit amount due based on Business Rules. Once the dollar amount is provided/identified, the user shall manually populate the amount into the Move In document in SAP.

At SCE, the following rules will apply when assessing the deposit amount during Move In and Transfer process.

- User will have the ability to decrease or increase the proposed Security Deposit amount leveraging the business rules as guidelines.
- A Security Deposit can be waived during the move-in process when customer is eligible to Security deposit waivers per business rules. The user will create an Activity 'Security Deposit waiver' with the deposit waiver reason in the Activity Sub Category. The user can use a self-service report to extract the information if required. Refer to BPD document [CC-FI-03 - Manage Credit - Manage Security Deposit](#) for more information.
 - Deposit Billed Reasons (Default to Original during Move-In)
 - Move-In
 - Auto Re-Establishment
 - Re-Establishment

- Disconnect
 - Bankruptcy
 - Residential Guarantor Not Qualified
 - Temporary/Seasonal Service
 - Migration
- If the BP requests for a non-cash Security Deposit, User will complete the Move-In with the system calculated Security Deposit amount. The User shall send the customer the non-cash deposit options and issue a BPEM Case Category 'Credit - Move In Non Cash Deposit' to the Back Office. The RSO Credit team will create the non-cash Security Deposit in lieu of the cash Security Deposit when SCE receives the documents such as Company Guarantee, Surety Bond, or Letter of Credit from BP. Refer to BPD document [CC-FI-03 - Manage Credit - Manage Security Deposit](#) for more information.
 - There is no approval process required for any Security Deposit amount that is already calculated or overwritten by the User.
 - An SCE defined Security Deposit amount will be calculated during Move-In process when an external credit scores (e.g. from Experian) is not available for the Credit Check for new BP's. Security Deposit calculation program provided by FI enhancement *E-CC-FI-03 - Security Deposit Request (Eligibility, and Amount Determination)* will handle this scenario.
 - At time of Transfer process, the deposit held for BP will be transferred at the contract level. An additional deposit may be assessed at the time of this guiding procedure based on business rules that documented in BPD document [CC-FI-03 - Manage Credit - Manage Security Deposit](#).

Service Fees

The BP will be charged with a fee during Move In process and different types of fees are detailed below. Each Contract will have its own Service and ESC Opt Out fees.

Service Establishment fees – All BPs are to be charged with a Service Establishment fees of \$5 for residential BP and \$25 for non-residential BP during Move In except for premise that has Owner Allocation (OA) agreement. Refer to *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*.

Outside business hour fees – BP requests for Move In outside of SCE business hours for Gas or Water customers will be charged additional Service Establishment fees of \$10 for residential and \$30 for non-residential. Request for Move In to be done after 7pm Monday till Friday and weekend or public holiday is considered as outside of SCE business hours. Refer to enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*.

ESC Opt Out fees – BP who chooses to opt out of smart meter during Move In will have the work order initiated to change out the meter. Upon completion of the service order by the field, the BP will be charged respective ESC opt out. Dependent on if the BP is Care or non-Care the ESC Opt Out fees will vary. This is further defined in *E-DF-WM-02 - BRF Plus application for basic service*. BRF+ will be used to capture the business logic and derive the fees accordingly using *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*.

Below is the summary of list of Move In fees and the applicable fees:

#	Types of Move In Fees	Amount
1	Service Establishment for Residential	\$5

2	Service Establishment for Non Residential	\$25
3	Move In Outside Business Hour for Residential (water or gas)	\$10
4	Move In Outside Business Hour for Non Residential (water or gas)	\$30

Finance will define the Main & Sub Transaction code for each type of Move In fee. The types of Move In fees, amount, main & sub transaction code will be entered and stored in S/4HANA using standard SAP configuration (SPRO: Configure Charge Schedules for Dunning Procedure). BRF+ will be used to store the types of Charge Schedules. This provides the flexibility to the authorized user to add new or change the type of Move In fees item via configuration.

In the Contract Account and Payment guiding procedure view in Hybris C4C, a table containing two columns with drop down feature will be available on the view using enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*. BRF+ will default the amount on the Hybris C4C view.. There will be three line items shown as seen in Figure 4: Mock up table for Move In. Service Establishment for Residential or non-Residential amount will be defaulted by system automatically base on BP category (residential or non-residential). Amount for Move In which occurs Outside Business Hours will be shown if the Move In request is created after 7pm or Move In date is on the weekend or a public holiday.

Types of Fee	Amount
Service Establishment - residential	\$ 5.00
Service Establishment – non-residential	\$
Move In Outside Business Hour	\$

Figure 4: Mock up table for Move In fees

User has the ability to waive any fees by removing the amount in the Amount field. To waive the Service Establishment fees, the User just removes the amount that was defaulted by the system. If the premise has Owner Allocation, the Service Establishment fees will be defaulted with zero amount for the property owner Move In. The Move In for the tenant should be defaulted to the standard move in fee. Enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees* handle the defaulting fees for this scenario. The user would also waive any Service Establishment fees if the Contract is being moved from one Contract Account to another for billing purposes (unable to be summary billed; Joint or Collective billed).

When the Move In is completed, User is required to create an Activity manually in Hybris C4C to document the Move In request from BP. The user must enter the requester first name, last name and contact information in the free form text.

The fees that are incurred or waived during Move In will be documented manually by User in the Activity long text. Posting of fees captured will be done by enhancement *E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees*.

D) Review

The Summary view is the final step of the guiding procedure (Figure 5: Guiding Procedure 4 – Review) where the User can recap and review the details of the elements that they have entered during the Move In process before they proceed with the submission of the Move In. The review of the details include:

- The BP and Contract Account participating in the Move In.
- Mailing address and billing information.
- Premise and service(s) selected for enrollment along with their respective Move In date(s).
- Rate Category being offered to the Business partner.

Safety Message

The user is required to read SCE safety message to the caller requesting a Move In before completing the Move In e.g., “On the day of the turn on, please ensure all sensitive or potentially hazardous equipment is unplugged and that the conditions are safety for SCE to connect your power”. If the caller doesn’t know if it will be safe or does not agree, the user will select ‘No’ from the Safety Message Accepted field (Figure 5: Guiding Procedure 4 – Review). Otherwise, user will select ‘Yes’ from the Safety Message Accepted field. If Safety Message Accepted field is ‘No’ and meter is RSS eligible, a Service Order will be created instead of a RSS request. Safety Message Accepted field is a mandatory drop down field and user cannot submit Move In without selecting a value. The Safety Message field and Service order creation will be done using *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer*. The safety message acceptance or decline will not be stored in S/4HANA or Hybris C4C, but is required to complete so the system can initiate the correct Service Order type (RSS enabled or not).

In addition, the employee will ask the caller if our employee will have access to the meter panel on the day of the Move In. If the answer is no, the user will inform the caller that someone will need to be available at the location on the day of the Move In. Field services would go to the site to contact the customer when connecting the power, if they are not able to leave the breaker open.

Figure 5: Guiding Procedure 4 - Review

If mandatory data is missing during this process, the Move In process will not be able to be completed and the User will need to review the information and correct and / or enter the data before completing the Move In process. Upon successful completion of the Move In, several outputs are created in S/4 HANA such as Move In Document and Contract. Contract will be created directly in S/4HANA and no replication error will occur. However, the Contract and Move In Document will be created using the Master Data Template (MDT). MDT is a mechanism SAP uses to create the Contract and Move In Document. It contains logic to extract or update data from various Business Master and Technical Master data. Should there be any error encountered by MDT, the error will be captured in ISU Contract Error Monitor. Office Support or IT will monitor MDT error using Tcode ECRMREPL in S/4HANA.

There will be a MDT each for the followings:

- New Business Partner creation
- New Contract Account creation

- Residential customer Move In
- Non Residential customer Move In
- CCA/DA validation

Contract

When the Move In has been submitted via Hybris C4C, Contract will get created in S/4HANA directly using MDT. The Contract contains Contract Account number, Move-In Date, Installation number, Joint Invoicing etc.

SCE allows a Contract ADID (Account Determination ID) value to be different than the Contract Account's ADID value, e.g. Contract Account with non-residential cannot have a Contract having residential ADID. An enhancement *E-CC-FI-01 – CA Move-in attributes* is required for system to derive the ADID value for Contract during Contract creation in S/4HANA. Enhancement will have a custom mapping table to use the Rate Category to determine the Contract's ADID value.

Once the Contract is created and if the meter is a register read meter (non-smart meter), the periodic consumption record's Valid From Date (tcode EL56) for the Contract needs to be updated with Move In date by system automatically using enhancement *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer*. Without this enhancement, the new meter read will include historical reading and will not be accurate.

Move In Document

The Move In document is created by MDT in S/4HANA after the Contract has been created. The Move In document stores all data from this process including the BP and Contract data, the mailing address, bank data and meter reading data. This Move In document will also have a status field that indicates if the new meter reads have been entered, customer billed and invoiced. The creation of the Move In document will also trigger the creation of the Service Order for non-smart meter to complete the field activity for the move in request. The creation of these documents are transparent to the User.

1.1.2 Same Party In (SPI)

The Move In is identified as SPI when the premise is at Dunning Disconnected situation and the same BP or family member/roommate/friend is trying to get service back by requesting a new Move-In. As a result, this can be considered as SPI scenario and a BPEM Case category 'Credit - Same Party In' will be created by system automatically when any of the below criteria is met. This will be done via enhancement *E-CIM-CS-02 – Same Party In identification and indicator and BPEM case creation*. BPEM case will be routed to RSO CAPS to work on. Contract will be created and marked for Blocked for Billing by system. No Service Order or RSS Request will be created. Checking on SPI will be done after Move In is submitted and validation will be done by MDT (master data template). The intention is to move the SPI processing to the background and does not hold up the Hybris C4C screen.

RSO CAPS will attend to the BPEM and carry out the SPI investigation. Once the investigation is completed by RSO CAPS and if Move In is approved, RSO CAPS will remove the Billing Block reason and create Service Order or RSS Request to provide service to BP. If Move In is not approved, RSO CAPS will reverse the Move In. Refer to [*ACTION # 341 Same Party In \(SPI\) Validation during Move-In*](#).

1. Return Check within the past 30 days
2. Four or more Move-Ins for the premise with the last 12 months

3. CAP profile or has been CAP (Cut at pole) with the last 90 days
4. Last active BP had service forced off or turned off within the last 90 days and was issued a transferred closing bill
5. Last active BP has a Dunning Disconnect with the last 90 days
6. Last active BP had two or more Payment Extensions or Payment Arrangements denied within the last 90 days
7. Last active BP has a disconnect balance of \$300 or more
8. Last active BP had an Unauthorized Use profile (BPEM created for Revenue Protection). Unauthorized use is captured in BPD [UB-DM-07 Revenue Protection](#)
9. Move In is identified as SPI by the system. This can be done by checking on the 'Same Party In' BPEM case created for the premise

SPI can be identified from Field. Based on the response from the field personnel, if premise is suspect of SPI, Service Order is marked 'Incomplete' with Code 'Others' by field personnel and noted as 'SPI'. Field team will create a BPEM case category 'Credit - Same Party In' manually. The BPEM case will route to RSO to work on.

1.1.3 Self-Certified Sensitive

It is a Regulatory requirement to identify and capture in the system that the premise has an occupant that requires special care i.e. Critical Care. As referenced in [PP-CS-02 Program Enrollment and Delivery](#), the Premise will be marked with Supply Guarantee and will be included in the Collection Process but will be excluded from being Dunning Disconnected for 90 days. BP is responsible to provide supporting document for SCE to setup as Critical Care BP before 90 days laps. Uses will also need to update the BP with the associated BP ID Type, as documented in [CIM-CS-01 Manage Business Partner](#).

1.1.4 Clean and Show

Clean and Show is a temporary connection of service for the landlord to showcase the premise for potential tenant or buyer. This information will not be captured in SAP as there is no other processes that required this information. The landlord or property owner would need to keep the service in their name and energized (reconnect) and would be responsible for applicable fees.

1.1.5 SB 120 – Rental Properties

SB 120 is a regulatory requirement that SCE needs to comply with. SCE to provide tenant disconnected or soon to be disconnected property against utility turn off when landlord fails to pay bill.

When a rental property is identified during Move In, user will create an Installation Fact for 'Landlord-Tenant' via FOP to S/4HANA (tcode ES32 - Installation).

When landlord did not pay the bill and collection activities start, Dunning program will check the installation facts using enhancement *E-CC-FI-04 - BRF+ rules*. If a 'Landlord-Tenant' installation fact is setup for the Contract, Dunning program will initiate the communication (refer to [CC-FI-04 - Manage Collections \(Dunning\) - Manage Credit and Collections](#) for the Form) to the Service Address via BPD ([CIM-CS-11 Handle Outbound Request](#)) to see if the tenant would like to take over the service. If tenant does not request service in their name, Dunning Disconnect will proceed otherwise Dunning Disconnect will be aborted, as new BP will take service with respective Move In date.

1.1.6 Meter Access Information

It is important to capture meter access information such as locked gate and number of dogs. This information will be captured outside of the Move-In process and will be captured in Service Order Description field via Hybris C4C. Information captured will be shown on the Service Order note in S/4HANA. Refer to BPD document [DF-WM-02 – Handle Field Orders – Manage Field Orders](#) for more information.

Service Order ID	Description	Service Ord...	Created On	Status

Description
replace meter is needed to fulfill. Caution the 2 dogs in premise!

Figure 6: Service Order note

1.1.7 Fuse-up Inspection

Fuse-up Inspection, may be required whenever there is a Move In for certain cities such as Huntington Beach, and Placentia.

Fuse-up Inspection can be determined by the following sources:

- BP informs User that City Inspection is required
- User manually identify that premise is located in Huntington Beach, or Placentia, and premise has been vacated for more than 30 days.
- When Fuse-up Inspection is identified to be required, the user will proceed with the Move In. User will cancel the Service Order, Reconnection Order and set a Billing Block reason in the Contract in S/4HANA via FOP so that BP does not get service established. BP will need to work with the city on the Fuse-up Inspection. Once the Fuse-up Inspection is completed, BP will contact Planning Department to request for Move In completion. BP will provide necessary Fuse-up Inspection completion document from city to support the Move In. Planning team will upload the document, if applicable, to Open Text Document Repository system. Refer BPD document [CIM-CS-09 - Manage Inbound Request](#) for more information. Planning department will then remove Billing Block Reason in Contract and issue the Service Order, Reconnection Order to complete the Move In.

1.1.8 Programs & Services Offering

User is able to enroll BP with programs and services after the Move In is completed. The User will locate the Contract and Programs & Services offering will be presented to the user when the 'Rate Change' button is selected. If the user wants to skip program & services offering, the user will not select the 'Rate Change' button. Refer to BPD document [PP-02 – Program Enrollment and Delivery, De-Enrollment & Decommission Programs](#) for more information.

1.1.9 Metered Streetlight

The User will execute Move-In for outdoor lighting that resides outside of the BP premise. Metered Streetlight will be created as an Installation. The user shall select a Meter Streetlight Rate category if the Move-In is done at a location having metered Streetlight.

1.1.10 Unmetered Streetlight

One Installation will be created for all unmetered streetlights in an area (e.g. parking lot) and the unmetered streetlight poles will be created as Installation Facts within that Installation. If a customer calls to request a Move-In, the user will not proceed with the Move In but instead create a BPEM case category 'Services - Move In Streetlight'. BPEM case will be routed to RSO – CBO Unmetered Streetlight Desk to initiate the paperwork/processing. RSO will create the Contract Account and reassign the BPEM case to T&D. After T&D completes the setup, T&D will reassign the BPEM to RSO. RSO CBO Unmetered Streetlight Desk will complete the move in process as needed based on processing completed with T&D.

1.1.11 Mobile Home Parks

When a Mobile Home park is transitioning from master-metered/sub-metered to independent metering for each tenant, the new independent metering will be added prior to the removal of the sub-meter. The technical master data for the new independent meter needs to be created via Design Manager to S/4HANA prior to executing the Move In process.

Once the meter is ready to have service established, T&D will send an email to CCC to issue Move In requests for all required tenants (including the Move In details). The front office will create the Business Partner (if needed) and process the Move In requests and add all programs as required (e.g., continuation of MBL). Once complete, the user will send an email to T&D "Mobile Home Park Move Ins" to advise that the Move Ins have been issued. T&D will advise the customers that the utility account is now in their name.

If a tenant calls to request the Move In before the metering changes have been completed in the system, the user will send an email to T&D "Mobile Home Park conversion question" to advise the customer the status of their request.

1.1.12 CCA/DA

Certain territories offer Community Choice Aggregation or Direct Access by filing the necessary enrollment and Implementation plans with the CPUC. CCA participating identifier is a PA (Public Authority) Code which is stored in the Connection Object characteristic.

After BP has enrolled with CCA/DA, CCA/DA name will be captured in the ESP provider in S/4HANA. The CCA supply scenario is 'UDC'. DA supply scenarios are 'UDC', 'Dual', and 'SCB.' If the Supply Scenario value is 'SCE', it means the premise is with SCE and not participating in CCA or DA. User can view these information in a customized view in Hybris C4C via *E-CIM-CS-17 C4C Custom View for IDEX (CCA/DA)* as documented in [CIM-CS-17 Front Office](#).

CCA Opt Out

BP resides in a CCA territory can currently only chose to opt out of CCA outside of Move In process. CCA Opt Out indicator is stored at the Contract Account. User will go navigate to a customized view to view opt out and territory information in Hybris C4C via *E-CIM-CS-17 C4C Custom View for IDEX (CCA/DA)*. In the event BP that opted out of CCA is transferring to a different premise, the following action needs to be carried out:

- Transfer within the same CCA territory
 - BP will remain opted out by re-using the same Contract Account. If BP decided to use a new Contract Account, BP will be opted in to CCA
 - A Regular Move In MDT will be used by Move In process to complete the Move In using *E-CIM-CS-02 - Move-in default*
- Move In or Transfer to different CCA territory
 - A new Contract Account is required if switch territory. CCA Opt out flag will not be valid for the new premise since it is in a different CCA territory
 - A IDEX MDT will be used by Move In process to complete the Move In *E-CIM-CS-02 - Move-in default*
- Move In or Transfer to a non CCA territory
 - A Regular Move In MDT will be used by Move In process to complete the Move In using

A program (method) will be provided by IDEX *E-UB-ID-01 - 814 INBOUND CASR Processing* to determine the transfer scenario mentioned above for Move In program to trigger the respective MDT using *E-CIM-CS-02 - Move-in default*. Move In program will pass old premise #, new premise #, Contract Account # (reuse Contract Account). The return parameter is either one of the scenario mentioned above.

If BP is transferring back to a CCA territory where it was previously opted out. The Move In program will use a regular Move In MDT via *E-CIM-CS-02 - Move-in default* to complete the Move In. A program (method) will be provided by IDEX *E-UB-ID-01 - 814 INBOUND CASR Processing* to determine this scenario.

A Contract Account cannot have a CCA and a non CCA Contract. The user will need to create a new Contract account for such scenario.

A customer can choose to opt out of CCA service at time of mass enrollment. Mass enrollment will be document in BPD document [UB-ID-01 - Process EDI Contracts – Enrollment](#).

The CCA could allow or not allow SCE to process an opt out on its behalf, this identifier is available in Service Provider master data, refer to BPD document [UB-ID-01 Process EDI Contracts - Enrollment](#) for more information. If SCE is able to process opt outs for a particular CCA, the CCA Opt Out will be captured by the user, refer to BPD [CIM-CS-17 - Front Office](#).

1.1.13 NEM

To identify an existing or previous customer who was enrolled in NEM, user would navigate to Billing Parameter (Installation Facts) faucet. Installation Facts will contain NEM item.

Refer to BPD document [UB-BI-12 Calculate Energy Bill - Net Metering](#) for additional information such as automatic creation of BPEM case.

1.1.14 Cut in Flat

Cut in Flat condition exists when a BP's service is by-passed and left unmetered as a result of the customer adding load to company lines to a new meter location. Cut in Flat is also a result of emergency conditions where customer panels are by-passed to allow service to continue until repairs are done to facilitate a meter installation. Cut in Flat can be identified by Service personnel and a back office user will update the Cut in Flat indicator in Installation Fact in S/4HANA via Tcode ES32. Refer to BPD document [UB-BI-01 Calculate Energy Bill-Unmetered and Register Read](#) for detail information about Cut in Flat. Reporting will identify meters which are Cut In Flat. RSO CBO users will address and correct the installation. Refer to BPD document, [UB-BI-01 Calculate Energy Bill – Unmetered and Register Meter Billing](#).

1.1.15 Refer Move-In to Offline Support

To better utilize the Users time in serving other BPs, users may defer the Move-in to Offline Support, in this instance, the user will create a Ticket case category 'Service - Move In Max Capacity' manually in Hybris C4C and the Ticket will route to the Offline Support team. Offline Support team will attend to the Ticket and contact BP if needed to carry out the Move-In.

1.1.16 Force Out

During the Move-In process, if the Premise is occupied then an automatic force out will be created for the current BP at that Premise. There will be one day of lapsed time between the forced out BP and the new BP.

SAP does not allow Move-In and Move-Out on the same day. User is required to inform BP that regardless of the move out time, the previous customer is to be held accountable for any consumption on the entire move-out day of occupancy. Refer to [Decision # 21 Front Office to inform customer about to be responsible for any consumption](#).

If a Move In request for the new party results in a Move Out for water service and there is a water restrictor installed, the user shall refer to the [CIM-CS-03 Handle Customer Move In/Out – Contract End](#).

1.1.17 Capturing of notes

User will capture any notes during Move-In process in an Activity long text. If an authorized caller calls on behalf of BP, the caller first and last name, contact information and relationship to the BP will be documented in the Activity.

1.1.18 New Construction

Move In when there is no Technical Master Data found will require the user navigate to the Mash up in C4C for Design Manager via enhancement *E-CIM-CS-02 - Transaction Launcher*, see [CIM-CS-17 Front Office](#) for additional information. The user will navigate to Design Manager using single sign on and search existing Design Manager Service Request's (SR) in an effort to avoid duplication of requests, if not found, the user

will proceed to create the SR, completing all required fields. Once the SR is created, the Planning team will begin work to create the Technical Master Data in S/4HANA. Move In can then be created once Technical Master Data is created. Refer to BPD [DF-WM-01 - Process New Business - Manage New Business](#) for the detail process.

1.1.19 Owner Allocation

Automatic landlord move in for Owner Allocation will be done by Owner Allocation workflow. Refer to BPD document [CIM-CS-14 - Manage Owner Allocation](#) for more information.

1.1.20 Budget Billing Plan

Budget Billing Plan (BBP) is known as Level Payment Plan in SCE legacy system. BBP functionality offers the BP to pay their estimated annual bill charges spread across a predefined number of months. The User will create BBP in Hybris C4C after the completed Move In process. Creating a BBP is optional and is based on BP request. For more information about BBP, refer to document BPD document [UB-BI-11 - Manage Billing Arrangements - Payment Plan](#).

1.1.21 Added Facility

Added Facility is where additional equipment beyond what is normally supplied. Added Facility will be created as an Installation with a Division called 'Added Facility'. The BP needs to sign a contract and is responsible for the added facility charges. These charges are considered non energy billing. Refer to BPD document [UB-BI-06 - Calculate Non-Energy Bill - Miscellaneous Billing](#) for more information.

The BP can request Added Facility via BCD Account Executive during or after the Move In process. When the BP contacts SCE for Added Facility request and if BP accepts the Added Facility, user will complete the Move In for Added Facility along with other services (Electric, Gas & Water). After Move In is submitted, system will create a BPEM 'Services – Added Facilities Inquiry' by MDT using *E-CIM-CS-02 – Same Party In identification and indicator and BPEM case creation*. BPEM case will be routed to T&D to complete the update the contract to new BP. Once T&D completed the BPEM, T&D will assign the BPEM to RSO. User will also mark Contract for Billing Block via Hybris C4C.

If customer declines the Added Facility, the user will submit the Move In for the other services (Electric, Gas & Water) and not the Added Facility. The MDT will create a BPEM case category 'Services - Added Facility Request' after Move In is submitted using *E-CIM-CS-02 – Same Party In identification and indicator and BPEM case creation* and BPEM case will be routed to T&D. T&D will attend to the BPEM and create an Assignment Assumption contract. BP is required to provide the necessary document to T&D. Documents will be scanned and uploaded to Open Text Document Repository system. Refer BPD document [CIM-CS-09 - Manage Inbound Request for more information](#).

1.1.22 EDI Billing

User will create a BPEM Case Category 'EDI Billing' manually when BP requests for EDI Billing during Move In. User will complete the Move In as usual. BPEM case will be routed to EDI Billing Desk to assign BP with EDI Billing.

1.1.23 Collective Billing

If a customer requests Collective billing for the Move In account (add to an existing collective account or to create a collective account), the user will complete the Move In with a new Contract Account and issue a

Ticket to create the BPEM to RSO “Billing – Collective Billing Request” to complete Collective account setup/changes.

1.1.24 NAICS Code

The Installation ‘Industry’ will need to be determined by the user when the non-residential Move In is created with the appropriate North American Industry Classification System (NAICS) code. If the new party in wants to change the classification of the Installation due to an operational change at that location so they can be on the appropriate rates and programs (e.g., change from manufacturing to retail trade), the user will select the new NAICS code from Industry field in Installation screen via Hybris C4C FOP (Tcode ES32) using *E-CIM-CS-02 - Transaction Launcher*. Note: NAICS is only applicable to non-residential customers and will need to be left blank for residential customers. The NAICS codes will need to be set at the 5 digit detail code located at <https://www.naics.com/search/>.

The NAICS code can also be updated in BP Master in Hybris C4C. Refer to BPD [CIM-CS-01 - Business Master Data - Manage Business Partner](#).

1.1.25 Primary & Secondary Premise

The user can tag the moving premise Primary Premise by navigating to S/4HANA FOP (Tcode ES32) after completing the Move In process. User will select the Primary Premise operand in the Installation Fact by providing the start date. The Installation Fact will be used by Program & Product for MBL and CARE.

2.2 Move In Adjustment

SAP allows the completed Move In to be changed when necessary. The BP could change his/her mind about the Move In. User will then use the functionality Change Move In to do the following change:

- Move In Date
- Rate Category

The User will capture any notes during the Move In Adjustment Process as an Activity Record in Hybris C4C manually. The detail information will be documented in the Activity Record’s long text. If an authorized caller calls on behalf of BP, the caller first and last name, contact information and relationship to the BP will be documented in the Activity.

1.1.26 Move In Date Change

The Move-In Date Change is used when a BP wants to change the Start Date on an existing Contract, which changes the Move In date for the BP at the Premise. Any associated order with the new contract will be automatically updated to reflect the change of date via enhancement *E-CIM-CS-02 - Align new Move-In date to Service Order*. This Move In date can be changed to any date in the future or past which subject to the following conditions:

- The Contract has yet to be billed.

- The new Move In date is greater than the Move Out date of the previous Contract for the same premise. SAP does not allow new Move In date to be less than the Move Out date of the previous Contract.
- Changing of the Move In date will not automatically adjust the Move Out date of the previously forced out/moved out contract. Additionally, the following conditions also apply during the Move In Date Change process:
 - Move In Meter Reading Service Order start date will be updated. This will be done via enhancement *E-CIM-CS-02 - Align new Move-In date to Service Order*.
 - New Move In date will be updated to RSS Request if meter is a RSS capable smart meter, this will be done via enhancement *E-CIM-CS-02 - Align new Move-In date to Service Order*.

There will be no change to the requested Security Deposit amount in the case of a change to the Move-In date.

Should the user select a backdated move-in date and the existing Contract on premise has been billed beyond the new move-in date, the system shall automatically reverse the bill and this can be achieved via E-CIM-CS-03 - Move Out /Change/Reversal - Invoice Reversal.

If the Contract is CCA/DA and Move In is pending (future date) or completed (past dated), program will trigger IDEx program using enhancement *E-UB-ID-01 - 814 INBOUND CASR Processing* and *E-UB-ID-01 - INBOUND DASR Processing* to send date change maintenance request to respective CCA/DA. Refer to BPD document [UB-ID-03 - Process EDI Contract Data Changes](#) for more information.

If the meter is a register read meter (non-smart meter), the periodic consumption record's Valid From Date (tcode EL56) for the Contract needs to be updated with new Move In date by system automatically using enhancement *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer*.

1.1.27 Rate Category Change

A Rate Category change enables a User to update the Rate Category for an existing Contract after Move In is completed. For additional information about Rate Categories, refer to the BPD document [UB-BI-07 Rate Change](#) & [UB-BI-05 - Analyze and Maintain Rates - Rate Structure](#).

User is able to select Rate Categories from a selective drop down list. List of Rate Categories is shown based on Billing Class for rates that are open to new enrollment. The business rules of showing selective Rate Category based on Billing Class are the same business rules that are identified in the Move In section in this document.

User will select the Rate Category from the drop down list. There is a validation on the Rate Category selected by the user against the meter type on premise. If the Rate Category is not compatible with the meter, Hybris C4C will show an error message and user is not allowed to proceed with Rate Category Change until a compatible Rate Category is selected. This validation will be done using enhancement *E-DF-DM-04 - BRFLPlus Application for Installation as noted in BPD DF-DM-04 Handle Field Orders- Manage Device Installation/Replacement/Removal/Re-program*. If it is a CCA/DA Contract, a CCA/DA Rate eligibility check will be done using enhancement *E-UB-ID-01 - 814 INBOUND CASR Processing* and *E-UB-ID-01 - INBOUND DASR Processing*. See [UB-ID-01 Process EDI Contracts- Enrollment](#) for additional information. An error message will be shown in Hybris C4C and user is not allowed to proceed with Rate Category Change until an eligible rate is selected. User will abort Rate Category Change process. User will also create BPDM Case Category 'Billing - Rate Category Change Request'.

If user is unable to complete Rate Change, they will refer the Rate Category Change to RSO, creating a BPDM Case category 'Billing - Rate Change Request' (RSO). BPDM case will be routed to RSO Billing and RSO Billing will initiate the bill adjustment followed by Rate Category change for the next billing cycle.

The Rate Category Change can be executed when the following conditions exist:

- The new Rate Category is applicable to the Installation being processed.
- The Rate Category change date will not be in a bill period already billed (has to be for the next billing cycle).
- Contract does not have a Move Out date, Move Out has not initiated for the premise.
- Retroactive rate changes require a back office intervention since additional steps need to be taken for SAP/MDUS to sequence and stage data/billing request. Due to the constraints with the current bill print layout, the discussion during the requirement workshops for [UB-BI-09 Produce Invoice – Print Invoice](#) is to have only one rate category per bill. System will default next bill cycle date on the view, this will be done via enhancement [E-CIM-CS-02-1-010 Default next bill cycle date](#).

Billing parameters i.e. Installation Facts can be modified or viewed via Rate Category Change view.

The User is required to read a script to the BP before completing the Rate Category change. The script will be shown using Hybris C4C Survey and the verbiage is (for example):

“Do you agree to the following Terms and Conditions regarding your rate change?

1. That any analysis that was done on your account is simply an estimate of accounts and savings based on available information, and that your actual bill may differ from that estimate.
2. That by changing your rate schedule you may be prohibited from changing to another rate for a period of 12 months.”

If the BP answers ‘Yes’, User will complete reading the script with “Once your rate change is processed your new rate will become effective on the following scheduled meter read date”.

Rate Change Matrix				
Capability	Move-In	New Enrollment	IVR/SCE.COM	Move Out
Rate Change - Simple	Hybris C4C ok S/4HANA ok	Hybris C4C ok S/4HANA ok	Manu-Matic BPEM in S/4HANA	N/A
Rate Attribute Change	C4C (PnP) S/4HANA (U&B)	C4C (PnP) S/4HANA (U&B)	Manu-Matic BPEM in S/4HANA (if web-service RICEFW is approved)	Contract level items will automatically be removed. Non- Contract level items require manual removal
Rate Change - Complex	C4C to establish on OAT, then BPEM. S/4HANA ok; (open on OAT, then BPEM's to establish complex riders/contracts)	C4C to establish on OAT, then BPEM. S/4HANA ok; (open on OAT, then BPEM's to establish complex riders/contracts)	BPEM in S/4HANA	N/A

1.1.28 Programs & Services

Start date of the programs & services enrolled by BP will be adjusted automatically after Move In Date Change is completed. Refer to BPD document [PP-02 - Program Enrollment and Delivery, De-Enrollment & Decommission Programs](#) for more information.

2.3 Move In Reversal

The Move In reversal process is used when a BP would like to cancel their New Contract request. This function will also be utilized if a User inadvertently initiates a Move In for a BP at the wrong Premise. If the Contract has a Move Out date in the system the user must cancel the Move Out before issuing the Move In reversal, if they overlap. The Move In reversal in Hybris C4C also executes an automatic reversal of the Move In Document in S/4HANA automatically. Cancellation of Service Order associated with the new contract will be done via enhancement *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer* provided the Service Order status is not completed. If needed, the user can issue a Service Order to connect service at the BPs original premise, but this should be done by the system automatically during the reversal. If an invoice has already been processed for the Move In due to error, an enhancement will automatically reverse the invoices that have been created for the Contract when Move In is reversed using *E-CIM-CS-03 - Move Out /Change/Reversal - Invoice Reversal*. Refer to [Decision # 40 CIM-CS-02 Invoice reversal](#).

If the front office cannot successfully perform a Move In Reversal or decides that RSO CBO should process it, they will issue a Ticket to create a BPEM case category 'Move In Reversal' to RSO CBO.

The periodic consumption record's (tcode EL56) for the Contract needs to be deleted using enhancement *E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer*. The time sliced periodic consumption record was created during Move In and hence it needs to be deleted.

The following conditions also apply during the Move In reversal process:

- A User will be allowed to Cancel Contracts for a BP who is enrolled with a CCA/DA.
- The request for Security deposit that generated by system during Move In will be cancelled automatically at the time the Move In is cancelled.
- The Security Deposit amount will be refunded to the BP if it has been paid by that BP.
- Any Service Charges that charged by system during Move In will be reversed by system automatically.
- If there is any Installment Plan created for the Contract, the Installment Plan will be deactivated by the system automatically.
- If there is any Budget Billing Plan created for the Contract, it needs to be canceled by Front Office user manually.
- If a pending Move In Service Request or Service Order exists for the Premise, then it will be cancelled so the Device remains locked until such time that SCE gets a request for another Move In.
- If the Move In process has a force out, when Move In is reversed, the forced out Contract will NOT be reinstated, the user must reinstate it manually if needed.
- If the move in is reversed, any Installation Facts which are contract relevant will be automatically reinstated. Examples of Contract relevant Installation Facts are CARE, FERA, NEM, etc.

1.1.29 Capture of notes

The User will capture any notes during Move In Reversal Process as an Activity in Hybris C4C manually. The detail information will be documented in the Activity Record's long text. If an authorized caller calls on

behalf of BP, the caller first and last name, contact information and relationship to the BP will be documented in the Activity Record.

1.1.30 Programs & Services

Programs & Services enrolled for BP during Move In process will be deactivated automatically. Refer to BPD document [PP-CS-02 - Program Enrollment and Delivery, De-Enrollment & Decommission Programs](#) for more information.

1.1.31 CCA/DA

If the Contract is CCA or DA, Move In Reversal program will trigger an IDEX enhancement *E-UB-ID-01 - 814 INBOUND CASR Processing* and *E-UB-ID-01 - INBOUND DASR Processing* to send reversal maintenance request to respective CCA/DA. Refer to BPD document [UB-ID-03 - Process EDI Contract Data Changes](#) for more information.

1.1.32 Service Order & Disconnection Document

The Move In Meter Reading Service Order and Reconnection Order in the Disconnection Document needs to be cancelled using *E-DF-WM-03 - Reconnection for Move-In*, for further information refer to [DF-DM-03 Handle Remote Orders – Manage Remote Orders](#). If the Move In Meter Reading Order status is marked 'Completed', Service Order cancellation is not required.

The Reconnection Order in the Disconnection Document needs to be canceled as well. If the Reconnection Order in the Disconnection Document is already completed, a new Disconnection Document will be created by the system automatically for this scenario to disconnect the service at the premise. This enhancement will be done using *E-DF-WM-03 - Reconnection for Move-In*.

Refer to [DF-WM-03 - Handle Remote Orders - Manage Remote Orders](#) for more information on Disconnection Document.

2.4 Process / Performance Improvement

- Ability to navigate away from Move In view without exiting from current view
- The user may process Reversals when a BP calls and reports an incorrect Move in date
- BCD will be able to process Move ins for non-residential business customers as needed
- Invoice is automatically reversed when the Move in Reversal is executed up to one bill period by front office users, whereas Billing users would have unrestricted access.
- Added Facilities Contracts as well as Unmetered Streetlights will be visible to the user when associated with the Connection Object for the Electricity Meter; increasing likelihood of having the correct BP associated with the Service as they are visible during Move in.

2.5 Prerequisites and Inputs

A request to create or change Move In prerequisites are:

- Move In Creation:
 - o BP and Premise needs to be located in order to initiate Move In creation
 - o New Contract Account can be created or reused for each new Move In
 - o Move In Date and Rate Category will need to be selected during Move In process
 - o Service Establishment fees is derived by system automatically
- Move In Date Change:
 - o New Move In Date
- Rate Category Change:
 - o New Rate Category
 - o New Rate effective date
- Move In Reversal:
 - o Cancel Move In button

2.6 General Assumptions

- BCD will be able to execute Move Ins for non-residential BPs as needed.
- If an Assigned Organization (non residential) BP calls the CCC for a move in, the CCC will process the move in.
- In the event of Move In Date Change and Reversal, the Program & Service will be updated by Program and Product's automatically. This is with the assumption that PP RICEFW items associated with these functionalities are approved in their BPD
- If the number of Move In requests exceeds number based on business rules for CCC and call volumes are high, then a Ticket will be created manually for an Off Line Support team to process the request.
- A BP and Contract Account must exist in the system before a Move in can occur
- A Premise and Installation Must exist in the system before a Move in can occur
- A Move in cannot take place the same day as a Move out
- The Product (Rate) will be defaulted to the prior BP Product but may be changed by the user.
- Users will create Service Requests, search existing, edit Service Request for Planning using a SSO to Design Manager.
- Planning Department will create new Technical Master Data in SAP, via a request submitted via Design Manager.
- Various users in T&D will have access to SAP to complete BPEM's assigned to them.
- Unmetered streetlights will require a BPEM 'Services – Move In Streetlight' to RSO CBO Streetlight Desk to complete move in.
- Added Facilities will be created as a Division in SAP. Front office users can initiate a move in for Added Facility and the BPEM 'Services – Added Facilities' will be generated automatically.

2.7 Business Process Hierarchy

This Business Process Hierarchy provides a listing of all scenarios/business processes, sub-processes, and SAP Transaction codes identified to support this process.

Level 1	Level 2	Level 3	Level 4
FO	Handle Customer Move-In/Out	Contract New	Create Move In
FO	Handle Customer Move-In/Out	Contract New	Change Move In Date
FO	Handle Customer Move-In/Out	Contract New	Rate Category Change
FO	Handle Customer Move-In/Out	Contract New	Move In Reversal
FO	Handle Customer Move-In/Out	Contract New	Display Contract

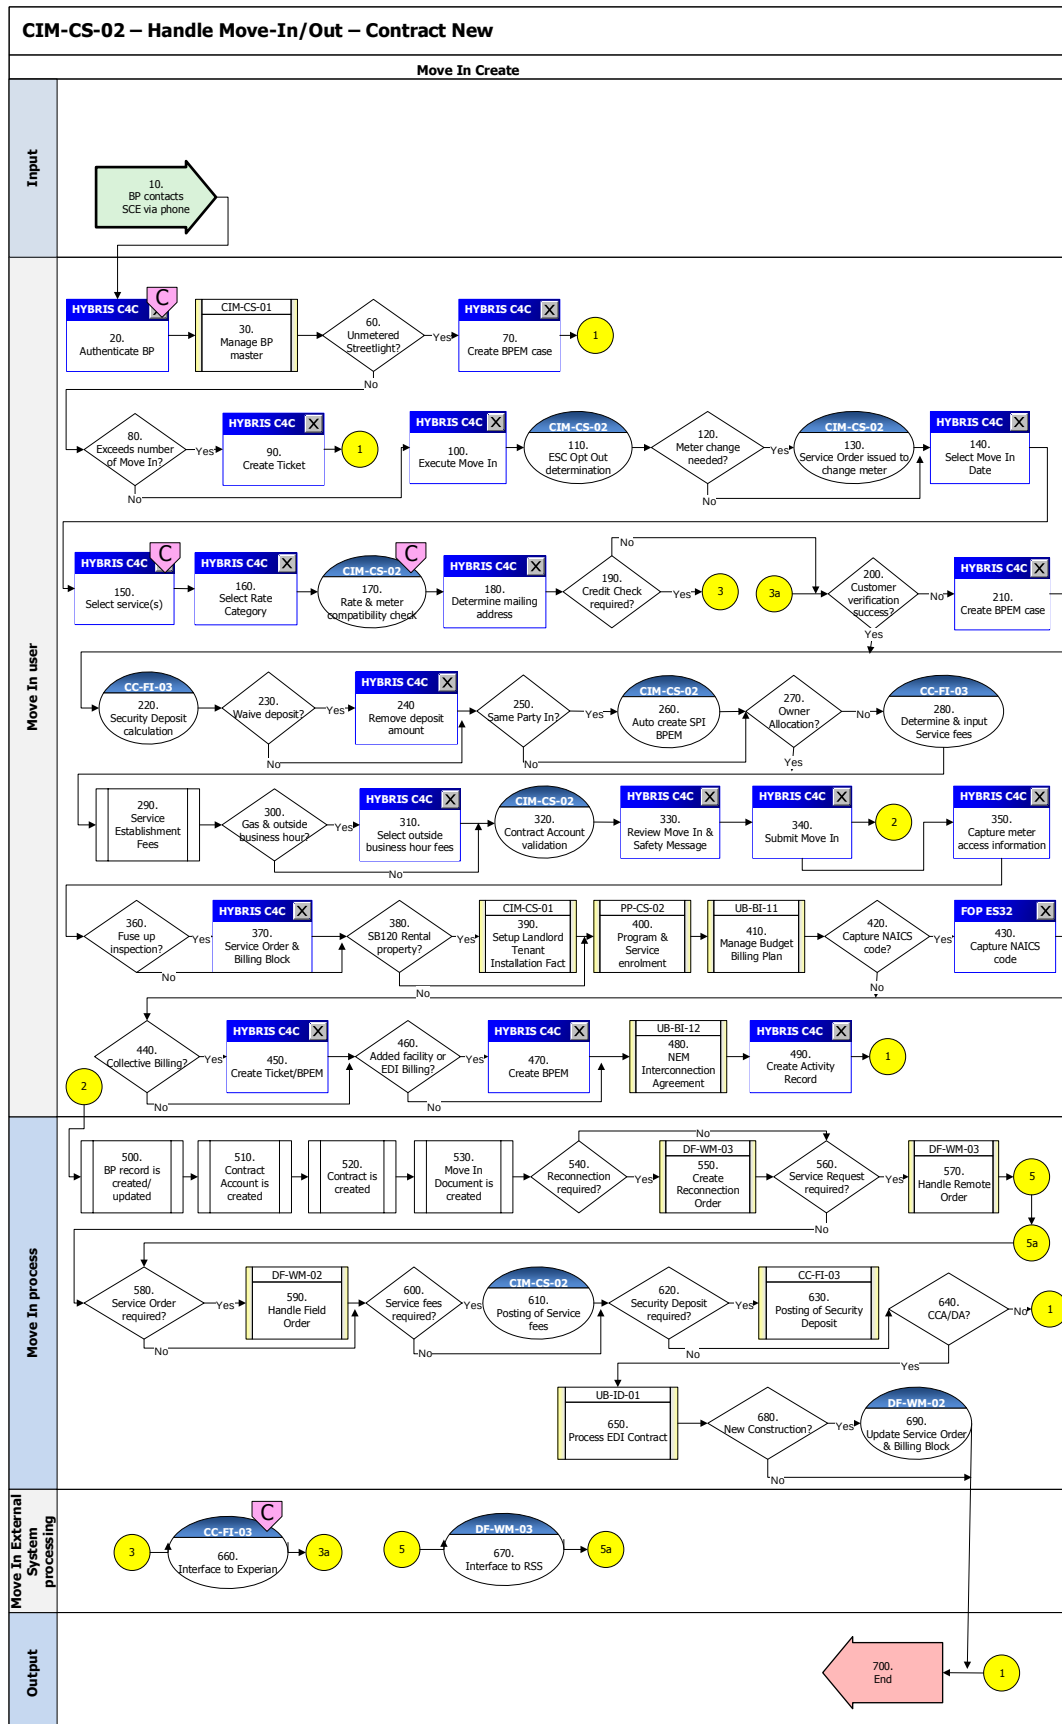

2.8 Process Flows

This BPD will cover 4 processes, including Move In creation, Move In Date Change, Rate Category Change and Move In Reversal. Each subsection where the process is detailed will have a process flow diagram for that process and a table detailing the steps that are taken within that process including processes handled outside of SAP.

1.1.33 Move In creation

This process describes the process of Move In.

2.8.1.1 *Process Flow Diagram*

2.8.1.2 Process Flow Steps

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
10	Customer contacts SCE via phone BP calls CCC or BCD to request for Move In.	N/A	N/A	
20	Authenticate BP Authenticate BP is authorized to request Move In.	Hybris C4C	Move In user	New
30	Manage BP master Create or update BP record if required.	Hybris C4C	Move In user	
60	Unmetered Streetlight? If Move in is for Unmetered Streetlight? Go to step 70. Otherwise, go to step 700.	Hybris C4C	Move In user	
70	Create BPEM case Create BPEM case manually.	Hybris C4C	Move In user	
80	Exceeds number of Move In? If user wants to request OLS to execute Move In, go to step 90. Otherwise, go to step 100.	Hybris C4C	Move In user	
90	Create Ticket Create a Ticket for OLS to create Move In.	Hybris C4C	Move In user	
100	Execute Move In Move In process is initiated.	Hybris C4C	Move In user	
110	ESC Opt Out determination Capturing ESC Opt Out request from customer.	Hybris C4C	Move In user	
110	Execute Move In Move In process is initiated.	Hybris C4C	Move In user	
120	Meter change needed? If meter required to be changed, go to step 130. Otherwise, go to step 140.	Hybris C4C	N/A	
130	Service Order issued to change meter Service Order will be created to change out the meter to smart meter	Hybris C4C	N/A	
140	Select Move In Date Choose a Move In date.	Hybris C4C	Move In user	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
150	Select Service(s) Select the services (electricity, gas, water, streetlight, added facility) for Move In.	Hybris C4C	Move In user	New
160	Select Rate Category Select a Rate Category.	Hybris C4C	Move In user	
170	Rate & meter compatibility check Validation on the selected is compatible with the meter.	Hybris C4C	N/A	New
180	Determine mailing address Option to capture new mailing address or use premise address as mailing address.	Hybris C4C	Move In user	
190	Credit Check required? If BP requires credit check, go to step 660. Otherwise, go to step 200.	Hybris C4C	Move In user	
200	Customer Verification success? If BP failed customer verification go to step 210. Otherwise, go to step 220.	Hybris C4C	Move In user	
210	Create BPEM case Create CVI BPEM case manually.	Hybris C4C	Move In user	
220	Security Deposit calculation Security Deposit amount is derived based on business rule. Commercial & Residential- auto populated with SAP 1902 release	Hybris C4C	N/A	
230	Waive Deposit? If Security Deposit is to be waived, go to step 240. Otherwise, go to step 250.	Hybris C4C	Move In user	
240	Remove Deposit amount Delete Security Deposit amount on the screen.	Hybris C4C	Move In user	
250	Same Party In? If SPI is found, go to step 260. Otherwise go to step 270.	Hybris C4C	N/A	
260	Auto create SPI BPEM case System creates a SPI BPEM case.	Hybris C4C	N/A	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
270	Owner Allocation? If Move In is Not Owner Allocation, go to step 280. Otherwise, go to step 290.	Hybris C4C	N/A	
280	Determine & input Service fees Determine the fees required for the Move In.	Hybris C4C	Move In user	
290	Service Establishment fees Service Establishment fees is required and defaulted on the screen.	Hybris C4C	N/A	
300	Gas & outside of business hour If Service type is Gas and Move In request is outside of business hour, go to step 310. Otherwise, go to step 320.	Hybris C4C	Move In user	
310	Select outside business hour fees System defaults fees for outside business hour.	Hybris C4C	Move In user	
320	Contract Account validation Validate Contract Account does not have mix Contract (Residential vs non-residential and CCA/DA opt out)	Hybris C4C	N/A	
330	Review Move In & Safety Message Review the information captured during Move In process and capture Safety Message acceptance before submitting the request.	Hybris C4C	Move In user	
340	Submit Move In Click Submit button to submit Move In. Go to step 350 and 500.	Hybris C4C	Move In user	
350	Capture meter access information Meter access information such as lock gate, bad dog is captured in Service Order long text.	Hybris C4C - Service Order	Move In user	
360	Fuse up inspection? If Fuse up inspection required, go to step 370. Otherwise go to step 380.	Hybris C4C	Move In user	
370	Service Order and Billing Block Cancel Service Order and update Billing Block for Contract.	Hybris C4C FOP (IW32) & Hybris C4C - LOCKS	Move In user	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
380	SB 120 Rental Property? If premise is a rental property, go to step 390. Otherwise go to step 400.	Hybris C4C	Move In user	
390	Setup Landlord Tenant Installation Fact Setup landlord tenant installation fact	Hybris C4C – FOP ES32	Move In user	
400	Program & Service enrolment Program & Service enrolment process	Hybris C4C – Billing Parameters	Move In user	
410	Manage Budget Billing Plan Budget Billing Plan is created.	Hybris C4C	Move In user	
420	Capture NAICS code? If NAICS code is required, go to step 430. Otherwise, go to step 440.	Hybris C4C	Move In user	
430	Capture NAICS code Capture NAICS code in Installation.	Hybris C4C FOP – ES32	Move In user	
440	Collective Billing? If Collective Billing setup is required, go to step 450. Otherwise, go to step 460.	Hybris C4C	Move In user	
450	Create Ticket/BPEM Create a Ticket.	Hybris C4C	Move In user	
460	Added facility or EDI Billing? If Move In includes Added Facility or EDI Billing, go to step 470. Otherwise, go to step 480.	Hybris C4C	Move In user	
470	Create BPEM Create BPEM case manually.	Hybris C4C	Move In user	
480	NEM Interconnection Agreement Handling of NEM Interconnection Agreement via UB-BI-12.	N/A	N/A	
490	Create Activity Create Activity manually documenting the interaction with customer.	Hybris C4C – Activity	Move In user	
500	BP record is created/updated BP record is created or updated.	BP	Move In process	
510	Contract Account is created Contract Account is created.	CAA1	Move In process	

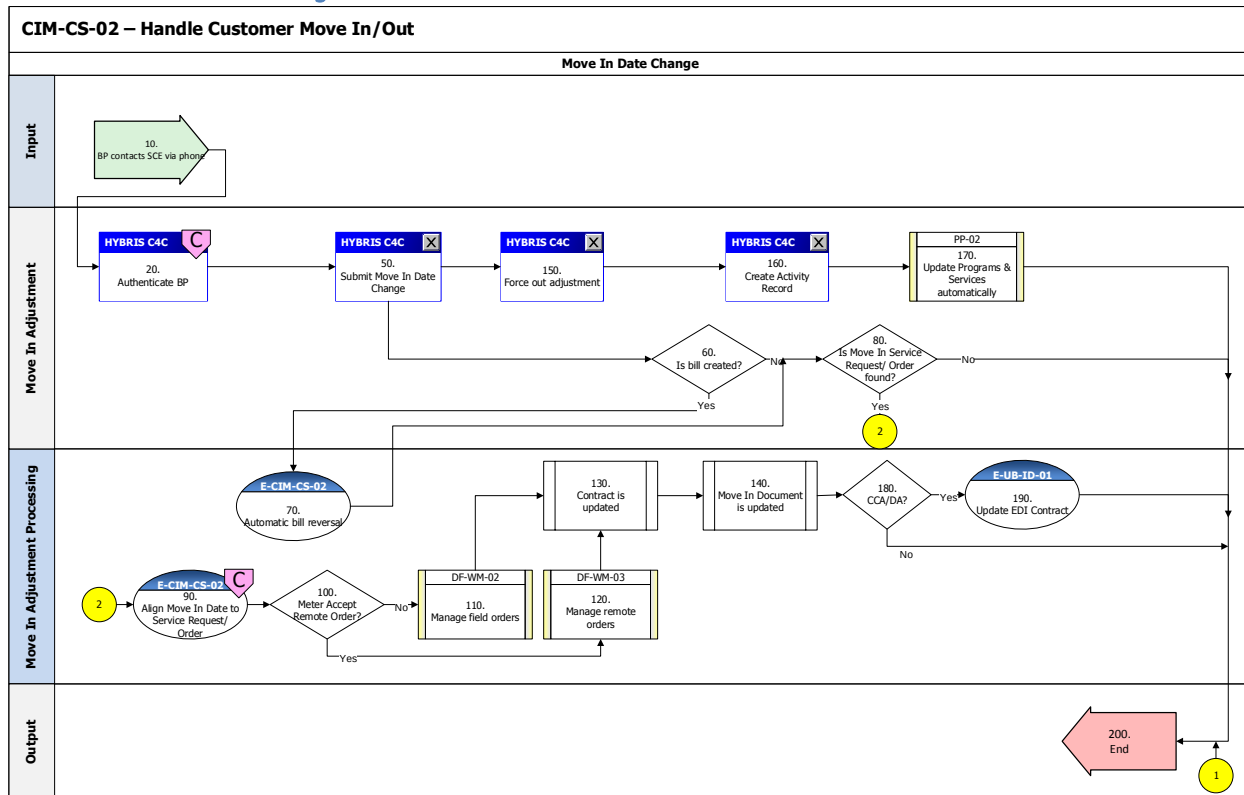

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
520	Contract is created Contract is created.	ES21	Move In process	
530	Move In Document is created Move In Document is created	EC50E	Move In process	
540	Reconnection is required? If reconnection is required, go to step 550. Otherwise, go to step 560.	N/A	Move In process	
550	Create Reconnection Order Create a Reconnection Order to connect the service.	EC86	Move In process	
560	Service Request required? If an initial read Service Request is required for smart meter, go to step 570. Otherwise, go to step 580.	S/4HANA	Move In process	
570	Handle Remote Order The process to handle remote order.	S/4HANA	Move In process	
580	Service Order required? If an initial read Service Order is required for non-smart meter, go to step 590. Otherwise, go to step 600.	S/4HANA	Move In process	
590	Handle Field Order The process to handle Field Order.	S/4HANA	Move In process	
600	Service fees required? If Service fees are required, go to step 610. Otherwise, go to step 620.	S/4HAHA	Move In process	
610	Posting of Service fees Service fees are posted to BP account.	FPE1	Move In process	
620	Security Deposit required? If Security Deposit is required, go to step 630. Otherwise go to step 640.	S/4HAHA	Move In process	
630	Posting of Security Deposit Deposit is posted to BP account.	FPSEC1	Move In process	
640	CCA/DA? If Move In is CCA/DA, go to step 650. Otherwise go to step 700.	S/4HANA	Move In process	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
650	Process EDI Contract Establish EDI Contract with CCA/DA via UB-ID-01 using IDEX Master Data Template.	S/4HANA	Move In process	
660	Interface with Experian. Interface with Experian to get the credit score of BP.	Experian	Move In External System processing	CONTROL-SOX-3281
670	Interface to RSS Interface to RSS to obtain initial read.	RSS	Move In External System processing	
680	New Construction? If Move In is for new construction, go to step 690. Otherwise, go to step 700.	S/4HANA	Move In process	
690	Update Service Order & Billing Block Update Service Order status to 'Release' and update Billing Block.	S/4HANA	Move In process	
700	End			

1.1.34 Move In Date Change

This process describes the process of Move In Date Change.

2.8.1.3 Process Flow Diagram

2.8.1.4 Process Flow Steps

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
10	BP contacts SCE via phone BP calls CCC or BCD to request for Move In Date change.	N/A	N/A	
20	Authenticate BP Authenticate BP is authorized with the request.	Hybris C4C	Move In Adjustment User	New
50	Submit Move In Date Change User execute Move In Date Change functionality. Go to step 60 and 150.	Hybris C4C	Move In Adjustment User	
60	Is bill created? If bill is created for the contract, go to step 70. Otherwise, go to step 80.	N/A	N/A	

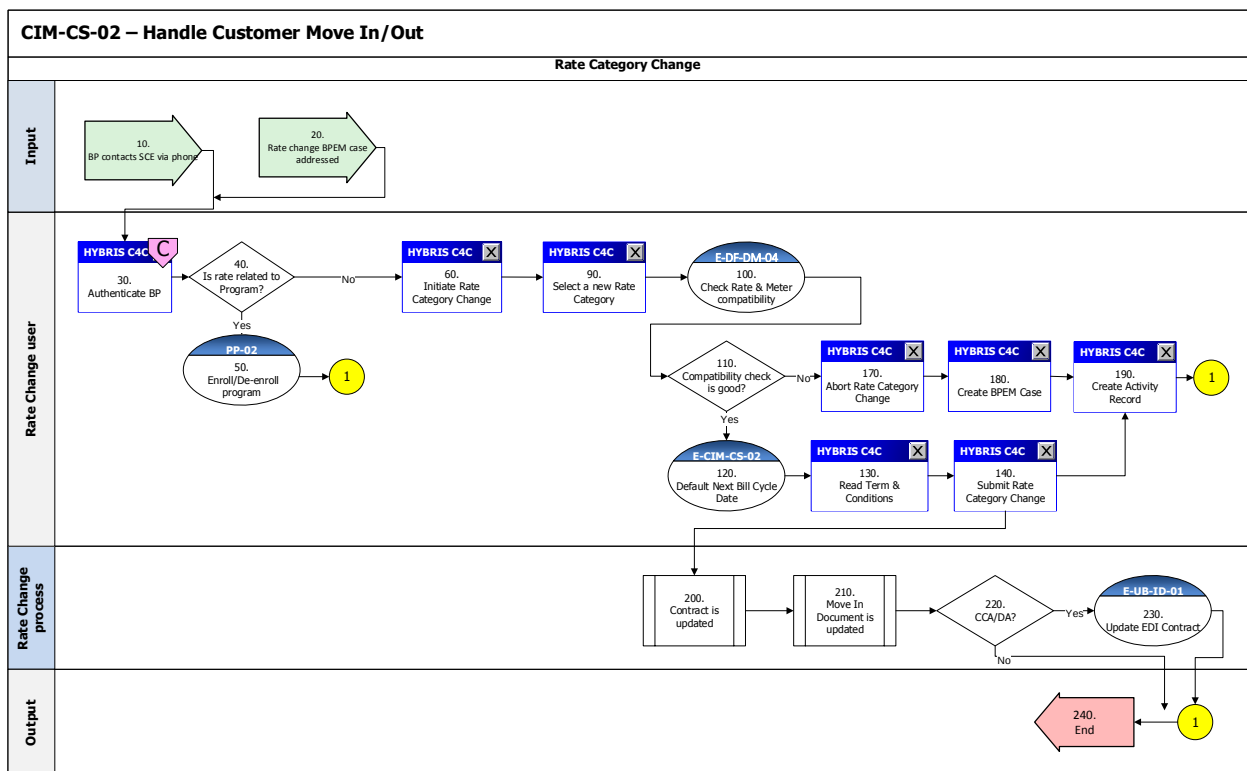

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
70	Automatic bill reversal Bills are automatically reversed via enhancement.	EA20	Move In Adjustment Processing	
80	Is Move In Service Request / Service Order found? If Move In Service Request / Service Order found, go to step 90. Otherwise, go to step 200.	N/A	N/A	
90	Align Move In Date to Service Request / Service Order Enhancement to update new Move In Date to Service request / Service Order.	S/4HANA	Move In Adjustment Processing	
100	Meter accepts remote order? If meter is a smart meter, go to step 90. Otherwise go to step 80.	N/A	N/A	
110	Manage Field Orders DF-WM-02 process handles process after Service Order start date is updated.	S/4HANA	N/A	
120	Manage Remote Orders DF-WM-03 process updates Service Request to RSS.	S/4HANA	N/A	
130	Contract is updated New Move In Date is updated to Contract.	S/4HANA	Move In Adjustment Processing	
140	Move In Document is updated New Move In Date is updated to Move In Document	S/4HANA	Move In Adjustment Processing	
150	Force Out Adjustment User updates Forced Out Contract's Move Out date if needed. See CIM-CS-03 Handle Customer Move-in/Out – Contract End	Hybris C4C	Move In Adjustment User	
160	Create Activity Record User creates an Activity Record documenting the information in the long text	Hybris C4C	Move In Adjustment User	
170	Update Programs & Services Programs & Services are updated automatically by system	Hybris C4C	Move In Adjustment Processing	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
180	CCA/DA? If Contract is CCA/DA, go to step 190. Otherwise go to step 200.	S/4HANA	Move In Adjustment Processing	
190	Update EDI Contract A maintenance request is sent to CCA/DA for the date change.	S/4HANA	Move In Adjustment Processing	
200	End	N/A	N/A	

1.1.35 Rate Category Change

This process describes the process of Rate Category Change

2.8.1.5 Process Flow Diagram

2.8.1.6 Process Flow Steps

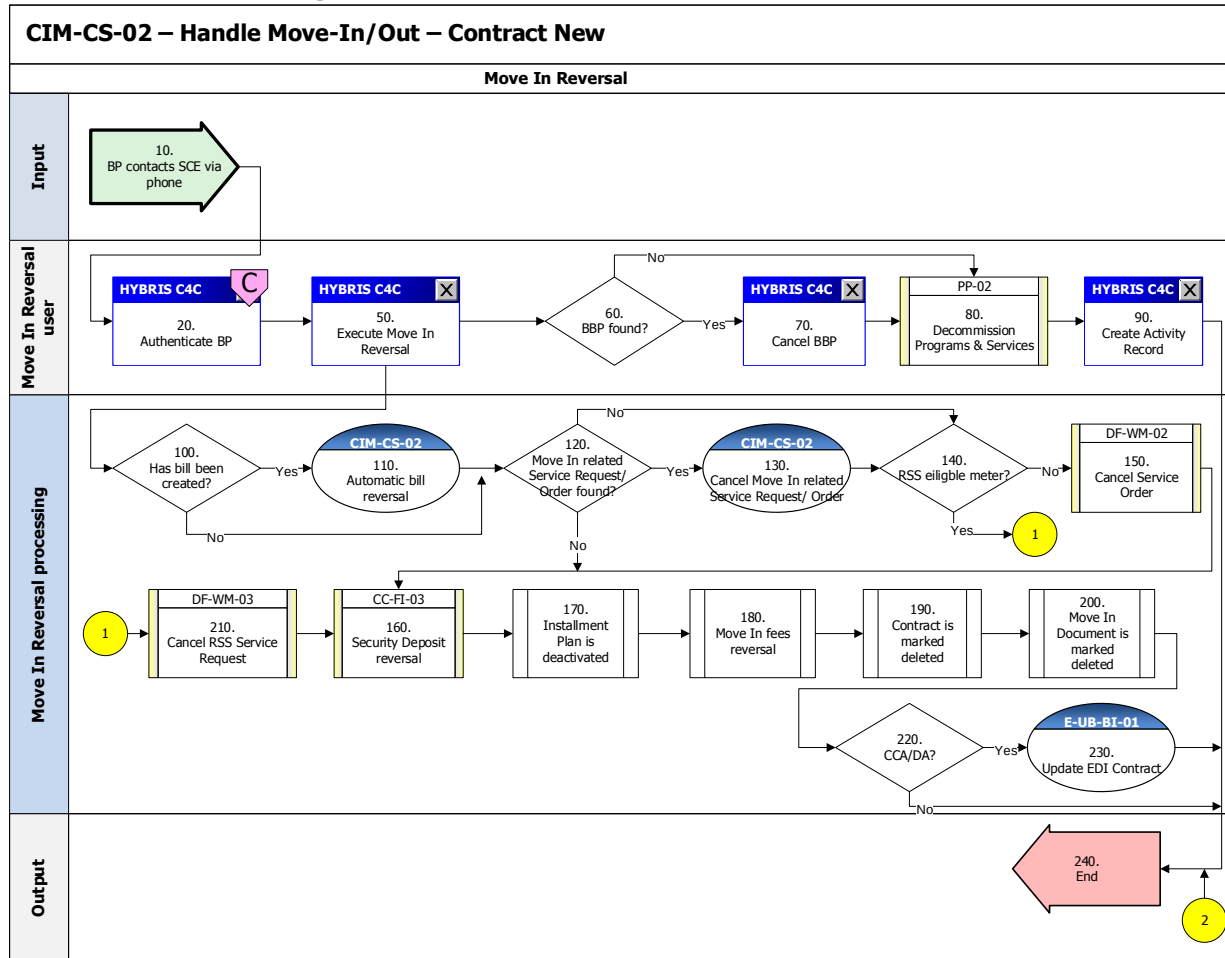

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
10	BP contacts SCE via phone BP calls CCC/BCD.	N/A	N/A	
20	Rate Change BPEM Case addressed Service Order to replace meter is completed and ready to perform Rate Change in SAP.	N/A	N/A	
30	Authenticate BP Authenticate BP in the system.	Hybris C4C	Rate Change user	New
40	Is Rate related to programs? If Rate is related to program, go to step 50. Otherwise, go to step 60.	Hybris C4C	N/A	
50	Enroll/De-enroll programs PP02 process handles changes to programs automatically. Go to step 240.	Hybris C4C	N/A	
60	Initiate Rate Category Change User executes Rate Category Change functionality.	Hybris C4C	Rate Change user	
90	Select a new Rate Category User selects a new Rate Category from the drop down list field.	Hybris C4C	Rate Change user	
100	Check Rate and Meter compatibility. Enhancement to check rate selected is compatible with meter.	Hybris C4C	N/A	
110	Compatibility check is good? If rate selected is compatible with meter, go to step 120. Otherwise, go to step 170.	Hybris C4C	N/A	
120	Default next bill cycle date Enhancement that defaults next schedule bill date for new rate to take effective.	N/A	N/A	
130	Read Term & Condition Term & Condition for Rate Category Change is read to the BP.	Hybris C4C	Rate Change user	
140	Submit Rate Category Change User submits Rate Category Change. System proceeds to step 200.	Hybris C4C	Rate Change user	
170	Abort Rate Category Change User exit from Rate Category Change functionality.	Hybris C4C	Rate Change user	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
180	Create BPEM Case A BPEM case category 'Rate Category Change Request' is created. Service Order is link to the BPEM case.	Hybris C4C	Rate Change user	
190	Create Activity Record An Activity Record is created and information is documented in the long text. Proceed to step 240	Hybris C4C	Rate Change user	
200	Contract is updated Contract is updated with the new Rate information.	ES22	Rate Change process	
210	Move In document is updated Move In document is updated with new Rate information.	EC51E	Rate Change process	
220	CCA/DA? If Contract is CCA/DA, go to step 230. Otherwise go to step 240.	S/4HANA	Rate Change process	
230	Update EDI Contract A maintenance request is sent to CCA/DA for the rate change.	S/4HANA	Rate Change process	
240	End			

1.1.36 Move In Reversal

This process flow describes the process of Move In Reversal and the related activities.

2.8.1.7 Process Flow Diagram

2.8.1.8 Process Flow Steps

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
10	BP contacts SCE via phone. BP calls SCE to request to Move In Reversal	N/A	N/A	
20	Authenticate BP Authenticate BP information	Hybris C4C	Reverse Move In user	New
50	Execute Move In Reversal User executes Move In Reversal functionality	Hybris C4C	Move In Reversal user	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
60	BBP found? If BBP is created for the Contract, go to step 70. Otherwise go to step 80.	Hybris C4C	Move In Reversal user	
70	Cancel BBP Cancel the BBP manually.	Hybris C4C	Move In Reversal user	
80	Decommission Program & Services Program & Services that BP enrolled at the time of Move In process will be decommission by system automatically	Hybris C4C	Move In Reversal user	
90	Create Activity Record An Activity Record is created and information is documented in the long text.	Hybris C4C	Move In Reversal user	
100	Has bill been created? If bill is created for the Contract, go to step 40. Otherwise go to step 50.	S/4HANA	Move In Reversal processing	
110	Automatic bill reversal Enhancement to have bill(s) for the contract automatically reverse.	EA20	Move In Reversal processing	
120	Move In related Service Request/ Order found? If Service Request or Service Order created by Move In process, go to step 130. Otherwise go to step 160.	S/4HANA	Move In Reversal processing	
130	Cancel Move In related Service Request/Order. Service Request and Service Order status is canceled.	S/4HANA	Move In Reversal processing	
140	RSS eligible meter? If meter is a RSS eligible, go to step 210. Otherwise, go to step 150.	S/4HANA	Move In Reversal processing	
150	Cancel Service Order Service Order is canceled.	S/4HANA	Move In Reversal processing	
160	Security Deposit Reversal Security Deposit is reverse and refund to the BP.	S/4HANA	Move In Reversal processing	

Step	Description of Step	Hybris C4C/ T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
170	Installment Plan deactivation Installment Plan is deactivated.	S/4HANA	Move In Reversal processing	
180	Move In fees reversal Move In fees is reversed.	S/4HANA	Move In Reversal processing	
190	Contract is marked deleted Contract is updated with deletion flag.	S/4HANA	Move In Reversal processing	
200	Move In Document is marked deleted Move In Document is updated with deletion flag.	S/4HANA	Move In Reversal processing	
210	Cancel RSS Service Request A cancel Service Request is sent to RSS.	S/4HANA	Move In Reversal processing	
220	CCA/DA? If Contract is CCA/DA, go to step 230. Otherwise go to step 240.	S/4HANA	Move In Reversal processing	
230	Update EDI Contract A maintenance request is sent to CCA/DA for the cancellation.	S/4HANA	Move In Reversal processing	
240	End			

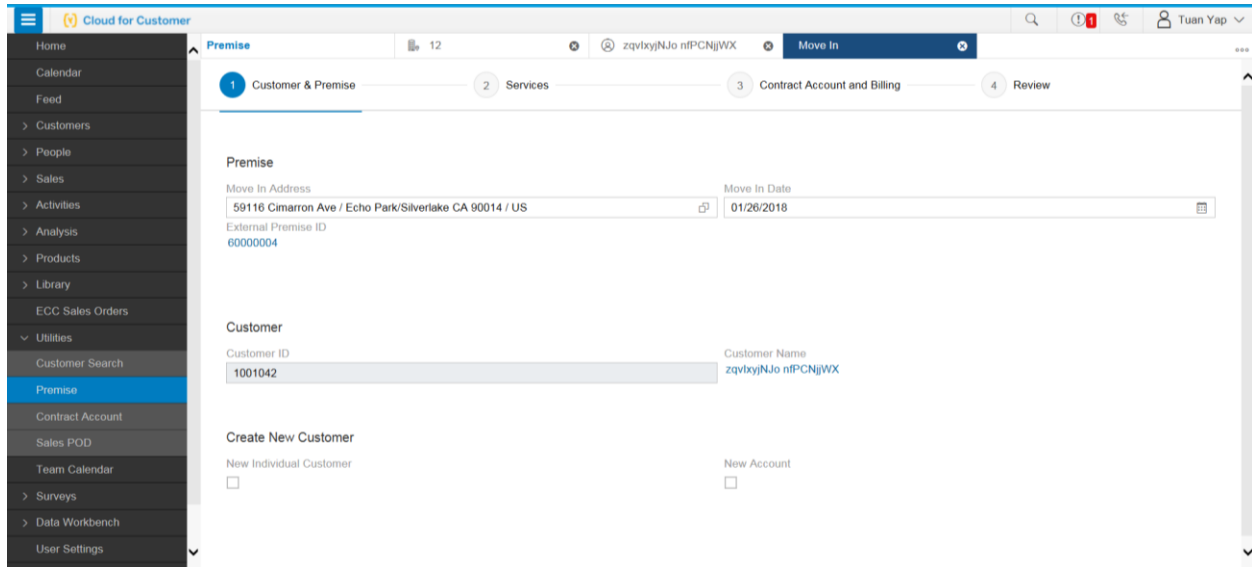

2.9 3rd Party and SCE Legacy System Integrations

3 rd Party or SCE Legacy System Integration	Description of Integration and Required Change to 3 rd Party or SCE Legacy System	Estimated Complexity of 3 rd Party or SCE Legacy system change
Experian	Integration to Experian for Credit Check. This will be done via <i>CC-FI-03 – Manage Credit – Manage Security Deposit</i>	N/A
RSS	Integration to RSS for Move In Service Request. This will be done via <i>DF-WM-03 - Handle Remote Orders - Manage Remote Orders</i>	N/A
SCE.COM	Integration from SCE.COM to submit Move In request (Move In Adjustment and Reversal request are future opportunities for SCE.com).	N/A

2.10 Data Elements

The information that will be captured for the Move In, Move In Adjustment and Move In Reversal (either as part of migration or in the course of normal processing) will be defined as the intend of use for this BPD.

1.1.37 Move In Creation

The following data elements will be used by the Move In – Customer & Premise.

Field	Type	Comments
Move In Address	Required	Premise for the Move In location, search and select from drop down option
Move In Date	Required	Contract start date
Customer Id	Required	BP number, search and select from drop down option
New Individual Customer	Optional	New Residential BP will be created when checkbox is selected
New Account	Optional	New Commercial BP will be created when checkbox is selected

The following data elements will be used by the Move In – Service.

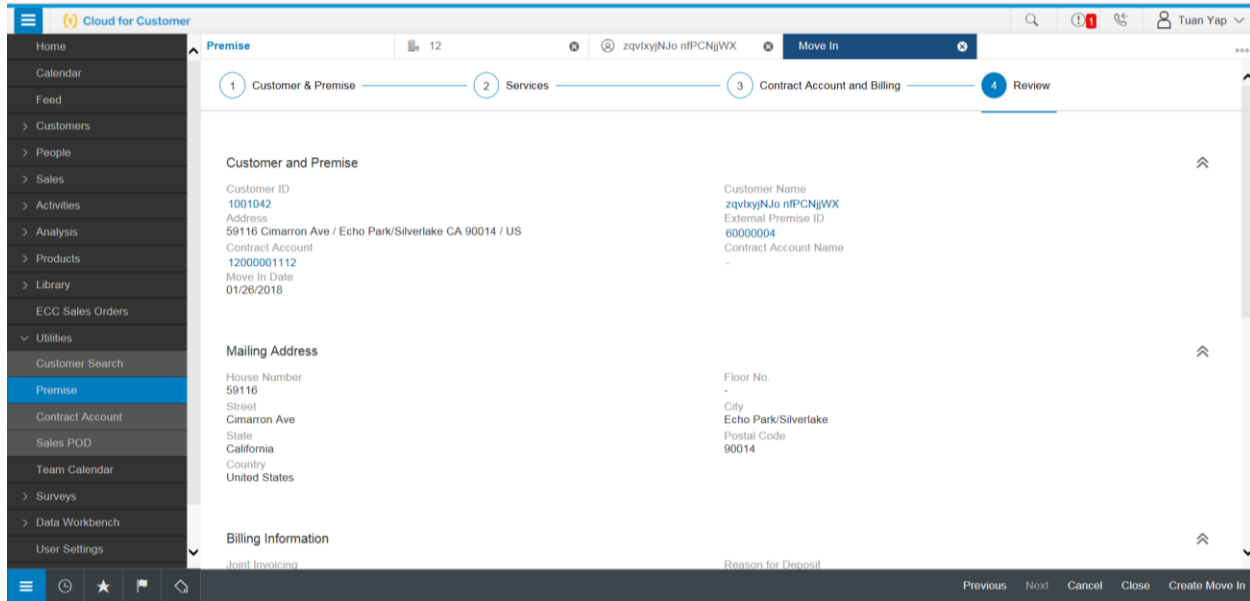

Field	Type	Comments
Select Service	Required	Selection checkbox for services (electric, water, gas, residential streetlight)
Rate Category	Required	Rate category for the Move In, select and search from drop down list
ESC Opt Out	Optional	Selection checkbox for Opt Out of Smart meter
Deleted	Display	Checkbox is checked if Installation is marked deactivated
Create Service Order	Optional	Selection checkbox for Smart Connect meter Service Request or non-Smart Connect meter Service Order creation
Description	Optional	Description that will be updated to Service Request or Service Order
Meter Reading	Optional	Customer meter read. Not application to SCE.

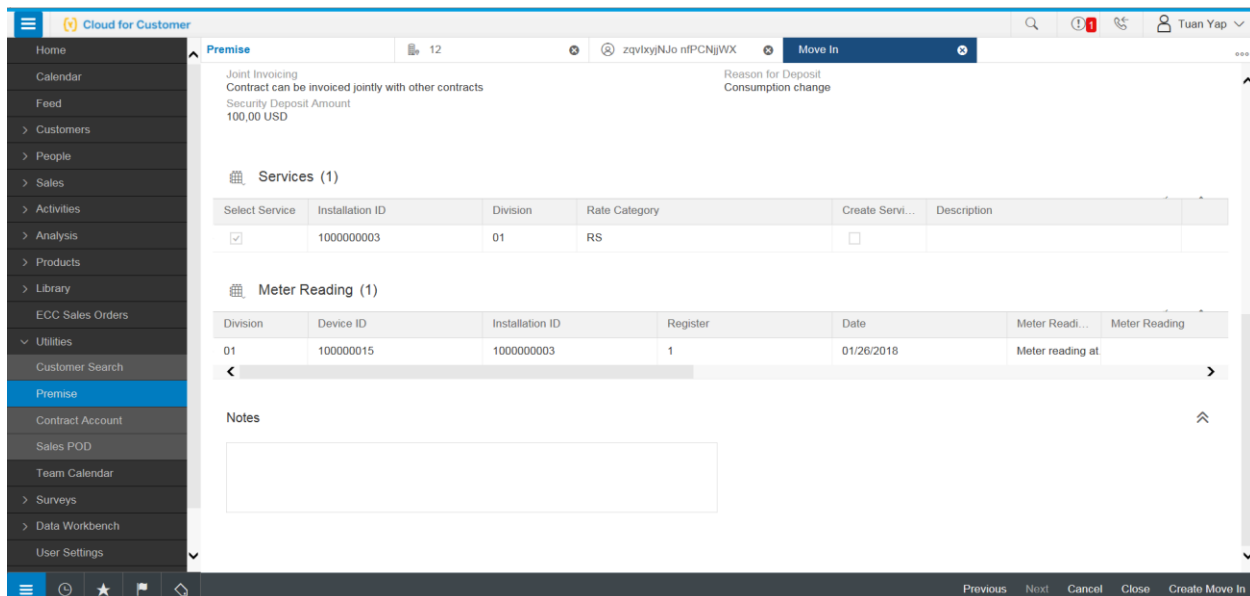

The following data elements will be used by the Move In – Customer & Premise.

Field	Type	Comments
Contract Account ID	Required	Contract Account number, auto defaulted if CA is selected prior initiating Move In process
Joint Invoicing	Required	Joint invoicing option, always default to “Contract can be invoiced jointly with other contracts.”
Reason for Deposit	Optional	BP number, search and select from drop down option
Security Deposit Amount	Optional	Security Deposit Amount

Field	Type	Comments
Same as Move In Address	Optional	Premise address is defaulted in the mailing address fields if checkbox is selected
Notes – Add new note	Optional	Long text field

The screenshot shows the 'Move In' process in the 'Cloud for Customer' application. The interface includes a sidebar with navigation options like Home, Calendar, Feed, Customers, People, Sales, Activities, Analysis, Products, Library, ECC Sales Orders, Utilities, Customer Search, and Premise. The main content area displays the 'Review' step of the process, which includes sections for Customer and Premise information, Mailing Address, and Billing Information. The Customer and Premise section shows details like Customer ID (1001042), Address (59116 Cimarron Ave / Echo Park/Silverlake CA 90014 / US), Contract Account (12000001112), and Move In Date (01/26/2018). The Mailing Address section shows House Number (59116), Street (Cimarron Ave), State (California), Country (United States), Floor No. (-), City (Echo Park/Silverlake), and Postal Code (90014). The Billing Information section shows Joint Invoicing and Reason for Deposit (Consumption change). The bottom of the screen has navigation buttons: Previous, Next, Cancel, Close, and Create Move In.

The screenshot shows the 'Move In' process in the 'Cloud for Customer' application, specifically the 'Review' step. The interface includes a sidebar with navigation options like Home, Calendar, Feed, Customers, People, Sales, Activities, Analysis, Products, Library, ECC Sales Orders, Utilities, Customer Search, and Premise. The main content area displays the 'Review' step, which includes sections for Joint Invoicing, Services, Meter Reading, and Notes. The Joint Invoicing section shows a message: 'Contract can be invoiced jointly with other contracts' and 'Security Deposit Amount 100,00 USD'. The Services section shows a table with columns: Select Service, Installation ID, Division, Rate Category, Create Servi..., and Description. The Meter Reading section shows a table with columns: Division, Device ID, Installation ID, Register, Date, Meter Read..., and Meter Reading. The Notes section shows a text area for adding notes. The bottom of the screen has navigation buttons: Previous, Next, Cancel, Close, and Create Move In.

The following data elements will be used by the Move In – Review.

Field	Type	Comments
Customer and Premise	Display	BP number & name Premise address Contract Account number Move In date
Mailing Address	Display	Mailing address information
Billing Information	Display	Joint Invoicing Security Deposit Amount Security Deposit Request reason
Services	Display	Installation number Rate Category Service Order information
Meter Reading	Display	For non-smart connect meters (register meter)
Notes	Display	Long text

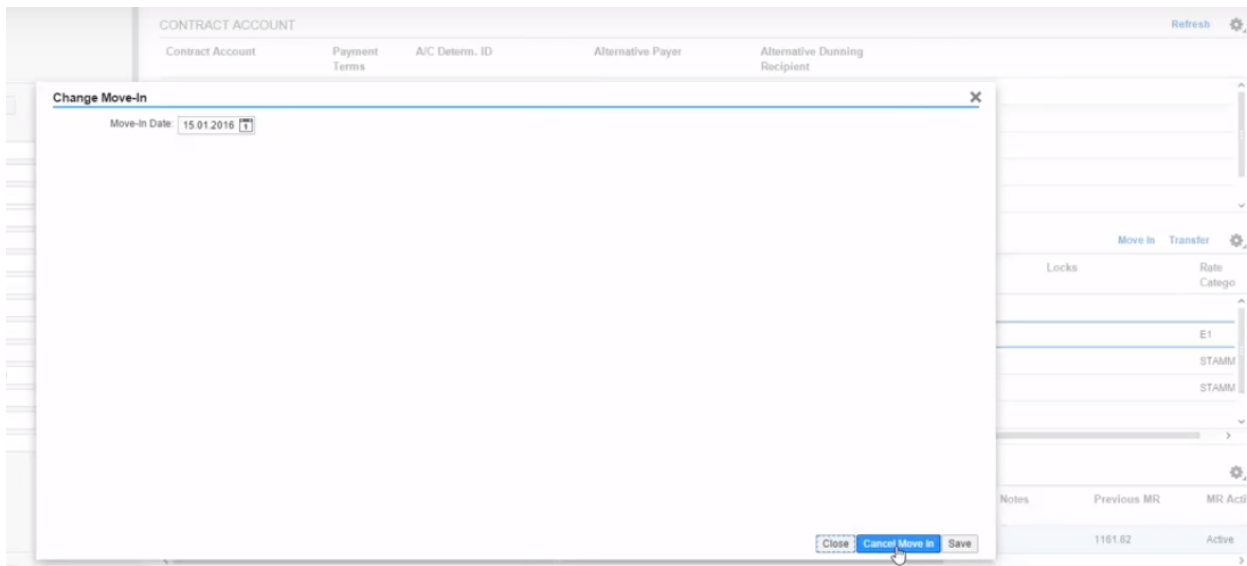

1.1.38 Move In Adjustment

Contract is located and select Change Move In option.

Contract Account ID	Contract ID	Service Address	Installation	Division	Move-In Date	Move-Out Date	Locks	Move In	Transfer	
1093627								Move Out		
1093627	13596	16 Jeffrey Jackson Street 16 Palo Alto ...	11482	Electricity	15.01.2016	Unlimited		Change Move In		
								Create Meter Reading		

Enter new Move In Date.

CONTRACT ACCOUNT

Contract Account Payment Terms A/C Determ. ID Alternative Payer Alternative Dunning Recipient

Change Move-In

Move-In Date: 15.01.2016

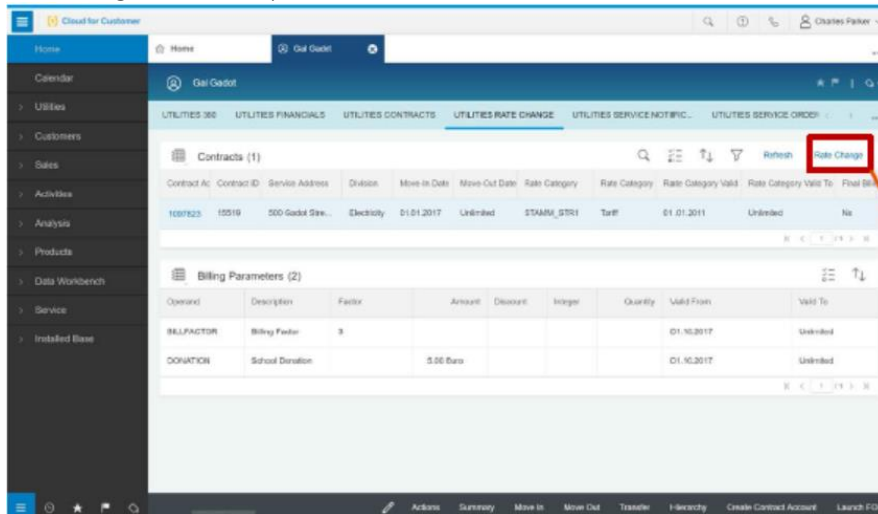

Close Cancel Move In Save

The following data elements will be used by the Move In Date Change.

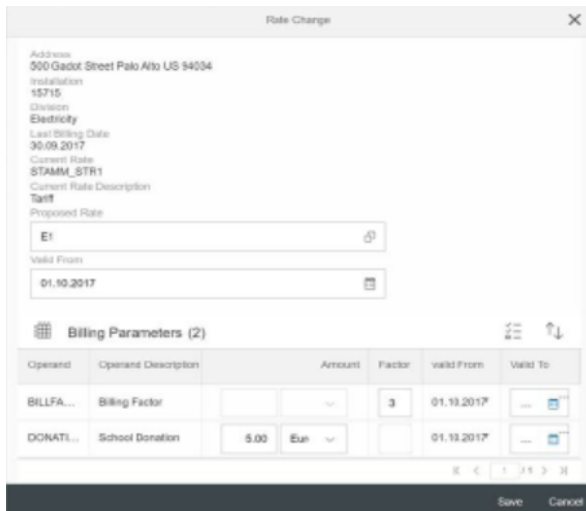

Field	Type	Comments
Move In Date	Required	New Move In Date
Save	Required	New Move In Date is updated when button is click

1.1.39 Rate Category Change

Rate Change functionality can be selected when the Contract is located.

When the Rate Change is selected, the Propose Rate and Valid From fields are shown in a new view.

The following data elements will be used by the Rate Category Change.

Field	Type	Comments
Proposed Rate	Required	New Rate Category to be selected. Selection is available in dropdown list

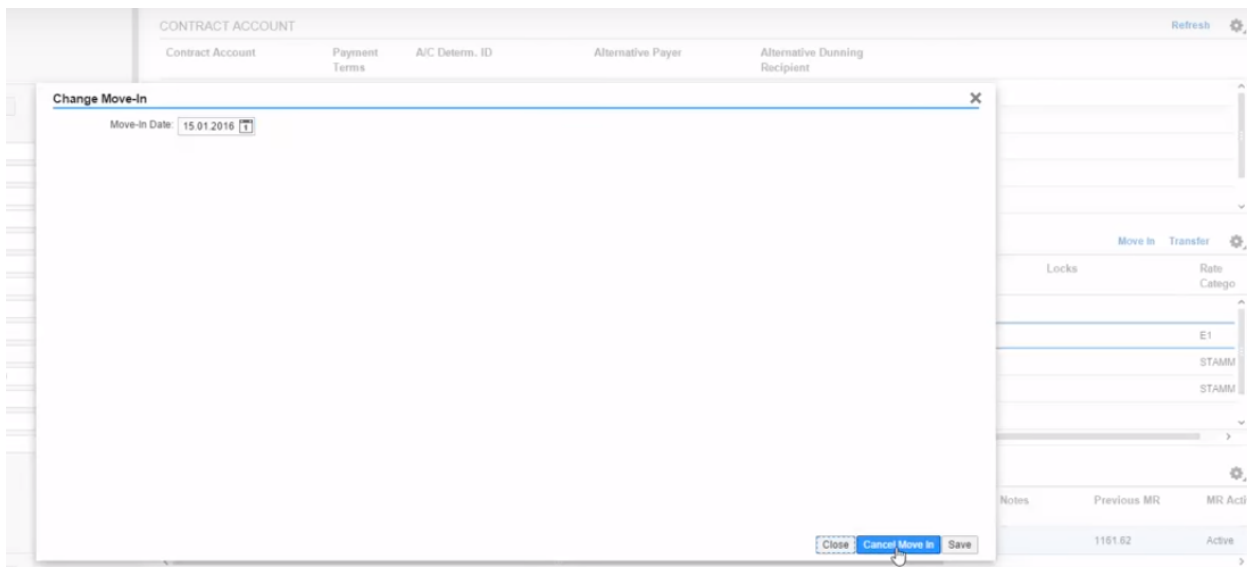

Field	Type	Comments
Valid From	Required	New Rate Category effective date

1.1.40 Move In Reversal

Contract is located and select Change Move In option.

The screenshot shows a table with columns: Contract Account ID, Contract ID, Service Address, Installation, Division, Move-In Date, Move-Out Date, and Locks. A row is selected with Contract ID 1093627. A context menu is open over the 'Locks' column, showing options: Move In, Transfer, Move Out, Change Move In (highlighted), and Create Meter Reading.

The screenshot shows a 'Change Move-In' dialog box. It has a 'Move-In Date' field with a calendar icon and the date '15.01.2016'. At the bottom right, there are three buttons: 'Close', 'Cancel Move In' (highlighted), and 'Save'.

The following data elements will be used by the Move In Reversal.

Field	Type	Comments
Move In Date	Required	Move In date of the Contract
Cancel Move In button	Required	Move In will be reversed when button is click

1.1.41 Source Systems and Data Volumes

Number of Move In (Turn On) in legacy system last 3 years are as below:

2015	2016	2017
1,200,741	1,183,764	1,178,469

2.11 Cloud for Customer (Hybris C4C) Integration

1.1.42 Processes

- Move In creation for residential and non-residential BP. Processes for Move In includes:
 - Search for BP, Contract Account and Premise
 - Create new BP
 - Create new Contract Account
- Move In date adjustment which includes Move In Date change and Rate change. Contract needs to be located in Hybris C4C when initiating these processes.
- Move In reversal. Contract needs to be located in Hybris C4C when initiating this process.

1.1.43 Hybris C4C Views

- Move in creation view
- Move In Date change view
- Rate Category change view
- Move in Reversal view
- BP master view
- Contract Account view

1.1.44 Activity Records

An Activity Record will be created by User manually whenever there is a Move In request regardless if the Move In is completed by User or rejected by User. The content that captures in the Activity Record's long text varies in different Move In scenarios. The Move In Activity Record's long text content may contain for example:

- Service fees
- Security Deposit waived
- Authorized caller requesting Move In on behalf of BP
- City Inspection required
- Customer verification inspection required
- Safety message
- Premise is tenant occupied
- New Construction

A Move In Activity Record can be created by system automatically when a Move In is completed. The Activity Record can be created by:

- Owner Allocation Workflow

- SCE.COM

An Activity Record will be created by the user manually for Move In Date change, Rate Category change and Move In Reversal request that was initiated via phone call.

2.12 Exception Management Requirements

This section outlines a high level description of each BPEM Case or other user workflow items (such as “Tickets” used by Front Office) used to route work requests between business areas. The companion document for this section which outlines the detail of each case is documented in APSE on the [Exception Case Template General Document #8](#).

User Exception Scenario / Description	User Group	Initiated by	Work Distribution
See attached document			

2.13 Process Risks and Mitigation

Risk Statement	Mitigation
To Identify if BP requesting Move In has outstanding balance or committed fraud can be achieved using duplicate BP check and credit check.	User can navigate to Account Balance view, Dunning or Activity view to determine.
Duplicate BP checks is carried out during BP creation, User is able to review the payment history of the duplicate BP that prompted by Hybris C4C.	Duplicate BP checks is done and documented in detail in CIM-CS-01 Business Partner.
Credit check is carried out during Security Deposit calculation.	Experian is able to provide a credit rating based on BP’s credit history and the credit rating will be used by FI to calculate Security Deposit amount.
If an existing BP is not located during the move in process a duplicate BP may be created through user error.	Training on how to search for BP with several methods (partial Name + e-mail address / phone number / SSN / DL Number / Tax ID) to reduce the likelihood of creating a duplicate BP.
If a user is not able to locate the premise to be moved in, the user may not be able to complete the move in process.	User will search for the location using the address. Search requirements were documented in Manage BP.
If the BP has multiple Contract Accounts, the user may not correctly identify the correct Contract Account to complete the move in process.	Customer needs to confirm which Contract Account to be used for Move In. If the user moves in a BP at an incorrect premise, the former BP would be moved out in error. Mitigation: Data can be corrected using Move In reversal followed by Move Out reversal.

Risk Statement	Mitigation
During a Move in, the Product (formerly Rate) is automatically pre populated with the product of the former BP. If the user does not validate that the defaulted product is correct for the new BP, the New BP may be billed incorrectly.	Ensure the user confirms the rate with the new BP.
During a move in, the BP may have the program from their former premise (CARE / FERA/ Medical Baseline / CPP / SDP etc.) carried forward to the new Contract in error.	The user should confirm all programs the BP will participate in at the new location.
Move in for Assigned Organization BP, may have the incorrect mailing address (site or local address vs. Corporate office) added for their Contract Accounts / Contracts during the move in process. The Org BP may not receive their bills, causing dunning to take effect.	Ensure the correct mailing address is added for assigned Organization Business Partners.
If a city inspection is required for move in, and the user does not verify this has occurred, the move in may be processed without the inspection.	User to validate that the city inspection has occurred and attached the inspection report to the Premise.
If the Move In process has a force out, when Move In is reversed, the forced out Contract will be NOT be reinstated.	The User shall create a Move in for the Moved out BP after reviewing the account if it is determined that the Moved out BP should still be active at the premise. The User may need to call / email the Moved out BP for confirmation.
If the user during the Move in process determines to minimize or waive the deposit for the customer, there will NOT be any rules to prevent the amount from being minimized or zeroed out.	The user shall create an Activity for Deposit Waived and add a sub-category for the Reason the deposit was waived. The Credit team and other impacted stakeholders can monitor user's actions through a report of all Activities.

2.14 Key Performance Indicators

The following have been identified as KPI's at Southern California Edison, along with the means of measuring each KPI and the current measurement statistic for each KPI:

Measured KPI	Description	Measurement Method	Current Statistic

1.1.45 Key Metric Definition

The following have been identified as key metrics at Southern California Edison that require business rule for calculation:

Key Metric	Description	Business Rule	Reference
N/A			

Key Metric	Description	Business Rule	Reference

2.15 Controls, Regulatory Rules, and Security

Requirement ID (from RTM)	"As-Is" Control Requirement	"To Be" Risk Statement	"To-Be" Control Activity"	Control Automation (manual, IT dependent-manual, automated)	Relevant technical identifier or RICEFW reference
CONTROL-SOX-3281	Eligible charges are not billed (fraud).	Inappropriate monitoring of past-due customer billings may lead to uncollectible Accounts Receivable or write-offs.	If credit check fails, no move-in is finalized before the credit team performs and successfully validates a customer verification investigation. Resolution of the customer investigation result is described in an activity record.	Manual	N/A
CONTROL-CS-1193 moved to PP-CS-04	Dependable G.....	N/A	If the Filter R.....	N/A	N/A

NEW: CONTROL- ZZZ-5048	N/A	Inaccurate or incomplete business master data may lead to bad debt increase or revenue loss.	(Same control than in CIM-CS-03) Office Support reviews on a weekly basis Master Data Template errors related to create/update business partner, create/update contract account, and residential and non-residential customer move-in/move-out using transaction ECRMREPL in SAP ISU to ensure no error is blocking the creation/update of the business partner, the contract account or the move-in and move-out document. An action plan is detailed in the review for each error older than 2 business days. (Recommend Step 450)	ITDM	NA
------------------------------	-----	--	--	------	----

New CONTROL- ZZZ-5049	NA	Inappropriate meter device install or calibration may lead to incorrect usage data being processed	(Same control than in CIM-CS-03) At the time of move-in, move-out, or transfer, SAP ISU triggers a Remote Service Switch (RSS) request if installation has a Smart Meter. A Service Order is triggered if the installation does not have a Smart Meter or if it consists in a disconnecting or reconnecting of service.	ITAC (IT Automated Control)	E-CIM-CS-02 <i>Create Work Order during Move-In/Move-Out/Transfer</i>
-----------------------------	----	--	--	-----------------------------	--

New: CONTROL- ZZZ-5059	N/A	Inaccurate or incomplete business master data may lead to bad debt increase or revenue loss. (Inaccurate or incomplete validation process with regard to recognition of business partners and 3rd party information may lead to revenue loss or fraudulent activities.)	The front-office user (CCC/BCD Organizations) validates customer information (full customer name, and full address or contract account number or contract number for move-out, and Social Security Number (required for residential), Driver License and Tax ID for Move-out or Update Activity) before processing any action and the request is processed only if requester is the seller or sold-to party business partner, a person who has been defined as authorized by the sold-to-party business partner (e.g. authorized contact relationship to the business partner) or documentation exists for authorizing the requester has been obtained (e.g. business partner becomes deceased and caller is the executor or has a power of attorney for the business partner).	Manual	N/A
------------------------------	-----	--	---	--------	-----

New CONTROL- ZZZ-5058	N/A	Inaccurate or incomplete business master data may lead to bad debt increase or revenue loss. (Inaccurate or incomplete validation process with regard to recognition of business partners and 3rd party information may lead to revenue loss or fraudulent activities.)	The Quality Assurance team (CCC Organization) listens and scores on a monthly basis 5 calls per agent to ensure that Move-In, Move-Out or Update Activity requestors are validated by front office operator. (Validation of full customer name, and full address or contract account number or contract number for move-out, and Social Security Number (required for residential), Driver License and Tax ID) are required for Move-out or Update Activity). The callers are authorized requestors who are seller or sold-to party business partner, a person who has been defined as authorized by the seller or sold-to-party business partner, or requestors with documentation that authorizes the requester. BCD Operations—Data Governance & Data Quality—conducts annual contact certification to ensure communication methods with assigned business contacts are complete and accurate.	ITDM (IT Dependent Manual Control)	N/A
-----------------------------	-----	---	--	------------------------------------	-----

New CONTROL- ZZZ-5129	N/A	Inaccurate or incomplete business master data may lead to bad debt increase or revenue loss. (Contract will not be created and appears in the error monitoring queue.)	When Installation is marked deleted, the Deleted checkbox will be checked and user will not be able select that Installation for Move In/ Transfer. This will eliminate user mistakenly select the deleted Installation for Move In.	IT Automated Control	E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees
New CONTROL- ZZZ-5128	N/A	Incorrect or unauthorized program implementation or processing may lead to financial misstatements or noncompliance with applicable regulations. (Rate category selected is incorrect, if the drop down gives multiple options.)	An enhancement in S/4HANA to validate the Rate Category is compatible with the meter type when selecting from the Rate Category Option field in Hybris C4C. The validation check prevents the incorrect rate category from being selected.	ITAC (Configurable)	E-DF-DM-04 – BRFPlus Application for Installation
New CONTROL- ZZZ-5046	N/A	Inaccurate or incomplete business master data may lead to bad debt increase or revenue loss. (Inaccurate or incomplete validation process with regard to recognition of business partners and 3rd party information may lead to revenue loss or fraudulent activities.)	On an annual basis, the BCD Operations – Data Governance & Data Quality team conducts a certification process to validate the communication methods associated to Business Partner contact information in SAP ISU is complete and accurate. If contact information or existing relationship(s) is no longer valid the team will remove them and update the new contacts and relationships as needed.	ITDM (IT Dependent Manual)	NA

2.17 Custom Program/Transaction Codes

Please identify any custom programs/transaction codes that need to be developed for RICEFW objects. This custom database will be used to maintain the list of Move In fees type which drive what are the Move In fees to be shown in C4C screen as seen in Figure 7 Mock up screen. There is a need to have a custom program to track the creation user id, last update user id and date time.

- Is the custom program executed in the batch mode or dialogue mode
- Is the custom program assigned to an authorization group
- What is the custom transaction code for the custom program
- Should there be an authorization check made against any field in the custom program/custom t-code and if so what is the custom/standard authorization object used(For example does it have to be restricted to residential vs commercial customer)
- Does the custom programs/custom t-codes have any critical or sensitive customer information that needs extra security

Custom Table	Authorization Grp Assigned	Custom T-code for the Table	Table Access (display/update)	RICEFW Reference ID
Program to maintain the types of Move In Fees	IT	ZMOVEIN_FEES		E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees

2.18 Custom Table/Transaction Codes

Please identify any custom tables/transaction codes that need to be developed for RICEFW objects.

- Are there any customer sensitive/critical Z tables created
- What is the authorization group assigned to the table
- Is it just a maintenance or display only table
- What is the Z transaction code for the custom table

Custom Table	Authorization Grp Assigned	Custom T-code for the Table	Table Access (display/update)	RICEFW Reference ID

2.19 Data Criticality and Cybersecurity Baseline Risks

Specify the Information this BP will process, receive or transmit;	List data elements from section 2.8 here, including volume. <table border="1"> <thead> <tr> <th>Data element</th><th>Description</th><th>Volume</th><th>Risk (high , medium, low)</th></tr> </thead> <tbody> <tr> <td></td><td></td><td></td><td></td></tr> </tbody> </table>	Data element	Description	Volume	Risk (high , medium, low)				
Data element	Description	Volume	Risk (high , medium, low)						
Specify Access Classification /Special Handling or Regulatory Requirement	<Select all that apply> ☒ PII - Personal Identifiable Information / Privacy Law ☐ CEII - Critical Energy Infrastructure Information ☐ FERC SOC (Standards of Conduct) ☐ NERC CIP Confidential ☒ Sarbanes-Oxley (SOX) financial reporting data ☐ SCE utility data accessible by affiliate companies (CPUC) ☐ PCI - Payment Card Industry Compliance ☐ Customer Information Service Request (CISR, CISR-DRP) ☐ Other _<Please Specify>_ ☒ Internal ☐ Public								
Please identify which business Group/Role will require access to the data and/or solution:	<Select all that apply> ☒ SCE Customer, Res./Comm. Customer; ☒ SCE OU, Business Function Organization Name: CCC, BCD, RSO Credit and Billing ☐ Vendor ☐ External business partner(s) & SaaS providers ☐ External on-shore contractors ☐ External off-shore contractors ☐ SCE Affiliate Company Employees ☐ SCE Employees, specify if they have Marketing Function responsibilities (e.g., ES&M) ☐ SCE contract workers ☒ Regulatory Agencies ☐ Others _<Please Specify>_								

How many of the SCE Customer, Employee, Vendors will use or affected by the Business Process?	100; 100 – 1,000; 1,000 – 10,000 Approximately 10,000+
How much Information/data would be processed, received or transmitted by the Business Process?	100 MB /GB; 100 – 1,000 MB / GB Approximately 1,000 – 10,000 MB/ GB 10,000 + MB / GB
Number of business transactions in average?	10000 + Approximately
Additional Security Consideration:	Any Cybersecurity impact in addition to SAP system security: • Internet Facing Web Application? Yes/No, Details: • Internet Facing Application Programming Interface? Yes • 3rd party Federated Authentication & Authorization, Single Sign On? • Cloud Application (non-C4C)? Yes • Hybrid C4C? Yes

2. Technical Considerations

2.20 4.1 RICEF-W Assessment

All of the Forms, Reports, Interfaces, Conversion items, Extensions/Enhancements and Workflows (RICEF-W) that have been identified for this BPD are detailed in the tables below and will represent the totality of all RICEF-W items documented at the time of sign-off of this BPD. Any RICEF-W items that are confirmed via change control after this BPD receives final sign-off, will be managed within Southern California Edison's APSE environment and not within this document.

1.1.46 Reports

Report Name & Description (List Requirements met by this Report)	Complexity	Reference ID
N/A		

1.1.47 Interfaces

Interface Name & Description (List Requirements met by this Interface)	Complexity	Reference ID
Interface to CLICK for appointment scheduling. Available days will be presented in the Move In Date field's calendar. Applicable to Move In and Move In Date Change.	Complex	I-DF-WM-02—Click Schedule to CR&B for status
Interface with Experian for Credit Check. Note: This item is already catered for in E-CC-FI-03—Security Deposit Request (Eligibility, and Amount Determination).	Medium	I-CIM-CS-02-1-001 Interface with Experian for Credit Check during Move In

1.1.48 Conversion

Conversion Name & Description (List Requirements met by this Conversion)	Complexity	Reference ID
C-CIM-CS-02 - MOVE_IN Conversion for active contracts including contracts with future move in date	Complex	#110
C-DF-WM-02 DISC_DOC Disconnection Document	Medium	#45
C-DF-WM-02 DISC_ENTER Disconnection Order & Reconnection Order	Medium	#46
C-CIM-CS-2-Move Out Date Conversion for pending Move Out (future Move Out date). Move Out Date will be added into the Contract Structure.	Simple	#2028 **This is a new Tier 1 RICEFW

1.1.49 Extension/Enhancements

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
E-CIM-CS-17-010—Appointment scheduling Enhancement to Move In Date calendar to enable the available days and disable the non-available days based on CLICK scheduling.	Medium	#1535

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
E-CIM-CS-03 - Move Out /Change/Reversal - Invoice Reversal Auto reverse bills for backdated move in, back dated move in change and move in reversal. Requirement - 1178 - CIM-CS-03-R0009 Requirement - 1194 - CIM-CS-03-R0025 Requirement - 1201 - CIM-CS-03-R0032 Requirement - 1202 - CIM-CS-03-R0033 Requirement - 289 - CIM-CS-02-R0039 Requirement - 591- CIM-CS-02-R0041 Requirement - 1216 - CIM-CS-03-R0047 Requirement - 1217 - CIM-CS-03-R0048	Complex	#1129
E-CIM-CS-02 – Group rate by segmentation & type & perform validation Filter rate category based on business rule and available for user to select	Medium	#1084
E-CIM-CS-02-1-016 Default CPP rate during Move-In & Transfer Default CPP rate during Transfer of Service Requirement - 646 - CIM-CS-02-R0096	Medium	#1097
E-CIM-CS-02-021 Capture premise square footage Capture premise square footage information for Security Deposit calculation Requirement - 649 - CIM-CS-02-R0099	Simple	#1099
E-CIM-CS-01-02 Default Streetlight Product Default metered streetlight rate category	Medium	#1536
E-CIM-CS-02 – Same Party In identification and indicator and BPEM case creation Identify Same Party In & Added Facility based on business rules and auto creation of BPEM case Requirement - 630 - CIM-CS-02-R0080 Requirement - 631 - CIM-CS-02-R0081 Requirement - 632 - CIM-CS-02-R0082 Requirement - 8415 - CIM-CS-17-R0092	Complex	#1095
E-CIM-CS-02 Transaction Launcher Ability to view/update these S/4HANA screen via FOP: - Installation: Supply Guarantee field for Self-Certified Sensitive, Industry field for NAICS, Supply Scenario for CCA/DA - Installation Facts: Water Flow Restrictor, Primary & Secondary premise Requirement - 1232 - CIM-CS-03-R0063 Requirement - 2168 - CIM-CS-06-R0001 Requirement - 2215 - CIM-CS-07-R0008	Simple	#1902
E-CIM-CS-02-1-024 – Prompt SDP message for SDP device Display messages based on business rule such as Summer Discount Plan if device is SDP Requirement - 645 - CIM-CS-02-R0095	Simple	#1098
E-CIM-CS-02-1-020 CCA participating identifier Obtain CCA participating information and display on the Hybris C4C Move In view	Simple	#1096
E-CIM-CS-02-1-026 – BPEM case for cut in flat scenario Automatic creation of BPEM case for Cut in Flat scenario Requirement - 653 - CIM-CS-02-R0103	Simple	#1100
E-CIM-CS-02-1-010 Default next bill cycle date Default next bill cycle date in Rate Category Change Requirement - 576 - CIM-CS-02-R0026	Simple	#1088
E-CIM-CS-02 – P&P view on program information Ability to check prior program participation during move-in process and re-enable if within business Requirement - 600 CIM-CS-02-R0050	Complex	#1199

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
E-CIM-CS-02 - Capture Opt Out, Inspection Required and service fees Default and capture fees related to Move In - Service Establishment fees - Default and capture Outside business hour fees - - ECS Opt Out check box - Deleted (Installation) check box Requirement - 599 - CIM-CS-02-R0049 Requirement - 621 - CIM-CS-02-R0071 Requirement - 624 - CIM-CS-02-R0074 Requirement - 625 - CIM-CS-02-R0075 Requirement - 626 - CIM-CS-02-R0076 Requirement - 651 - CIM-CS-02-R0101 Requirement - 1752 - UB-DM-01-R0013 Requirement - 3457 - DF-DM-04-R0061 Requirement - 500 - UB-ID-03-R0018 Requirement - 10112 - CIM-CS-03-R0081 Requirement - 639 - CIM-CS-02-R0089 Requirement - 10119 - CIM-CS-03-R0087	Medium	#1090
E-CIM-CS-02 NEM Move In above 30kW Generating systems greater than 30 kW, system to show notification on Hybris C4C view	Simple	#1538
E-CIM-CS-02 Product validity check Display rate options for a customer that are open for new enrollment or Product Change functionality to front office employee Ability for the agent to modify rate option when modifying the Move In date for a future request Requirement - 553 - CIM-CS-02-R0003	Medium	#2022
E-CIM-CS-02 Force Out reversal Ability for system to automatically cancel a forced off if the associated move in is reversed. (Treatment of forced off customer when a move in/turn on is reversed.) Requirement - 579 - CIM-CS-02-R0029	Medium	#1089
E-CIM-CS-02 - Create Work Order during Move-In/Move-Out/Transfer - Create Service Order for Opt Out smart meter, premise does not have smart meter, meter is RSS in-eligible - Cancellation of Service Order or RSS Request due to Move In Reversal - Not to create Service Order or RSS Request for SPI, bad Credit Check result (fraud) and Customer Verification failed scenarios - Safety Message that is not accepted by BP, a Service Order needs to be created instead of RSS request - New Construction requirement Requirement - 573 - CIM-CS-02-R0023 Requirement - 586 - CIM-CS-02-R0036 Requirement - 597 - CIM-CS-02-R0047 Requirement - 1225 - CIM-CS-03-R0056 Requirement - 3465 - DF-DM-04-R0069 Requirement - 3464 - DF-DM-04-R0068 Requirement - 3463 - DF-DM-04-R0067 Requirement - 3462 - DF-DM-04-R0066 Requirement - 10112 - CIM-CS-03-R0081 Requirement - 1192 - CIM-CS-03-R0023 Requirement - 1219 - CIM-CS-03-R0050 Requirement - 1226 - CIM-CS-03-R0057	Complex	#1087

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
E-CIM-CS-02 – Move-in Custom validations	Medium	#1817
E-CIM-CS-02 – Tag contract with Billing Block based on Soft Credit Inquiry result Ability for the user to put move in on hold if customer fails the soft credit inquiry with a result of business rule such as "Refer to Credit", "Authenticate" and out of the wallet result "Refer" Requirement – 656 - CIM-CS-02-R0106	Simple	#1101
E-CIM-CS-02 - Move-in default Ability for system not to default CCA to move in customer when customer transfer within the same CCA territory when the customer has opted out of CCA Ability for system to default CCA to move in customer when customer transfer to different CCA territory when the customer has opted out of CCA System shall default Product to AL-2 for location that identified as Metered Street lights AL-2. Default will be based on mapping rules The system shall make the TOU-D 4/5 the default rate when a new customers establishes service at a new address (either new application or transferring of existing service) The system shall track and display if DOMESTIC customer was defaulted or opted into default rate The system shall exclude the following customers from defaulting to TOU- Medical baseline, 3rd party notification, customers requesting an in person visit and CARE/FERA in hot climates zones (10, 13, 14 and 15), complex NEM, CPP, CCA, DA, DMS Requirement - 1246 - CIM-CS-03-R0077 Requirement - 1247 - CIM-CS-03-R0078 Requirement - 8409 - CIM-CS-17-R0086 Requirement - 8418 - CIM-CS-17-R0095 Requirement - 8423 - CIM-CS-17-R0100 Requirement - 8425 - CIM-CS-17-R0102	Medium	#1825 ** Tier 2 RICEFW business recommending to change to Tier 1
E-CIM-CS-02 Validate Contract Account against Installation To validate Contract Account does not have mix contract To validate CCA Opt Out Contract Account does not mix with non CCA Opt Out Contract	Medium	#2029 ** This is a new Tier 1 RICEFW

1.1.50 Forms

Form Name & Description (List Requirements met by this Form)	Complexity	Reference ID
Welcome notification	Simple	F-CIM-CS-02 – Welcome notification
Move-In-Date-Change notification	Simple	F-CIM-CS-02 – Move-In-Date-Change notification

Form Name & Description (List Requirements met by this Form)	Complexity	Reference ID
Rate Category Change notification	Medium	F-CIM-CS-02 - Rate Category Change notification
Move In Reversal notification	Simple	F-CIM-CS-02 - Move In Reversal notification

1.1.51 Workflows

Workflow Name & Description (List Requirements met by this Workflow)	Complexity	Reference ID
Update new Move In Date to Service Order and RSS	Simple	W-CIM-CS-02 - Align new Move-In date to Service Order ** Change from E to W

2.21 IDEX Considerations

- Obtaining CCA opt out not allow identifier from IDEX and disable the CCA opt out option at the time the Move In is requested.
- Upon completion of Move In, IDEX will interface and provide the data to CCA/DA system for CCA/DA to establish the service to BP using *E-UB-ID-01 - 814 INBOUND CASR Processing*.
- Upon completion of Move In adjustment, IDEX will interface and provide the data to CCA/DA system for change of data.
- Upon completion of Move In reversal, IDEX will interace and provide the data to CCA/DA system to abort the establishment of service to BP.

2.22 Production System Cut-over Considerations

- All active and pending contracts for all BP will be migrated over to SAP S/4HANA. Contracts having past Move Out Date or marked deleted will not be migrated over to SAP
- Move In Document will be created when Contract is created in S/4HANA
- Meter change requests for pending Move In will be migrated
- Inflight Move In will be created in SAP after system go live. Inflight Move In is the Move In request that submitted from BP between the time where CCS system is shut down till the time SAP is ready to accept Move In request
- CCA/DA commitment period will be migrated from legacy to SAP. This conversion object will be covered in IDEX BPD
- Pending Move Ins/Outs schedule for same day will be updated before migration starts (Move In date will remain same and Move Out date will be changes to prior day).

2.23 4.4 Other Considerations

N/A

3. Change Management

2.24 5.1 Change Impacts

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Prior to performing the move-in in the SAP system, the users will need to search and confirm for a customer and premise. The move in transaction will link the business and premise. This process is a change in the current workflow of a turn on. Currently agents search the business partner to begin the transaction and then select a premise	Process (133)	CS-CSOD-CCC All CS-BCD-All, CS- CSOD-Consumer Affairs	Medium	Medium
The turn on/turn off field order can be cancelled without having to cancel move in / move out document. In SAP the field order is separate from the MIMO document. The field order can be updated or canceled without changing the move in or move out. Currently the field order is connected to both the field request and the transaction. This will increase flexibility to decide if a field order is needed to complete the request especially for FOIE/OIE scenarios. If users change the move in/move out object, the users must also remember to change the field order. It can also increase idle usage if MIMO is not matched to the field order date.	Process; Benefit/Improvement; Culture Shift (134)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs	CCC/BCD- Low RSO-High	CCC/BCD- Low RSO-High
In SAP, if customers request to change the date of their move out but the service has been turned off, users will have the ability to make date changes to the move out order even if the field order has been completed. The users will need to issue a field order to start the service again based on the new date change. In the current process, if the turn off is completed and the customer wants to change the date, users will need to issue another turn on to begin service again and bill service charges. It will create process efficiencies since a second turn on will not need to be issued	Process; Benefit/Improvement (135)	CS-CSOD-CCC All; CS-BCD-All; CS- CSOD-Consumer Affairs	Low	Medium
There will be a one-day gap between the move-in and move-out date in the SAP system. Current system allows for turn on/turn off dates to match to prevent a break in service. The dates will be based on the full day usage. This will have an impact to billing data because currently we bill to the interval and not the full day. There is a risk of idle usage as well as escalations related to idle usage billing.	Process; Culture Shift; Decision Making (136)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO-CBO CP&S-Reporting and Analytics; CS- CSOD-Consumer Affairs	Medium	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Other departments such as Business Customer Division (BCD) will have the ability to issue move-ins/outs. Less move-in/out to be processed by CCC and potential improved customer satisfaction Currently if BCD needs to complete a turn on, they send their request to CCC to complete. BCD will need to ensure that all appropriate fields are completed (e.g. tax id, social security etc.) as well as provide customers information regarding their move in responsibilities (e.g. usage billing etc)	Process; Job Roles; Decision Making; Culture Shift (137)	CS-CSOD-RSO All; CS-BCD-All	BCD-Medium RSO-High	BCD-Medium RSO-High
The move-in customer will be responsible for any usage accumulated for the day regardless of time. It will be based on the move in date. This can lead to escalations if there is high amount of idle usage. Customer Impact - Customers may dispute usage that is billed to them for the day especially if a new party moves in on the same day.	Process; Culture Shift; Decision Making (139)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs; Ext-Customers-All	CCC/BCD-Medium RSO-Low	CCC/BCD-Medium RSO-Low
During a move-in or mailing address change, the user will need to define if the contract address (aka service address) should become the standard for the BP. This is another step the user will need to take and if missed it could impact where information is mailed for other contract accounts under the BP. Training will be required to ensure that any fixed addresses are /are not updated as appropriate.	Process (140)	CS-BCD-All; CS-CSOD-CCC All CP&S-CX&I; CS-CSOD-Consumer Affairs	Low CP&S - High	Low CP&S - High
During the move in process for a new business partner, the existing product will be the default but users will have the ability to select other product options in the drop down selection. If the rate is no longer available due to decommissioning, the user will not be allowed to select the rate. Users will need to discuss with the customer other rate options based on availability. Currently the base domestic rate is pre-populated but commercial turn on's are blank. This will result in fewer key strokes and enable discussion regarding product selection. It will also ensure that customers' are enrolled in available rates and minimizes re-billing at a later time. Dependent on product selection, it may increase rate corrections to RSO	Process; Decision Making; Regulatory/Legal (141)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs	CCC/BCD-Low RSO-Medium	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
In SAP, a user can start a move-in and navigate to separate screens which allows flexibility and risk if they do not return to finish the move-in. Users will need to make sure that they are going back into to the transaction to complete the request. Today's functionality does not allow for navigation outside of the screen until transaction is complete.	Process; Benefit/Improvement (143)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-Consumer Affairs	Low	Medium
Currently the Dragon natural speaking system is used to create macros notes and initiate CSS transactions. The CCC Dragon support team will need to determine how the templates and transactions will integrate and work with the SAP system. The use of dragon is proven to lower AHT and minimize key strokes (increase in RMI injuries) for users.	Process; Technology; Compensation/ Performance (144)	CS-CSOD-CCC All; CS-CSOD-Consumer Affairs; CS-CSOD-RSO All	High	High
Hotkeys are supported and configurable in ISU on-premise, however, there is only standard hotkeys available for Hybris C4C (the proposed frontend for CCC). So hotkey availability will likely change for the front office users. This can have an impact to AHT as well as minimize key strokes (increase in RMI injuries).	Process; Compensation/ Performance; Technology (145)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs	CCC/RSO – High BCD - Low	CCC/RSO –High BCD - Low
There are new terminology in SAP. For instance, rate is equal to product and Service Account is equal to Contract. Users will need to become familiar with the new terminology and any references to old terminology will need to be updated.	Process (148)	CS-BCD-All; CS-CSOD-CCC All CP&S-ALL; CS-CSOD-Consumer Affairs	Medium	Medium
In SAP, RSO will be able to complete a billing reversal without having to cancel any future dated move in requests. Currently to complete any billing reversals, RSO needs to cancel the turn on request so that they can make billing corrections and then re-issue the turn on request. The time needed to complete the requests can be minimized since the user will not need to re-issue any other orders.	Process (150)	CS-CSOD-RSO All	Low	Low
The agent will need to manually update the forced out date due to move-in date change if the date alignment requirement cannot be met. Currently a turn off will be included in the turn on case if no turn off is issued. Training will be required to ensure that agents check if a turn off was issued as a result of a turn on to make sure on in error that the dates change. If not done correctly, it can cause idle usage. Enhancement is pending to align move in/move out object with field order.	Process; Decision Making (152)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs	CCC-Medium BCD-Low RSO-High	CCC-Medium BCD-Low RSO-High

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Agents may have the ability to complete MIMO on weekends pending a decision. Currently we do not complete MIMOs on weekends/holidays. The official start date is currently the next business day available. The ability to complete MIMOs on weekends gives more flexibility to our customers with regards to start dates but may have an impact to the field personnel if the remote service switch fails.	Process; Benefit/Improvement (153)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-Consumer Affairs	Low	Medium
Product changes are completed in the move in document. For RSO, it is recommended to use the front office UI to complete the product change. They will need to select an effective date based on the next bill cycle. There is an enhancement request for an auto selection of the effective date. Today it is completed within one screen	Process (154)	CS-CSOD-RSO-CBO	Low	Low
In SAP, a contract end date is visible to users including active contracts. Agent will need to be familiar with the contract end date of 12/31/9999 to mean that the contract is active. Currently there is no end date unless the contract is inactive.	Process (155)	CS-CSOD-CCC All; CS-CSOD-RSO All; CS-BCD-All; CS-CSOD-Consumer Affairs	Low	Low
Frontline users will have the ability to complete product changes including adding, updating or removing. The users will have the ability to also complete retroactive requests to different products based on eligibility rules. If the CCC and BCD is going to complete product changes, they will need to further research and validate if product is applicable within predefined business rules (staying on the rate for 1 year).	Process; Decision Making; Benefit/Improvement; Regulatory/Legal; Job Roles (156)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO-CBO; CS-CSOD-Consumer Affairs	Medium	High
Agents will need to advise customers about a new turn on date if the turn on is not completed for any reason such as Remote Service Switch failures. The work order will automatically be created for RSS failures.	Process (159)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-Consumer Affairs	Low	Low
In SAP, the deposit will need to be billed again for the new contract since the deposit and energy statement are on the same contract account. Any credits from the contract that was OIE will apply to the new contract. Currently we have a separate customer accounts for the deposit and the energy statement therefore, during a foie/oie scenario the deposit does not need to be reversed and rebilled as it is a separate account.	Process; Decision Making (160)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO All; CS-CSOD-Consumer Affairs	CCC/BCD-Medium RSO-Low	CCC/BCD-Medium RSO-Low

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
SAP will automatically complete Force Out in Error/On In Error (foie/oie) exception cases through the move in/move out process using the front office UI. The system will complete the bill reversal and bill forward for the appropriate customers based on the transactions. If the field order has been completed and the service is turned off, a turn on field order can be issued to start the service. Front office users will have the ability to correct these scenarios and exception cases do not need to be issued to RSO to complete. This process creates efficiencies since no hand off is necessary to the back office users.	Process; Benefit/ Improvement; Decision Making; Staffing Levels (161)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-RSO All	CCC/BCD- High RSO-Low	CCC/BCD- High RSO-Low
When a customer requests a reversal and a cancellation of a move in/move out, SAP will automatically reverse all fees/deposits related to the invoice. SAP will also automate the reversal of any special care profiles, CVD investigation, and any work orders at time of move-in/ move out reversal. In CSS, back office users need to manually reverse fees and deposits related to any changes for a move in/move out.	Process; Benefit/ Improvement; Job Roles; Decision Making (162)	CS-CSOD-CCC All; CS-BCD-All; CS- CSOD-Consumer Affairs	Low	Low
The naming convention will change in SAP related to turn on/turn off services. Move in is an object vs turn on is a work order to connect the power (e.g. RSS, field turn on) as a result of the move in object. Move out is an object vs a turn off is a work order that disconnects the power as a result of the move out object. Move in/out adjustment is the change of date. Move in/out reversal is equal to move in/out cancellation. Process Start Stop is equivalent to transfer of service in SAP	Process (177)	CS-CSOD-CCC All; CS-CSOD-RSO All; CS-BCD-All; CS- CSOD-Consumer Affairs	Low	Low
Currently the move in/ move out adjustment is done by the back office only. In the future, the adjustment can be done via front office and back office. Since the front office will be able to complete the adjustments, no hand off is required to RSO. There may be an increase to bill corrections if not done correctly	Process; Job Roles; Benefit/Improvement; Decision Making (178)	CS-CSOD-CCC All; CS-BCD-All; CS- CSOD-RSO All; CS- CSOD-Consumer Affairs	CCC/BCD- Low RSO-High	CCC/BCD- Low RSO-High

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
In SAP, the move in/ move out process is fully automated using the Front office UI. Back office users that need to complete a move in/move out order should complete these orders in the Front office UI so that the order can be automatically completed. Otherwise performing these transactions via Back office, will consist of multiple steps that need to be issued to complete the order. In today's world, the process is the same whether using CSS or CWO.	Process (182)	CS-CSOD-RSO-BOM	Low	Low
During a transfer of service, enrollments of certain programs may be automated depending on which level the program is stored at (e.g. Business Partner, Installation or Contract Account). Today, customers that start service will need to re-enroll for programs. It does not automatically transfer to their new location. This change creates efficiencies for customers that transfer service. Advisors will need to review program enrollment to ensure that the customer still wants to continue participating within the program. Customer Impact: Certain programs that customers' are enrolled in will be automatically transferred to their new home. Customers will no longer need to re-apply for the programs. It will save customers' time and will begin any program savings at the start of service.	Process; Benefit/Improvement; Decision Making; Culture Shift (184)	Ext-Customers-All; CS-CSOD-CCC All; CS-BCD-All; CS- CSOD-RSO-BOM	CCC/BCD- Medium RSO-Low	CCC/BCD- Medium RSO-Low
The deposit calculation methodology is expected to be updated by RSO Credit. Energy advisor will need to understand the new process so they can explain it to customers when needed. Impact will be dependent on how different the calculation methodology will be. Currently CSS/CWO has a deposit table that agents use to determine deposit amount needed to bill a customer. It is based on location and type of premise (e.g. apartment, house, mobile home etc.) and a deposit amount is given based on these factors. Customer impact: Depending on methodology and calculation, customers deposit requirements may change.	Process (191)	CS-CSOD-CCC All; CS-CSOD-RSO- Credit; CS-BCD-All; CS- CSOD-Consumer Affairs; Ext- Customers-All	Low	Low

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
The risk class that we use today is being re-evaluated and may change in the future. There may be a new way of tagging risk levels or deposit security needs. Users will need to know the new internal credit scores to aide in decision making such as determining deposit at time of turn on. In the current system, all customer accounts have a credit risk associated with them (e.g. High, Med, Low, Very Low). These are based on criteria associated with the customer account such as payment history, return checks, LPCs, # of disconnects. Customer impact: Customers internal credit risk scores may change based on the criteria.	Process; Decision Making (192)	CS-CSOD-CCC All; CS-CSOD-RSO-Credit; Ext-Customers-All; CS-BCD-All; CS-CSOD-Consumer Affairs	Low	Low
All transactions/orders must replicate to the backend from the front end tool. If it fails, someone must address the replication error. A new role will be required to address exceptions. SCE business users are more appropriate to work on replication issues as SCE IT may not have the authorized system functionalities to fix the data compared to business users	Job Roles (35)	CS-CSOD-CCC All; CS-CSOD-RSO All; CS-BCD-All; CS-CSOD-Consumer Affairs	CCC/BCD-Low RSO-Medium	CCC/BCD-Low RSO-Medium
BCD will have the ability to issue move in / move out adjustments (date change) and reversals (move in cancellation). This will minimize hand offs to other departments and no follow up will be required. Currently adjustments and reversals are processed by the CCC and RSO. This is pending a policy decision.	Benefit/ Improvement; Culture Shift; Decision Making; Job Roles; Process (664)	CS-BCD-All; CS-CSOD-RSO-CBO; CS-CSOD-CCC All	High	High
Front office users (CCC) will need to create a BPEM case to back office when credit check fails and credit investigation is needed. Users will need to add the details including results in the BPEM. Currently the system automatically notifies Credit when the user selects that a credit investigation is required. Users will need to be trained on the new process which requires an additional step from the current process.	Process, Decision Making (730)	CS-CSOD-CCC All; CS-CSOD-RSO-Credit; CS-CSOD-Consumer Affairs	CCC - Medium RSO Credit - High	CCC - Medium RSO Credit - High
Front office users (CCC and BCD) will need to create a BPEM case to the back office to add a contract account to a joint/collective account. Users will need to note clearly how the customer wants to be summary billed. Currently we do not have an option that is similar to a Collective account which is more complex than our current summary billing option. If the linking is not done correctly, it can have billing and credit impacts including delayed billing	Process, Decision Making (731)	CS-CSOD-CCC All; CS-BCD-All, CS-CSOD-RSO-All; CS-CSOD-Consumer Affairs	High	High

Front office users (CCC and BCD) will have the ability to create a ticket for requests of orders for 7 or more requests to an Offline Support groups for completion instead of sending an email. The tickets will provide more traceability of the request. This BPEM may or may not be used and is dependent on resource availability.	Process (732)	CS-CSOD-CCC All; CS-BCD-All	Low	Low
Interaction records/Notes/Activity currently does not replicate in the front office UI and back office UI. Back office users will not have visibility to Activities added by front office and vice versa. Currently users of similar systems (e.g., CSS) can view any transactions completed by back office or front office. Users may not see the full picture of the account if they do not have access to see interactions done by back office or front office. This is pending a review with SAP regarding future SAP enhancements. Users (CCC, BCD, RSO) will need to create a BPEM case to T&D for Added Facility Request move in and move out. Currently emails are generated for Added Facility requests. The BPEM creates visibility and traceability of the process	Process (734)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO-All	Low	Low
Front office users (CCC and BCD) will need to create a Service Order and BPEM case to request a rate category change to back office if the current meter type is not compatible to the rate that the customer is requesting. Currently rate changes are completed by the back office and the meter change request is issued automatically if needed.	Process (735)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO-All; T&D-TS&O-Meter Engineering; CS- CSOD-Consumer Affairs	Low	Low

Below is a description of each:

Change Element Short Description: Describes the 'As-Is' scenario and what is changing.

Change Impact Category: Determined by asking the questions below.

1. **Staffing Levels** - Is the work effort increasing or decreasing (staffing levels), and how (e.g., task automation, new process/tasks)?
2. **Job Roles** - Will the responsibilities, authority, or required skills for a job or job roles change? Will people be reporting to new leaders? Will managers' responsibilities change?
3. **Compensation / Performance** - Will the changes have such an impact on roles of an individual that merits a change in how they are compensated or how their performance will be evaluated? What behaviors are rewarded and recognized?
4. **Organization Structure** - Is the ownership of the Process or Data changing (think departments, jobs, or roles, not individuals)?
5. **Decision Making** - Will any of the changes impact how decisions are made, by or between, business units / departments? Who makes them, how they determine the criteria for making a change?

6. **Culture Shift** - Will organizational value systems impact the way change happens or be impacted by the change? What are the underlying values of the organization that will directly influence the way change will be accepted and how much work will ultimately be required to ensure successful outcomes for the business?
7. **Location / Facilities** - Will the change impact the physical location where they process is being implemented or require changes to the facilities to enable the process to be effective?
8. **Process** - Any change to the current process (e.g. manual process becomes automatic, or vice versa)? Are there new processes being introduced or an old process being decommissioned? Is there a requirement to change an existing business rule or business policy? Will new business rule or policy needs to be introduced and enforced or complied to?
9. **Regulatory/ Legal** - Are there any legal / regulatory requirements that might be impacted
10. **Technology** - Are other applications impacted (e.g., going away, becoming read-only), or are there new requirements (e.g., new SW / HW, new version)
11. **Benefit/Improvement** - Will there be an improvement or benefit to any of the stakeholders because of this change. (Be sure to include any pain points that are being alleviated)
12. **Other** - Are there emotional implications stemming from any of these changes (think of buy-in issues or fears)

Audience Group(s): These are the affected departments, divisions etc...

Impact: The following were used to determine the impact:

Level	
HIGH 	BUSINESS OUTCOMES: Drives change to cost, efficiency, customers. JOB: More than 40% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: - Shift from manually intensive role to using new tools and systems - Employee is going to be redeployed - High level of "technical or functional" changes needed for a particular group - Significant changes to culture & attitudes to get job done - Big shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) RELATIONSHIPS: High level of "relational" changes for a particular group (e.g. reporting relationships, effective working relationships with customers, teams, and stakeholders etc.) POLICIES/PROCEDURES: Processes, procedures, and/ or policies are not in place today and need to be defined. REGULATORY REQUIREMENT: drive changes to the way we comply
Level	
MEDIUM 	BUSINESS OUTCOMES: Limited change to cost, efficiency, customers. JOB: 20-40% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: - Employee job title or function is modified, resulting in minor to moderate changes to roles and responsibilities. - There will be some changes to the culture & attitudes - Shift from moderate technology use to using new tools and systems - Moderate level of "technical or functional" changes needed for a particular group - Moderate shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) RELATIONSHIPS: Moderate level of "relational" changes for a particular group (e.g. reporting relationships) POLICIES/PROCEDURES: Processes, procedures, and/or policies are inconsistent today and not defined or documented in many cases REGULATORY REQUIREMENT: No impact.

Level	
LOW 	• BUSINESS OUTCOMES: No impact. • JOB: Less than 20% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: • Employee job title or function is slightly modified with few, if any, changes to roles and responsibilities • There will be little change to the culture & attitudes • Shift from using some technology to new systems & tools • Light level of "technical or functional" changes needed for a particular group • Small shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) • RELATIONSHIPS: No impact or light level of "relational" changes for a particular group (e.g. reporting relationships) • POLICIES/PROCEDURES: Processes, procedures, and/or policies are consistent, but not well documented, and will need to be documented/ Other minor changes to be made. • REGULATORY REQUIREMENT: No impact.

Business Effort: Initial assessment of the impact to the business High, Medium, Low
