1 Business Process Overview

The Manage Owner Allocation process will define how to create, change, display, and reverse a Property for a Business Partner (BP) within SAP environment. This document describes the setup and processing of a Landlord Agreement, which is known as Owner Allocation (OA) in SAP. Creating a Property and allocating the BP as the Owner to that Property creates a logical relationship between the two entities, but it does not establish a Contract for the Owner in and of itself. The relationship information is available as part of the OA process in order to facilitate the move-in of the Owner the day after the tenant moves out of the premise where the owner has an active Landlord Agreement.

OA uses Contract Account (CA) to link the BP with the Property. A BP can have multiple rental premises and can use different CAs for each rental premise.

Within SAP, the property object can consist of one or more Installations, Premises, and Connection Objects.

The OA process is utilized to facilitate agreements with Owners for an automatic New Contract (move-in) into their name so that an Installation is not disconnected when the Premise is vacated by a tenant. OA is triggered when the tenant's Contract is ended in good faith with one or more installations associated with an active property. The OA process will automatically place the service back into the Owner's name without additional contact from the owner.

It is possible to create a Property where the OA is strictly for informational purposes with no automatic move-in occurring, however the maintenance of these owner-to-property relationships can often become inaccurate.

1.1 Current Pain Points for Southern California Edison

- Customers sometimes forget they have an OA and never cancel the OA, and get a large bill that they want to contest.
- Sometimes renters will never put service in their name because the lights are on. This puts the energy usage on the owner's bill, then it becomes a civil matter or a bill correction.
- The owner can verbally cancel the agreement, but the phone rep needs to fill out a template and email it to be worked. This process can take about 2-3 days to complete; up to an additional 10 days. It should be instant.
- Agreements that are received via US Mail take more time due to US Mail process.
- Our fax number has changed over the years, yet some customers are still using the old fax number, which delays processing.
- Owner sells but does not notify SCE to cancel agreement and call to contest the bill.

- Front line Energy Advisors are not trained to handle customer requests to sign up, update or cancel owner allocation agreements.
- Cancellation requests for large complexes are very time consuming with solo billed customers.
- Cancelling one unit requires cancelling the entire contract, then reinstating all others. This is an SCE Business Rule today.
- Must wait a day between end of current property owner and beginning of new property owner of same property (current system limitation)

1.4 Terminology alphabetical order

Term or Acronym	Description of Term or Acronym used in this Document
APSE	Accelerated (or Axon) Project Support Environment
BDEX	SAP add-on functionality to support the processing of BPEM Cases
Billing Cycle	Is a group of contracts to be billed together via date-driven or regional criteria, it controls the billing cycle and is linked to the Meter Reading Unit. SAP equivalent term is the Portion.
Billing Document	A document that outlines the charges incurred for energy consumption for a specific contract. During the process of Billing, a billing document is generated for each contract on a contract account.
BMD	Business Master Data. The customer information which includes personal details, payment terms, dunning levels, billing rates and rate categories. The business master data objects are Business Partner, Business Agreement/Contract Account and Contract.
BPD	Business Process Design (or Document)
BPEM	Business Process Exception Management
BWR	Basic Work Request. SAP equivalent is BPEM.
CA	Contract Account
Channel	Data object in SAP that holds the interval data. Intervals can be kwh, price, factor, etc. SAP equivalent is Profile.
Clarification	A list of payments that could not be processed and require additional work in order to be posted.
Connection Object	Link between installation and postal regional structure. Usually a building, but can also be a piece of property or other facility, such as a fountain or construction site. The connection object corresponds to the functional location in plant maintenance (PM).
Contract	Standard SAP object that is used to link SAP Business Master Data and Technical Master Data through the move-in process
Customer	Any entity with a relationship with SCE. This term is usually used in reference to customers (both individuals and organizations) This can include employees and third party suppliers (banks and payment partners). SAP Equivalent is Business Partner (BP)
EAM	SAP Enterprise Asset Management
Front Office Process	Front Office Process or FOP is one of the SAP components that allows you to configure series of steps (or front office steps) in order to complete a transaction. The steps mostly contain the most frequent processes and most important information
Hybris C4C	SAP Cloud for Customer Solution
IMG	SAP Implementation Guide – where configuration is performed

Term or Acronym	Description of Term or Acronym used in this Document
Level Pay Plans	SAP equivalent term is Budget Billing. Budget Billing allows customers to pay regular equal amounts over a yearly period.
Mashup	This is part of standard C4C features allowing to integrate data from applications and online web services. SAP C4C has pre-configured mashups; they are as follows: • URL Mashup • HTML Mashup • Data Mashup • Custom Mashup
OA	Owner Allocation
Premise	Represents one of the SAP Technical Master Data object that is supplied with energy, for example, an apartment or factory. A premise can have several utility installations. The premise is allocated to a connection object and the address of that connection object
Property	Standard SAP object that is primarily used for arranging agreements with the owner concerning automatic move-in. It also stores an owner history for installations that are part of owner allocation process
S/4HANA	SAP HANA 4 Business Suite
SCE	Southern California Edison
Summary Billing	Standard SAP functionality that enables the invoicing of multiple Contract Accounts under one Parent Contract Account (Consolidated Summary Billing). SAP equivalent is Collective Billing.
TCODE	Transaction Code Description
TMD	SAP Technical Master Data e.g. Connection Object, Premise and Device Location

Additional terms may be found in APSE [General Document # 32 CSRP Glossary](#)

2 Business Process Design

2.1 Manage Owner Allocation Details

The SAP Owner Allocation process is utilized to facilitate agreements with property owners throughout the distribution area for an automatic New Contract (move-in) into the owner's name so that service remains on once the tenant has moved-out. The move in for the owner is triggered when a contract, which is a part of an active Property object in SAP, is ended. The exception to this is a final bill as a result of the dunning process. When a tenant is final billed due to non-payment, no move in to the owner will be triggered, reference relates to the same is available in the enhancement W-CIM-CS-14 - Landlord (workflow enhanced to automatically handle tenant move out and owner move in at vacant premise).

The Property object in SAP is a virtual object that is used to group one or more Service Locations and the service(s) within that location. The data model for properties will be a designed for single Premises-to-Property relationship. The Property object serves the purpose of identifying the location and/or services as relevant to an owner-tenant situation where the sites are linked to a valid, signed, and active Landlord agreement. A landlord agreement can be a signed agreement. The completed form is returned by the property owner authorizing to automatically put a contract in their name once a tenant calls for a move out. By signing the agreement, the property owner accepts that the utility estimates a meter read for move in and move out, unless an actual read is provided.

2.1.1 Property Reference Objects

Allocation to the Property can occur at one of three levels, as outlined below.

- Connection Object: When a Connection Object is allocated to a Property, all Premises and the Installations associated to those Premises are also allocated to the Property by default.
- Premise: When a Premise is allocated to a Property, all of the Installations associated to the Premise are allocated to the Property by default.
- Installation: When an Installation is allocated to a Property, the Installation alone is allocated to the Property.

These objects are called reference objects and need to be selected while creating the Property object.

Template Property

Reference object

☐ Installation

☒ Premise 6002526

☐ Connection Object

Division

☐ Property

☐ Owner

☐ Without reference object

Figure 1 – Create Owner Allocation

Any one of the reference objects can be used for the creation of property objects. For big apartment complexes, the property object can be created with the connection object as the reference so that each Premise located at the complex can be mapped under a single property object.

A property is not tied to an address, but they serve as a way to group sites together so an owner may assume the responsibility for commodity service. It is therefore permissible to include installations belonging to other premises to be grouped to a single property object.

As tenants move out of the premise the same contract account will be reused for the property owner at each automatic move in. If there is a dispute (eg. Property related issue, Billing related issue) between a tenant and the owner, the employee will attempt to resolve the dispute and if necessary, escalate it to their Lead and then to a Supervisor by creating a new Ticket in Hybris C4C if required.

An owner must have at least one contract account when setting up SAP Property Object. The system allows for one property owner who has multiple properties to have all under the same or separate contract account.

Each premise/installation within the property will always be turned on in the owner's name using the same contract account number. The Property object requires the service to be in the property owner's (BP) name or the tenant's (BP) name.

2.1.2 Landlord Agreement

A Landlord Agreement is a signed agreement by the property owner, which designates that they will take the responsibility for the service once a tenant moves out. The signed form can be provided back to SCE through email, postal mail or fax and sent to OTA team in CCC for

processing. If the Landlord Agreement is received by another department other than the OTA team, a BPEM Case will be created (the receiving department shall upload the OA application to the BPEM) via Hybris C4C for CCC OTA team for processing the agreement. The user will access into BDEx to view the list of BPEM cases assigned to them in the Personal Worklist via Dynamic WorkCenter (transaction code: /n/BTI/DWC) (Refer to Section 2.10 for details).

2.1.3 Property Object

An Owner Allocation Property object can be created, updated, or reversed by the OTA Team. This functionality currently only exists in the back office, but is currently part of the 1805 SAP release. There will be a standard view available in the Premise details which will show details of the owner, validity period and any additional activities for the owner allocation task.

The details of the Owner will also be available on the Premise data in S/4HANA.

Attributes		
Premise type	HSE	Single Family Residence
Owner	1002780	Kenzie Transfer / 560 Warbler Avenue / A
AuthorizGroup		

Figure 2 – Owner Details, Premise View

2.1.4 Owner Allocation Wait Time

- The day after a tenant is moved out of a location a workflow will generate the move-in for the owner at the location if there is not a pending move-in scheduled (for a new tenant) for that day. When the automatic move-in is created for the property owner, the system will automatically default to the rate category last billed to that property owner as defined by the enhancement W-CIM-CS-14 Landlord. The property owner's default rate category will be stored by enhancing the Installation screen via the enhancement E-CIM-CS-14 OA Screen.
- Property Owner's will be moved into the location by the workflow regardless of the time of the gap between tenants. Meaning the billable period for the property owner may be as short as 1 day.
- In the case that the tenant was moved out for dunning purposes the property owner will not be moved in automatically (APSE Action #[603](#)). The property owner would need to request a move-in or the current tenant a move-out. On the other hand, the owner will be moved in automatically by the enhancement W-CIM-CS-14 Landlord.

2.1.5 Property Number

The Property number will be a numeric ID automatically assigned in SAP based on the configured number range, interval for number range will be 5000000000 to 5999999999. This will be generated internally by the system during creation of the property object.

2.1.6 Creating the Owner Allocation

To create the OA, or the Property, OTA Team – CCC will first have to choose a reference object on the selection screen. After that the following fields must be entered while creating the property object:

- Key Date
- Owner (which is a BP)
- Contract Account
- Create event
- Additional activities
- Validity Periods

Create Owner allocation: Initial Screen

Property

Key Date 02/03/2014

Template Property

Reference object

☐ Installation

☒ Premise 6002526

☐ Connection Object

Division

☐ Property

☐ Owner

☐ Without reference object

Figure 3– Create Owner Allocation

Key Date

The key date field will signify the start date of the Landlord Agreement with the Owner of the Property. During conversion this date will be the contract date on the signed agreement.

Owner (BP)

The OTA Desk will specify the BP in the Owner field of the Property object. The agent will search for the BP with the information provided on the signed form. If the BP is not found, the agent will create the BP.

The Landlord Agreement form will be updated so that the BP can fill in their account information if they were a past or current SCE customer.

Create event

The create event flag will be checked so that the OA workflow initiates once a move out from the tenant is executed. Checking the Create Event flag causes a system-event to be raised on the

tenant move-out, thereby triggering the OA workflow if there is a signed Landlord Agreement with the Owner. If the box is not checked the owner is considered the owner of the property but will not be moved in. Based on current processes this will need to always be checked, an enhancement was logged and will automatically check this box at OA set up.

Additional Activities

Letter/Notification will be generated automatically by the enhancement W-CIM-CS-14 Landlord and will be sent on owner auto move-in and on cancellation of landlord agreement via OpenText based on customer preferences.

Contract Account

A new CA can be created for each property. The contract account will be used each time the owner takes over. The property object can only have one contract account associated to it. The enhancement W-CIM-CS-14 Landlord will be triggered to move the owner back into the premise automatically using this CA. A BPEM Case will be generated whenever there is an exception generated by the S/4HANA for the OTA Desk to perform the manual move-in via Hybris C4C. The user will access into BDEX to view the list of BPEM cases assigned to them in the Personal Worklist via Dynamic WorkCenter (transaction code: /n/BTI/DWC) (Refer to Section 2.10 for details). If the exception is a system issue, the employee will submit a defect ticket to IT.

Validity Dates

The validity dates will specify the seasonal period for which the Owner requests to take responsibility of the Property. Currently at SCE these validity dates would be left to the default of all year (1/1 to 12/31). SCE does not currently offer seasonal OA's, a decision was made to not offer such functionality at this time (APSE Decision #243). If SCE wanted to use a seasonal program going forward they could allow for owners to select plans such as winter (11/1 to 4/30) or summer (5/1 to 10/31).

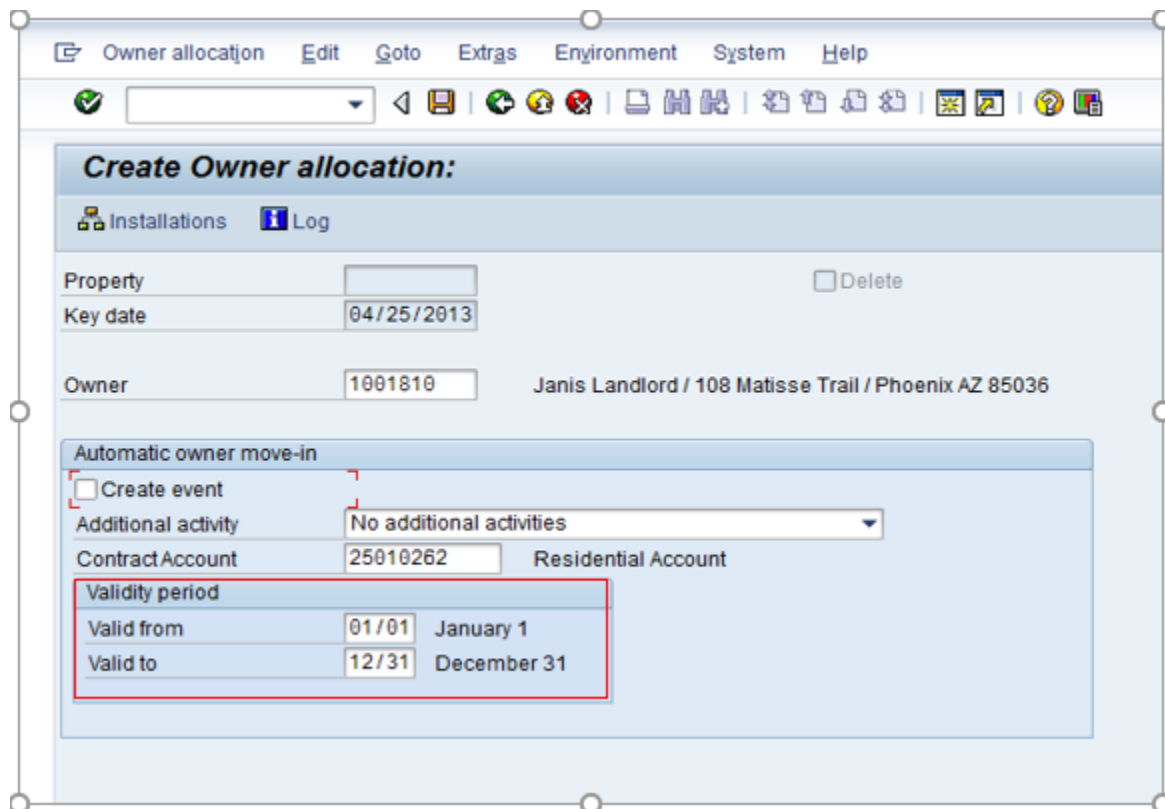

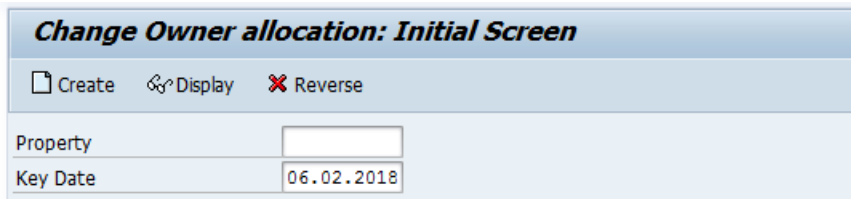

Figure 4 – Owner Allocation with Validity dates.

2.1.7 Changing the Owner Allocation

To change the existing OA, or the Property, OTA Team – CCC will first have to identify the property number on the selection screen. After that the following fields must be entered while creating the property object:

Change Owner allocation: Initial Screen

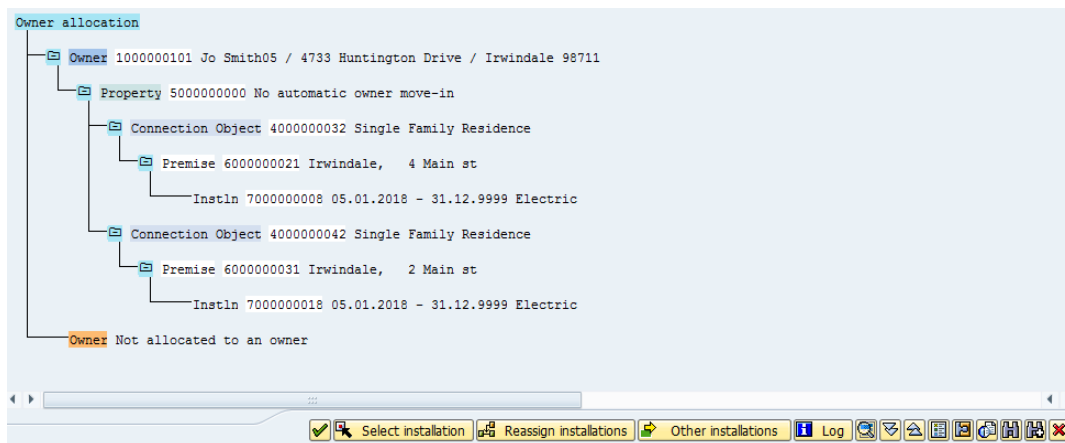

☐ Create ☐ Display ☒ Reverse

Property

Key Date

NOTE: The option Reverse is available when there is a need to remove the existing property when required.

When seeing the list of properties, a new property can be added and/or existing property can be removed based on the property owner's request.

The button Other installation will be used to add additional property as required (refer to Section 2.1.1) and Select/Reassign Installation can be used when there is a need to remove a property.

2.2 Process / Performance Improvement

- Able to search for the Business Partner and property information within the SAP system.
- One or more properties can be removed without affecting others within the same SAP property object.
- Ability to remove a property from one landlord OA agreement to a different landlord OA agreement within the same today. Today, we must wait at least one day before adding the property to another landlord OA agreement.

2.3 Prerequisites and Inputs

- Signed Landlord Agreement

- Business Partner
- Contract Account
- Installation

2.4 General Assumptions

- Duplicated Business Partners may still exist, despite the system controls to prevent users from creating duplicates. As a result, several properties may be created in error if the user does not locate the existing BP in the system prior to creating another.
- No Move In document is required to have an Owner Allocation Property in SAP
- OTA Desk users should have access to view, create, change and reverse OA's
- All users will have view access to OA's, while other users will have create, change, and reverse functionality.

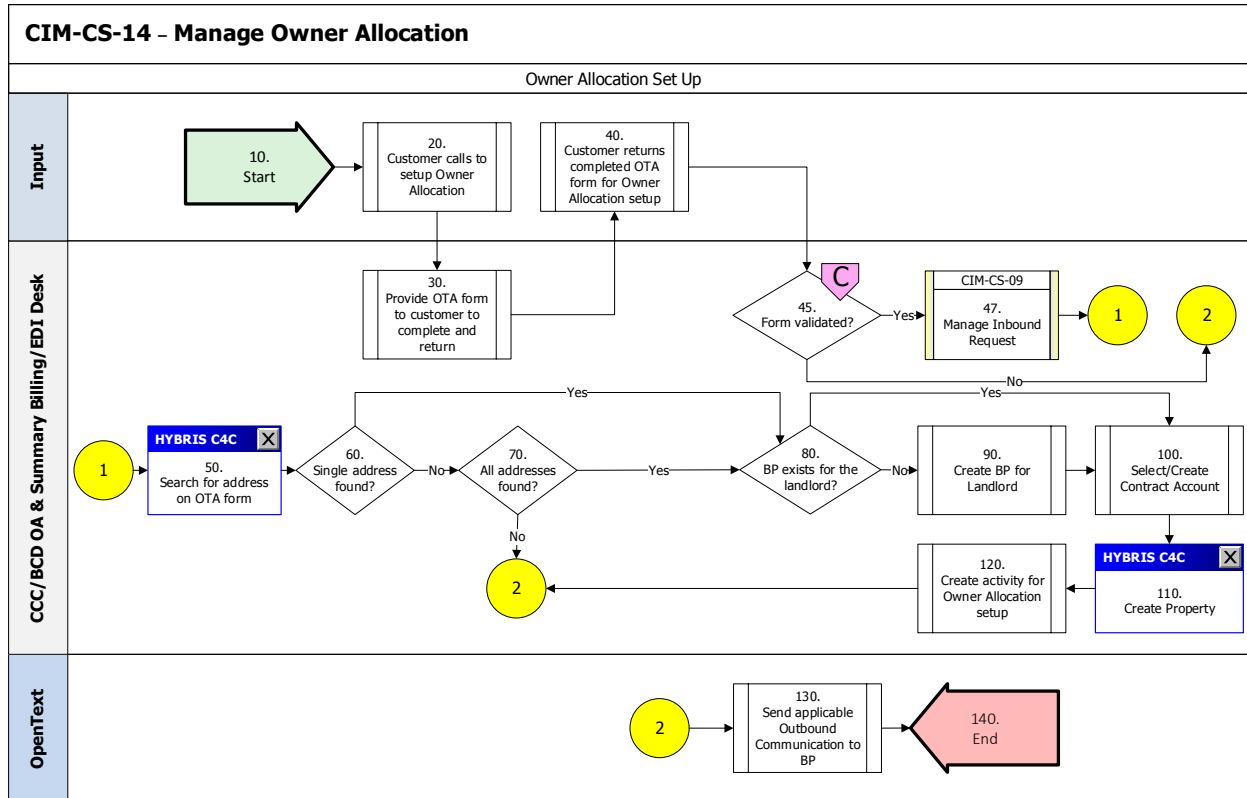

2.5 Business Process Hierarchy

Level 1 FO or BO	Level 2 Business Process(BPD)	Level 3(Sub Processes)	Level 4(SAP Transaction Codes)

2.6 Process Flows

2.6.1 Setting up Owner Allocation

This process flow is for setting up owner allocation based on the form provided by the landlord.

Process Flow Steps

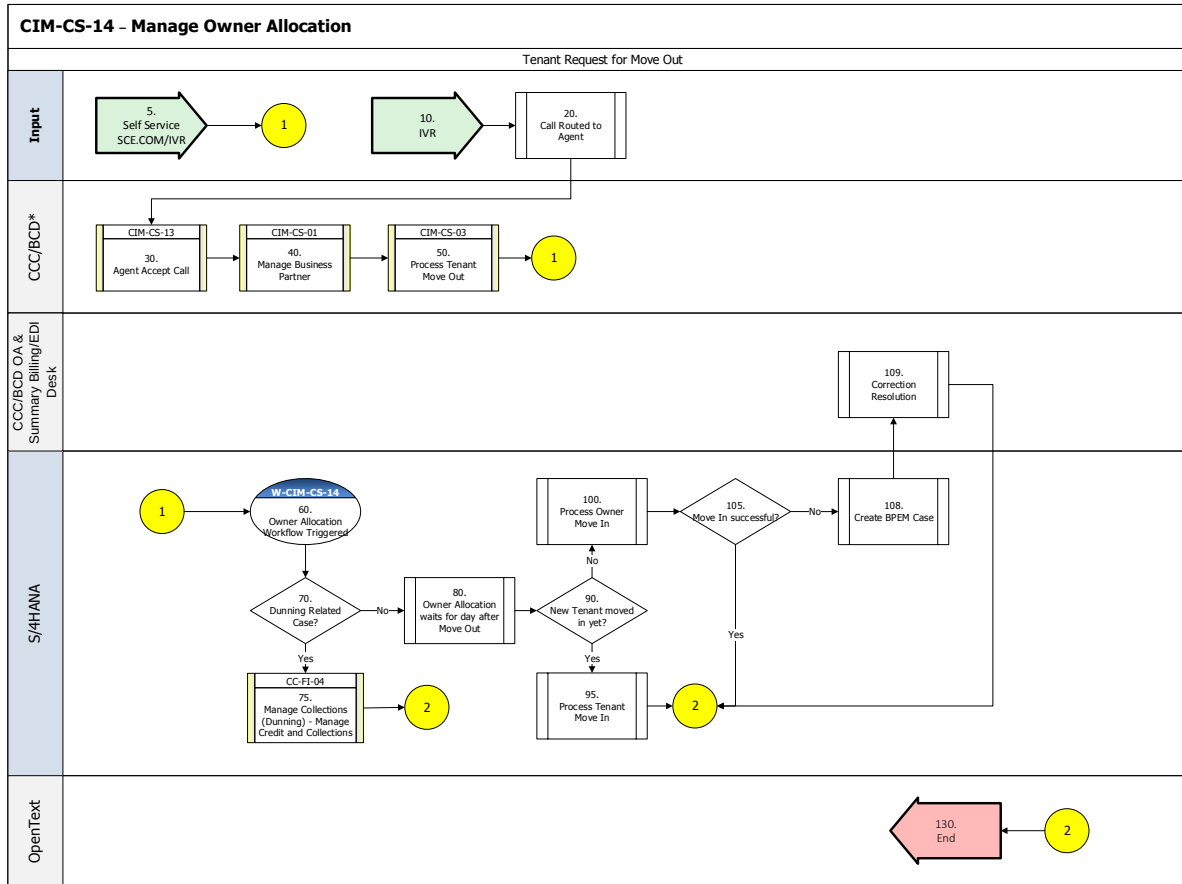

Step	Description of Step	Front Office/ T-Code	Role(s)
10	Start	N/A	N/A
20	Customer calls in for owner allocation setup If customer initiates process with CSR. Send Outbound Communication to Customer with form.	N/A	Customer
30	Provide OTA Form to Complete, Sign and Return by Mail If customer initiates process with CSR they are sent an OTA form for Owner Allocation Setup to complete. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
40	Customer Returns Completed OTA form OTA Form completed and returned to SCE Refer to process CIM-CS-09 for details on Manage Inbound Request.	N/A	Customer

Step	Description of Step	Front Office/ T-Code	Role(s)
45	Validate Information on Form Decision point, verify customer listed on OTA form matches Owner listed on Landvision. If Customer is Owner, proceed to step 47, if not proceed to step 110. CONTROL: OTA Desk employee reviews each received OTA forms to verify it is complete and has been signed by the property owner prior to creating the Owner Allocation (ie. Landlord agreement) in SAP ISU using its information	NA	CCC/BCD OA & Summary Billing/EDI Desk
47	Process CIM-CS-09 Manage Inbound Request This is to scan the document and store in the system. Go to step 50	NA	CCC/BCD OA & Summary Billing/EDI Desk
50	Search for Address on Form Each address on the form is found one at a time in Front Office premise search.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
60	Single Address Decision point needed, if customer listed only a single address proceed to step 80. Otherwise proceed to step 70.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
70	Address Found Decision point needed, if address is found, proceed to step 80. Otherwise, proceed to step 130. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
80	BP Exists for the Property Owner Decision point: once address is found need to find and confirm BP, if BP does not exist perform step 100. Otherwise, proceed to step 110	C4C	CCC/BCD OA & Summary Billing/EDI Desk
90	Create BP for Property Owner Business partner must be created for property owner. Refer to process CIM-CS-01 for details on Manage Business Partner.	C4C	CCC/BCD OA & Summary Billing/EDI Desk

Step	Description of Step	Front Office/ T-Code	Role(s)
100	Select/Create Contract Account Once BP is found need to find and confirm Contract Account (CA), if a CA does not exist the user must create a Contract Account. Refer to process CC-FI-01 for details on Manage Contract Account.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
110	Create Property With confirmed contract account and premise trigger transaction launch to create the property	C4C ES51	CCC/BCD OA & Summary Billing/EDI Desk
120	Create Activity for Owner Allocation Setup At this point an OA was requested and saved, the agent will create activity for owner allocation setup.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
130	Send applicable Outbound Communication to BP Send the customer the applicable Outbound Communication related to the success/failure of the OA set up.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
140	End The process comes to an end	N/A	N/A

2.6.2 Tenant Request for Move-Out

This process flow is for the owner allocation process when the workflow is triggered based on move-out.

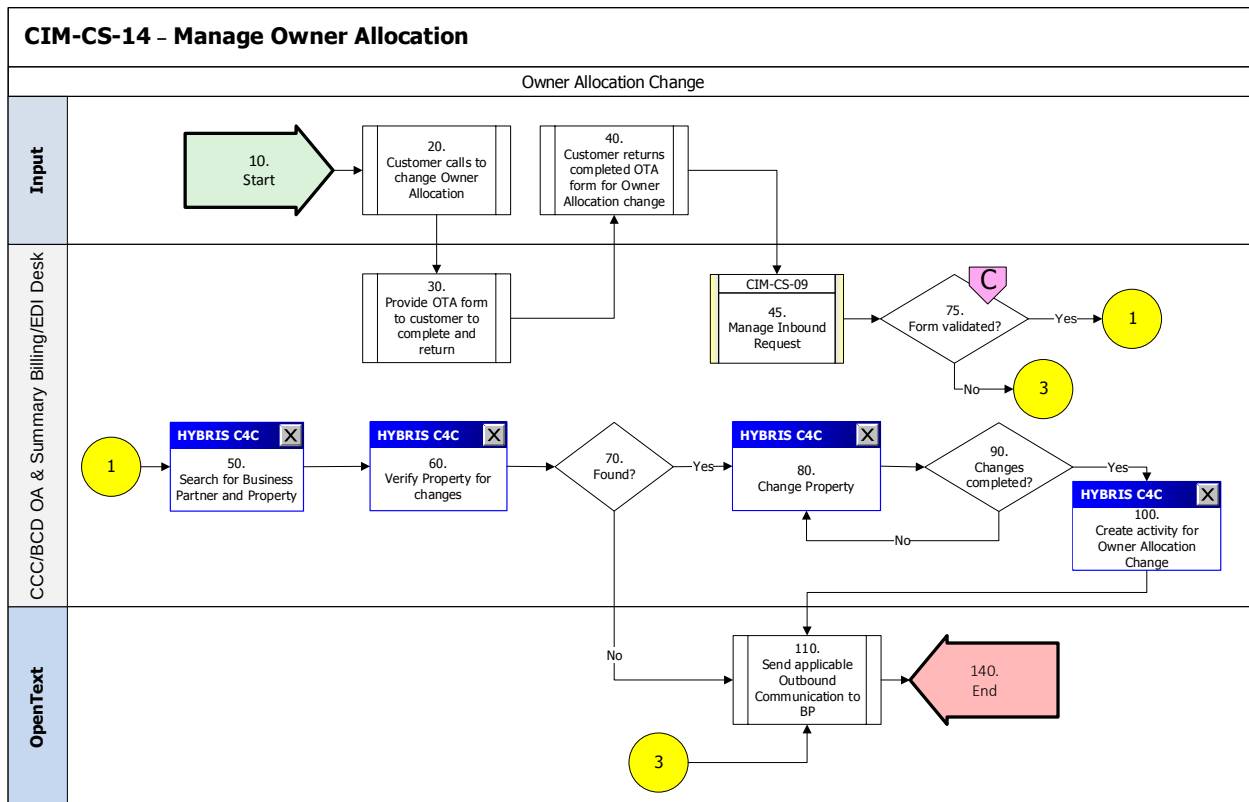

Process Flow Steps

Step	Description of Step	Front Office / T-Code	Role(s)
5	Self-Service Turn off Received (SCE.COM/IVR) Go to step 60	N/A	N/A
10	IVR Go to step 20	N/A	N/A
20	Call Routed to Agent Tenant call for move out from premise.	N/A	N/A
30	Agent Accept Call	N/A	N/A
40	Manage business Partner Confirm Business partner.	C4C	CCC/BCD

Step	Description of Step	Front Office / T-Code	Role(s)
50	Process Move Out Agent Process move Out. And go to step 60.	C4C EC55E	CCC/BCD
60	Owner Allocation workflow is triggered	N/A	N/A
70	Dunning Related Case? Decision Point, if the tenant was turned off due to dunning, proceed to step 75. Otherwise proceed to 80.	N/A	N/A
75	Manage Collections (Dunning) – Manage Credit and Collections (CC-FI-04) Tenant disconnected for dunning. Proceed to step 130.	N/A	N/A
80	Owner Allocation waits for day after move out	N/A	N/A
90	New Tenant Moved in Yet? Decision Point, if a new tenant move in is pending, new tenant will be moved in, otherwise, proceed to step 100.	N/A	N/A
95	Process Owner Move In (Refer to Process CIM-CS-02 Handle Customer Move-in/Out – Contract New) Once completed, go to step 130	N/A	N/A
100	Process Owner Move In (by W-CIM-CS-14 Landlord) The Property Owner will only be moved in if there is no tenant move in pending and previous tenant was not disconnected for dunning.	N/A	N/A
105	Move In Successful? Decision Point, if Yes, go to step 110. If not, go to step 130	N/A	N/A
108	Create BPEM Case Go to step 109	N/A	N/A
109	Correction Resolution To provide resolution the case assigned Go to step 130	/n/BTI/DWC	CCC/BCD OA & Summary Billing/EDI Desk
130	End Process comes to an end.	N/A	N/A

2.6.3 Changing Owner Allocation

This process flow is for the owner allocation changes requested by a landlord.

Process Flow Steps

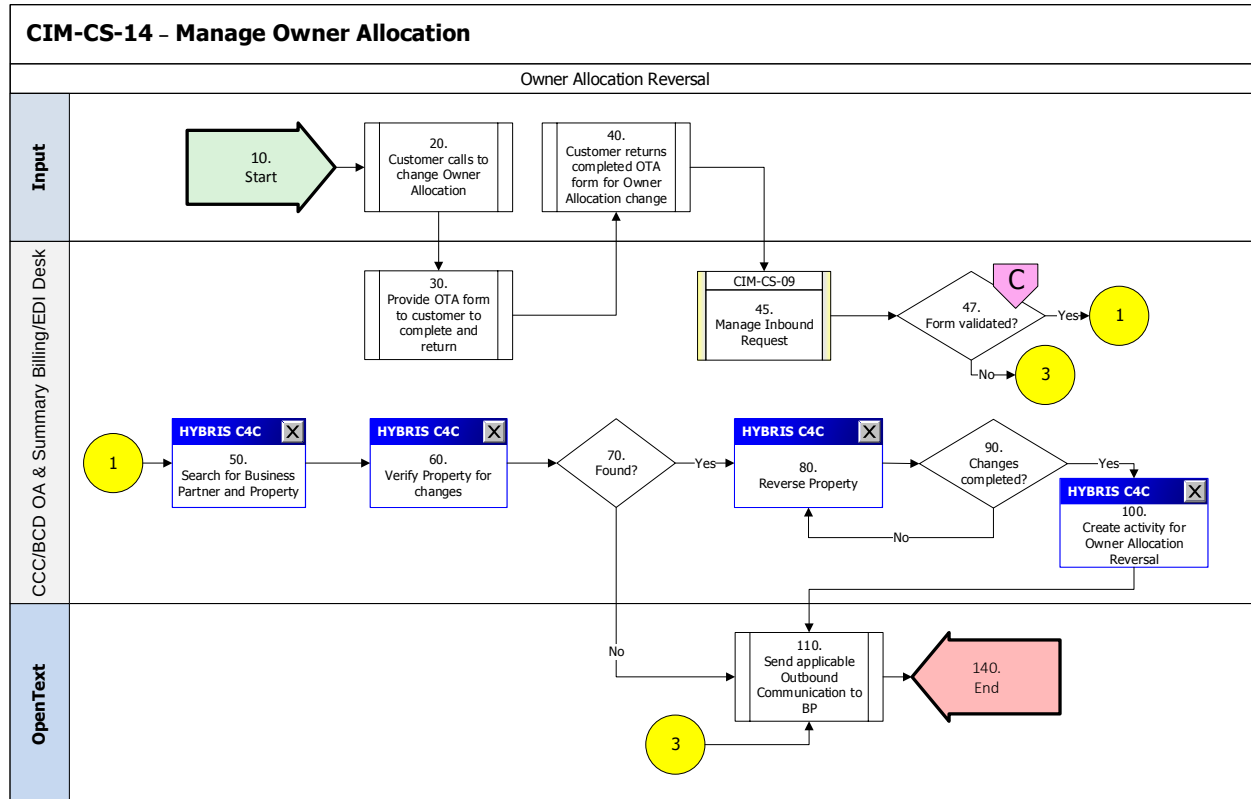

Step	Description of Step	Front Office/ T-Code	Role(s)
10	Start	N/A	N/A
20	Customer calls in for owner allocation setup If customer initiates process with CSR. Send Outbound Communication to Customer with form.	N/A	Customer
30	Provide OTA Form to Complete, Sign and Return by Mail If customer initiates process with CSR they are sent an OTA form for Owner Allocation Setup to complete. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk

Step	Description of Step	Front Office/ T-Code	Role(s)
40	Customer Returns Completed OTA form OTA Form completed and returned to SCE Refer to process CIM-CS-09 for details on Manage Inbound Request.	N/A	Customer
45	Process CIM-CS-09 Manage Inbound Request This is to scan the document and store in the system. Go to step 50	NA	CCC/BCD OA & Summary Billing/EDI Desk
47	Validate Information on Form Decision point, verify customer listed on OTA form matches Owner listed on Landvision. If Customer is Owner, proceed to step 50, if not proceed to step 110. CONTROL: OTA Desk employee reviews each received OTA forms to verify it is complete and has been signed by the property owner prior to creating the Owner Allocation (ie. Landlord agreement) in SAP ISU using its information	NA	CCC/BCD OA & Summary Billing/EDI Desk
50	Search for Address on Form Each address on the form is found one at a time in Front Office premise search.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
60	Verify Property for changes Verify the document with what's been updated in the S/4HANA and provide changes as requested.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
70	Property Found Decision point needed, if property is found, proceed to step 80. Otherwise, proceed to step 110. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
80	Change Property Provide changes to the property object. This can be either the information in the property and/or assign or de-assign new/existing premise respectively	C4C	CCC/BCD OA & Summary Billing/EDI Desk
90	Changes completed Decision point: If yes, proceed to step 100. If not, complete the changes as required.	C4C	CCC/BCD OA & Summary Billing/EDI Desk

Step	Description of Step	Front Office/ T-Code	Role(s)
100	Create Activity for Owner Allocation Change Create activity to log interaction with the customer request. Proceed to step 110	C4C	CCC/BCD OA & Summary Billing/EDI Desk
110	Send applicable Outbound Communication to BP Send the customer the applicable Outbound Communication related to the success/failure of the OA set up.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
140	End The process comes to an end	N/A	N/A

2.6.4 Reversing Owner Allocation

This process flow is for the owner allocation reversal requested by a landlord. This can involve one or more premises to be assigned/de-assigned or the entire property object.

Process Flow Steps

Step	Description of Step	Front Office/ T-Code	Role(s)
10	Start	N/A	N/A
20	Customer calls in for owner allocation setup If customer initiates process with CSR. Send Outbound Communication to Customer with form.	N/A	Customer

Step	Description of Step	Front Office/ T-Code	Role(s)
30	Provide OTA Form to Complete, Sign and Return by Mail If customer initiates process with CSR they are sent an OTA form for Owner Allocation Setup to complete. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
40	Customer Returns Completed OTA form OTA Form completed and returned to SCE Refer to process CIM-CS-09 for details on Manage Inbound Request.	N/A	Customer
45	Process CIM-CS-09 Manage Inbound Request This is to scan the document and store in the system. Go to step 50	NA	CCC/BCD OA & Summary Billing/EDI Desk
47	Validate Information on Form Decision point, verify customer listed on OTA form matches Owner listed on Landvision. If Customer is Owner, proceed to step 47, if not proceed to step 110. CONTROL: OTA Desk employee reviews each received OTA forms to verify it is complete and has been signed by the property owner prior to creating the Owner Allocation (ie. Landlord agreement) in SAP ISU using its information	NA	CCC/BCD OA & Summary Billing/EDI Desk
50	Search for Address on Form Each address on the form is found one at a time in Front Office premise search.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
60	Verify Property for changes Verify the document with what's been updated in the S/4HANA and provide changes as requested.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
70	Property Found Decision point needed, if property is found, proceed to step 80. Otherwise, proceed to step 110. Refer to process CIM-CS-11 for details on Manage Outbound Request.	C4C	CCC/BCD OA & Summary Billing/EDI Desk

Step	Description of Step	Front Office/ T-Code	Role(s)
80	Change Property Provide changes to the property object. This can be either the information in the property and/or assign or de-assign new/existing premise respectively	C4C	CCC/BCD OA & Summary Billing/EDI Desk
90	Changes completed Decision point: If yes, proceed to step 100. If not, complete the changes as required.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
100	Create Activity for Owner Allocation Change Create activity to log interaction with the customer request. Proceed to step 110	C4C	CCC/BCD OA & Summary Billing/EDI Desk
110	Send applicable Outbound Communication to BP Send the customer the applicable Outbound Communication related to the success/failure of the OA set up.	C4C	CCC/BCD OA & Summary Billing/EDI Desk
140	End The process comes to an end	N/A	N/A

2.7 3rd Party and SCE Legacy System Integrations

3 rd Party or SCE Legacy System Integration	Description of Integration and Required Change to 3 rd Party or SCE Legacy System	Estimated Complexity of 3 rd Party or SCE Legacy system change
Not Applicable		

2.8 Data Elements

There will be four processes involved within managing the Owner Allocation in SAP and they have the same data elements:

- Create Owner Allocation
- Change Owner Allocation
- Display Owner Allocation
- Reverse Owner Allocation

2.8.1 Owner Allocation Data Elements

Field	Type	Comments
Owner	Required	This is the BP number of the Property owner.
Contract Account	Required	This is the CA used for the creation of new Contract for the owner.
Create Event	Required	Flag to specify if auto move in will occur. This will default as checked via enhancement.
Validity Dates	Optional	Validity period of landlord agreement; default to 0101 and 1231.
Key Date	Required	Date from which Owner Allocation property is valid
Property	Required	Represents the Technical master data groupings to be associated to the property owner's account at the time of auto-move in.
Installation	Required	Represent a specific service a property owner has requested to be part of Owner Allocation property.

2.8.2 Source Systems and Data Volumes

- Source: CSS System
- Data Volume: There are around 345,000 properties in SCE which translates to around 1,000,000 installations related to owner allocation.

2.9 Cloud for Customer (C4C) Integration

2.9.1 Processes

Owner Allocation Setup can be done via C4C system, option will be available for front office agent to create/change/reverse/display via Front Office Process (FOP) or Mashup.

2.9.2 C4C Views

Screen will be available (by calling Owner Allocation transactions from the back office) in C4C system where Owner BP will be visible with the tenant master data. Front office agent will be able to view OA with standard views and will also be able to create, change or reverse via transaction launcher.

2.9.3 Activity

A new Activity can be created after the property owner request has been created or changed in the system.

2.10 Exception Management Requirements

Below are the Exception management requirement for Owner Allocation Process

User Exception Scenario / Description	User Group	Initiated by	Work Distribution
Get triggered when an active OA exists but the Owner is not moved in when the tenant moves out due to any unexpected reason except dunning related case	OTA Desk	System	Push
When an OTA application is received by another group, they will need to attach the OTA application.	OTA Desk	User	Push
If research is needed to be conduct on an account (ex: pulling original contracts and/or documents)	OTA Desk	User	Push

CIM-CS-14 Manage
Owner Allocation Ex

2.11 Process Risks and Mitigation

Only CCC OTA desk and Summary Billing/EDI desk users will have access to create, update, and reverse OA. All other users will have view only access.

Risk Statement	Mitigation
There may still be duplicated BP in the new system due to human error	Routine data cleansing will have to be done in order to reduce the number of duplication to mitigate the risk
If the "Create Event" field is not checked by the user during OA set up, the system will not initiate workflow to move-in the owner upon the tenants move-out	Enhancement E-CIM-CS-14 OA Screen has been identified to mitigate the risk and ensure that the field is pre-selected for the user
If the OTA is lost then SCE does not have legal rights to execute the agreement. (Ties to high level risk: Noncompliance or misinterpretation with regulatory and legislative requirements may lead to misstatement of financial statements, penalties, fines and/or prosecution from governing regulatory bodies.)	OTA Desk employee reviews each received OTA forms to verify it is complete and has been signed by the landlord prior to creating the Owner Allocation (ie. Landlord agreement) in SAP ISU using its information"

2.12 Key Performance Indicators

The following have been identified as KPI's at Southern California Edison, along with the means of measuring each KPI and the current measurement statistic for each KPI:

Measured KPI	Description	Measurement Method	Current Statistic
N/A			

(Refer to the general document in APSE –[General Document #31](#))

2.12.1 Key Metric Definition

The following have been identified as key metrics at Southern California Edison that require business rule for calculation:

Key Metric	Description	Business Rule	Reference
N/A			

3 Controls and Regulatory Rules

Completeness of the data:

- Owner Master Data (ex.BP, CA) and tenant Master Data (BP, CA, active Contract) will be identified as required to set up owner allocation.

Validity of the data:

- The property owner listed in the property object will have to be set up as a BP.
- The premise can only be listed under one Property.

Accuracy of the data:

- Back office agents will be trained to look for any pending move-ins before they cancel a landlord agreement.
- All required fields must be completed and if not, the employee will need advise the property owner to resubmit the form.
- If an address(es) is not found in our system, the employee will need to advise the property owner to resubmit the form.

Restricted access to the data:

- BCD, CCC OTA desk and Summary Billing/EDI desk users will have access to create, update, and reverse OA. All other users will have view only access.

Requirement ID (from RTM)	"As-Is" Control Requirement	"To Be" Risk Statement	"To-Be" Control Activity	Control Automation (manual, IT dependent- manual, automated)	Relevant technical identifier or RICEFW reference
New		<i>If the OTA is lost then SCE does not have legal rights to execute the agreement. (Ties to high level risk: Noncompliance or misinterpretation with regulatory and legislative requirements may lead to misstatement of financial statements, penalties, fines and/or prosecution from governing regulatory bodies.)</i>	<i>OTA Desk employee reviews each received OTA forms to verify it is complete and has been signed by the landlord prior to creating the Owner Allocation (ie. Landlord agreement) in SAP ISU using its information". (Step 45)</i>	<i>Manual</i>	<i>N/A</i>

3.1 Security Considerations

Role	Transaction Code (T-Code)	T-Code Description	Authorization Attributes	SOD Conflicts (Yes/No) If SOD Conflicts Yes. Identify the 2 conflicting t-codes
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	C4C (Workcenter: Call Center)	Create Owner Allocation	Create	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	C4C (Workcenter: Call Center)	Change Owner Allocation	Change	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	C4C (Workcenter: Call Center)	Display Owner Allocation	Display	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	C4C (Workcenter: Call Center)	Reverse Owner Allocation	Reverse	
Owner Allocation Processing – CCC/BCD	C4C (Workcenter: Call Center)			
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	/n/BTI/DWC	Dynamic WorkCenter	View	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	ES51	Create Owner Allocation	Create	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	ES52	Change Owner Allocation	Change	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	ES53	Display Owner Allocation	Display	
Owner Allocation Processing – CCC/BCD OA & Summary Billing/EDI Desk	ES54	Reverse Owner Allocation	Reverse	
Owner Allocation Processing – All Users (Billing/Credit, GC Services, CCC, & BCD	ES53	Display Owner Allocation	Display	

3.2 Custom Program/Transaction Codes

Custom Program	Authorization Grp	Custom T-code	Authorization Object used in the authorization check statement
N/A			

3.3 Custom Table/Transaction Codes

Custom Table	Authorization Grp Assigned	Custom T-code for the Table	Table Access (display/update)
N/A			

4 Technical Considerations

4.1 RICEF-W Assessment

All of the Forms, Reports, Interfaces, Conversion items, Enhancements and Workflows (RICEF-W) that have been identified for this BPD are detailed in the tables below and will represent the totality of all RICEF-W items documented at the time of sign-off of this BPD. Any RICEF-W items that are identified after this BPD receives final sign-off will only be managed within Southern California Edison's APSE environment and not within this document.

1.1.1 Reports

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
The system shall enable a user to generate a report listing all the properties that are enrolled in an owner tenant agreement for a landlord by BP, including all service addresses and their participation status.	M	R-CIM-CS-14 Owner Allocation by Parameter Report

1.1.2 Interfaces

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
N/A		

1.1.3 Conversion

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
ISUPROD (Owner Allocation)	M	C-CIM-CS-14 - PROPERTY

1.1.4 Enhancements

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
The system allows the users to create, change, and display owner allocation (With the event checkbox pre-checked)	M	E-CIM-CS-14 OA Screen
The system shall automatically determine if a service address is eligible to be enrolled in an owner tenant agreement (e.g., based on property classification similar to Landvision website) and if not, not allow the user to enroll the property.	M	E-CIM-CS-14 OA Eligibility

1.1.5 Forms

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
OTA Application Form	M	F-CIM-CS-14 OTA Form
Letter/Notification sent to customer once tenant move-out and owner move-in	M	F-CIM-CS-14 Letter to Owner after tenant moves out

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
Automated Letter to owner once tenant Move in	M	F-CIM-CS-14 Letter to owner automated move in
OA Cancellation and OA Cancellation (New Party Application)	M	F-CIM-CS-14 OA Cancellation
List of Properties for BP (OTA Property List Letter)	M	F-CIM-CS-14 List of Properties for BP
OA Declined Rule #5 and #6	M	F-CIM-CS-14 OA Declined Rule #5
OA Missing Information	M	F-CIM-CS-14 OA Missing Information

1.1.6 Workflows

Description (include the Business Purpose)	Complexity (L, M, H, VH)	Reference ID
Landlord (workflow enhanced to automatically handle tenant move out) - Tenant dunning - Property owner default of rate category, - Owner move in at vacant premise - Owner CCA/DA Opt-out status - Tenant reversal: Deposit/energy charge adjustments	M	W-CIM-CS-14 – Landlord

4.2 IDEX Considerations

- If a tenant moves in or moves out to a premise either in CCA or DA territory, the enrollment or de-enrollment will occur in the background based on the IDEX pre-defined rules occurring in UB-ID-01 Section 4.2-IDEX consideration..
- If an owner moves back in to the premise, the enrollment status will be carried over based on the IDEX pre-defined rules

4.3 Production System Cut-over Considerations

Active and/or future landlord agreements will need to have both Business Partner and Contract Account created. As part of the cutover process, a communication to the property owners will be required to provide the new Property numbers assigned in SAP.

4.5 Other Considerations

- N/A

5 Change Management

5.1 Change Impacts

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
The SAP Property object is the link of an owner to a premise associated with a business partner, contract accounts and premise. There can be multiple SAP property objects if you are going to solo bill each of the units or can have 1 property object with multiple contracts and premise associated with it. Users will need to be trained on the new Owner Tenant Agreement (OTA) property object	Process	CS-CSOD-CCC All. CS-BCD-All	Low	Low
The Owner Tenant Agreement (OTA) indicator in SAP is a field with the owner's name and is located at the business partner level. The current indicator in CSS is an icon. Users need to go to a separate window to determine the name of the owner	Process	CS-CSOD-CCC All, CS-BCD-All	Low	Low

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
SAP has the ability to set up the owner allocation before the meter is set. SCE can add the contract as early as new construction and we will have the ability to bill owner as soon as meter is set with minimal idle usage. Currently a meter is required to add an OTA contract.	Process	CS-CSOD-CCC All, CS-BCD-All	Low	Low
In SAP, the tenant will have to request a move out or the owner will need start service to reconnect after a dunning lock has been issued. Presently, a move out is issued if a tenant is in disconnect for 30+ days. This new process should benefit the owner who will now take responsibility when they call in for service. Users will need to advise owners the reason for the service being off and will need to issue a move in request for the owner.	Process Benefit/Improvement, Job Roles	CS-CSOD-CCC All;CS-CSOD-RSO-Credit;Ext-Customers-Residential;Ext-Customers-Commercial/Industrial;CS-BCD-All	Medium	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Authorized users will be able to run Owner Allocation reports in SAP. Currently no reports are available for OA information. The OTA team can request for data from CSS from another group. Data can be used by the OA team to determine the number of OA customers, number of contracts associated with OA's etc. OTA team will be able to obtain customer information and program enrollment data when needed.	Benefit, Improvement/ Decision Making, Job Roles	CS-CSOD-CCC All	High	High

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Customer Contact Center (CCC) will need to convert current OTA documents (email, fax etc.) into soft copies (pdf's etc.) to attach to the BP level. This will allow the OTA team to store documents at the BP and open text. It will save storage space of hard copy documents as well as provide the front office visibility to the contracts for inquiries. This will increase customer satisfaction and first call resolution. Currently all OTA documents are hard copies and stored until they are archived. If research is required, the OTA team needs to find and pull out the contract.	Process; Benefit/Improvement; Culture Shift; Technology	CS-CSOD-CCC All;CS-BCD-All	Low	Low

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
The Owner Allocation paper contract can be canceled for the previous owner and begin a new paper contract for a new owner for the same premise on the same date. The functionality to end and start a new contract is currently a pain point for the OA desk and can be alleviated with this ability. Customers currently have to wait for the next business date to begin a new OA contract which may cause a disruption in service.	Benefit/Improvement; Process	CS-CSOD-CCC-OLS	Medium	Medium
The OA desk will need to contact the customer for follow up on certain OA exception cases to ensure that OA workflow completes as needed. Currently the OA desk does not make customer contact. They typically will send the response back to the agent to follow up with the customer.	Culture Shift; Decision Making; Job Roles	CS-CSOD-CCC All	Low	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
During post conversion, if the owner has any questions regarding their contract, the Owner Allocation (OA) desk will need to search in 3 locations to search for documentation depending on when the OA contract was started. Current OA contracts will not be added in SAP unless the CCC adds these contracts post implementation. Only new OA's will have the contract attached at the BP level. For any disputes regarding OA contract information, the desk will need to search different locations (e.g. sharepoint, paper copy etc.) for a copy. As more new paper contracts are received, the OA desk will store all paper contracts within SAP.	Benefit/Improvement; Process; Decision Making	CS-CSOD-CCC All	Low	Low

Below is a description of each:

Change Element Short Description: Describes the 'As-Is' scenario and what is changing.

Change Impact Category: Determined by asking the questions below.

1. **Staffing Levels** - Is the work effort increasing or decreasing (staffing levels), and how (e.g., task automation, new process/tasks)?
2. **Job Roles** - Will the responsibilities, authority, or required skills for a job or job roles change? Will people be reporting to new leaders? Will managers' responsibilities change?
3. **Compensation / Performance** - Will the changes have such an impact on roles of an individual that merits a change in how they are compensated or how their performance will be evaluated? What behaviors are rewarded and recognized?

4. **Organization Structure** - Is the ownership of the Process or Data changing (think departments, jobs, or roles, not individuals)?
5. **Decision Making** - Will any of the changes impact how decisions are made, by or between, business units / departments? Who makes them, how they determine the criteria for making a change?
6. **Culture Shift** - Will organizational value systems impact the way change happens or be impacted by the change? What are the underlying values of the organization that will directly influence the way change will be accepted and how much work will ultimately be required to ensure successful outcomes for the business?
7. **Location / Facilities** - Will the change impact the physical location where the process is being implemented or require changes to the facilities to enable the process to be effective?
8. **Process** - Any change to the current process (e.g. manual process becomes automatic, or vice versa)? Are there new processes being introduced or an old process being decommissioned? Is there a requirement to change an existing business rule or business policy? Will new business rule or policy needs to be introduced and enforced or complied to?
9. **Regulatory/ Legal** - Are there any legal / regulatory requirements that might be impacted
10. **Technology** - Are other applications impacted (e.g., going away, becoming read-only), or are there new requirements (e.g., new SW / HW, new version)
11. **Benefit/Improvement** - Will there be an improvement or benefit to any of the stakeholders because of this change. (Be sure to include any pain points that are being alleviated)
12. **Other** - Are there emotional implications stemming from any of these changes (think of buy-in issues or fears)

Audience Group(s): These are the affected departments, divisions etc...

Impact: The following were used to determine the impact:

Level	
	HIGH BUSINESS OUTCOMES: Drives change to cost, efficiency, customers.
	- JOB: More than 40% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: - Shift from manually intensive role to using new tools and systems - Employee is going to be redeployed - High level of "technical or functional" changes needed for a particular group - Significant changes to culture & attitudes to get job done - Big shifts in accountability or reporting (autonomy, responsibility, decision making, etc.)
	RELATIONSHIPS: High level of "relational" changes for a particular group (e.g. reporting relationships, effective working relationships with customers, teams, and stakeholders etc.)
	POLICIES/PROCEDURES: Processes, procedures, and/ or policies are not in place today and need to be defined.
	REGULATORY REQUIREMENT: drive changes to the way we comply

Level	
MEDIUM 	• BUSINESS OUTCOMES: Limited change to cost, efficiency, customers. • JOB: 20-40% of individual's job will change and / or additional skills are required with significant changes to Job Documents, Examples include: • Employee job title or function is modified, resulting in minor to moderate changes to roles and responsibilities. • There will be some changes to the culture & attitudes • Shift from moderate technology use to using new tools and systems • Moderate level of "technical or functional" changes needed for a particular group • Moderate shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) • RELATIONSHIPS: Moderate level of "relational" changes for a particular group (e.g. reporting relationships) • POLICIES/PROCEDURES: Processes, procedures, and/or policies are inconsistent today and not defined or documented in many cases • REGULATORY REQUIREMENT: No impact.
Level	
LOW 	• BUSINESS OUTCOMES: No impact. • JOB: Less than 20% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: • Employee job title or function is slightly modified with few, if any, changes to roles and responsibilities • There will be little change to the culture & attitudes • Shift from using some technology to new systems & tools • Light level of "technical or functional" changes needed for a particular group • Small shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) • RELATIONSHIPS: No impact or light level of "relational" changes for a particular group (e.g. reporting relationships) • POLICIES/PROCEDURES: Processes, procedures, and/or policies are consistent, but not well documented, and will need to be documented/ Other minor changes to be made. • REGULATORY REQUIREMENT: No impact.

Business Effort: Initial assessment of the impact to the business High, Medium, Low
