1 Business Process Overview

Customers may call SCE with questions related to their account status or to request changes. The front office employees may need to analyze the account to determine if a payment was processed, determine if a deposit is needed or if other action is needed on the account. To complete the inquiry process, the users may simply provide the information that the customer requested, they may need to perform financial adjustments/reversals in the system or forward the request to another department for investigation/completion.

Types of general inquiries and account history requests other than Credit Inquiries are:

- Billing Inquiry
- Energy Advice Request
- E- Bill
- Field work

1.1 Current Pain Points for Southern California Edison

- HEAP/EAF/Private pledges do not always payoff the customer balance which can result in a pledge that is over / under customer account balance
- Customers must remember to call to make arrangements on the remainder of the balance that is not covered by the pledge
- Call center has limited visibility in CSS / CWO for the Ext. / PA created by Revenue Protection in RPIS system
- Current payment posting priority rules creates issues (ex. customer makes payment expecting it to apply to the arrangement but instead it applies to the most recent bill and they default on the arrangement). Results in a lot of calls into the call center
- Lack of consistency across channels for eligibility and offers are inconsistent. Results in customer shopping channels / agents.
- Customers are not required to remain current on their current bill
- SCE.COM seems to have intermittent issues where claimant is not able to complete the online version of the claim form

1.4 Terminology

Term/Acronym	Definition and SAP Equivalent (if applicable)
APSE	Accelerated (or Axon) Project Support Environment
BDEX	SAP add-on functionality to support the processing of BPEM Cases
Billing Cycle	Is a group of contracts to be billed together via date-driven or regional criteria, it controls the billing cycle and is linked to the Meter Reading Unit. SAP equivalent term is the Portion.
Billing Document	A document that outlines the charges incurred for energy consumption for a specific contract. During the process of Billing, a billing document is generated for each contract on a contract account.
BMD	Business Master Data. The customer information which includes personal details, payment terms, dunning levels, billing rates and rate categories. The business master data objects are Business Partner, Contract Account and Contract.

Term/Acronym	Definition and SAP Equivalent (if applicable)
BWR	Basic Work Request. SAP equivalent is BPEM.
CA	Contract Account
Channel	Data object in SAP that holds the interval data. Intervals can be kwh, price, factor, etc. SAP equivalent is Profile.
Clarification	A list of payments that could not be processed and require additional work in order to be posted.
Connection Object	Link between installation and postal regional structure. Usually a building but can also be a piece of property or other facility, such as a fountain or construction site. The connection object corresponds to the functional location in plant maintenance (PM).
Customer	Any entity with a relationship with SCE. This term is usually used in reference to customers (both individuals and organizations) This can include employees and third-party suppliers (banks and payment partners). SAP Equivalent is Business Partner (BP)
BPD	Business Process Design (or Document)
BPEM	Business Process Exception Management
EAM	SAP Enterprise Asset Management
Hybris C4C	SAP Cloud for Customer Solution
IMG	SAP Implementation Guide - where configuration is performed
Level Pay Plans	SAP equivalent term is Budget Billing. Budget Billing allows customers to pay regular equal amounts over a yearly period.
S/4HANA	SAP HANA 4 Business Suite
SCE	Southern California Edison
Summary Billing	Standard SAP functionality that enables the invoicing of multiple Contract Accounts under one Parent Contract Account (Consolidated Summary Billing). SAP equivalent is Collective Billing.
TMD	SAP Technical Master Data E.g. Connection Object, Premise and Device Location

Additional terms may be found in APSE [General Document # 32 CSRP Glossary](#)

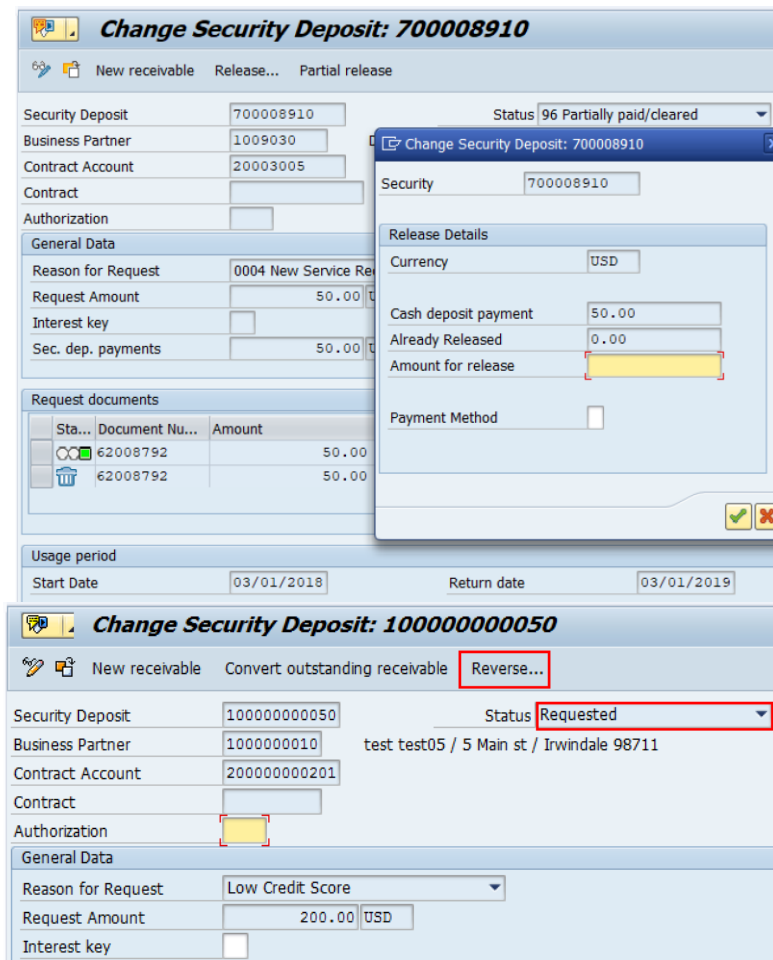

2 Business Process Design

2.1 Handle Customer Inquiries Details

A Business Partner (BP) may contact a Front Office user with a variety of questions regarding their Contract Account (CA), which can be answered using various screens in Hybris C4C.

2.1.1 Security Deposit

A Security Deposit may be requested on a CA according to SCE business rules. The Security Deposit may later be dispersed by either the full or partial deposit amount for a variety of reasons, as discussed in BPD [CC-FI-03: Manage Credit – Manage Security Deposit](#). Releasing a Security Deposit can be completed via FOP to Hybris C4C (t-code FPSEC2) (Figure 1: Change Security Deposit). A Security Deposit can also be refunded back to the Business Partner (BP) via FOP to S/4HANA (t-code FPE2) (Figure 2: Refund Security Deposit) which will be discussed in BPD [CC-FI-22 – Handle Account Adjustments \(FICA\) – Manage Customer Refunds](#). If Security Deposit was created by the Move In process, user will first have to reverse the created Security Deposit via FOP to Hybris C4C (t-code FPSEC2) (**Figure 1: Change Security Deposit**), and then create a new Security Deposit via FOP to Hybris C4C (t-code FPSEC1) (**Figure 3: Create Security Deposit**).

2.1.2 Collections

A user will be able to determine if a customer is currently in collections or final call via the Open Items tab in Hybris C4C (Figure 4: Open Items).

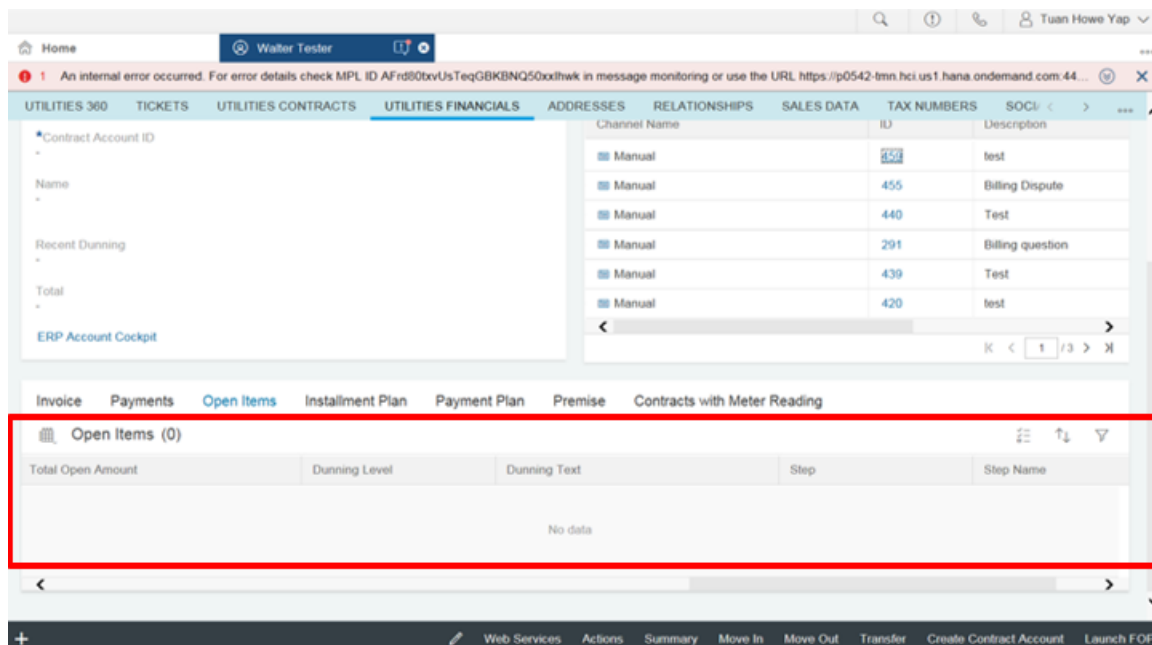

Figure 4: Open Items

If it is determined the customer is in collections, the representative may create an Installment Plan for the customer upon request via Hybris C4C. If there is any dispute or possible error made by SCE that requires further investigation, the user may need to extend the due date on the account balance to avoid customer disconnection by placing a Dunning Lock in Hybris C4C (**Figure 5: Create Lock**). This process makes the BP exempt from Collection activities until a specific date. The creation of Dunning Locks in Hybris C4C will be covered in BPD [CIM-CS-17: Front Office](#). Regardless of the user's action, they should also add an Activity record on the BP indicating action taken on the account (e.g., Installation plan, dunning lock, etc.).

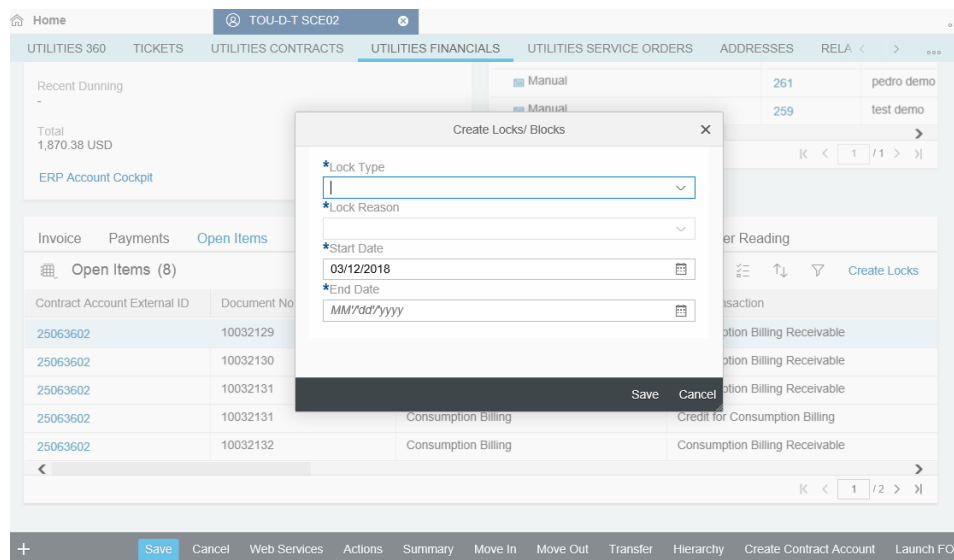

Figure 5: Create Lock

If a BP's service has been disconnected for non-payment and sufficient payment has been made to reconnect service, or when payment has been made in full, the system will automatically issue a

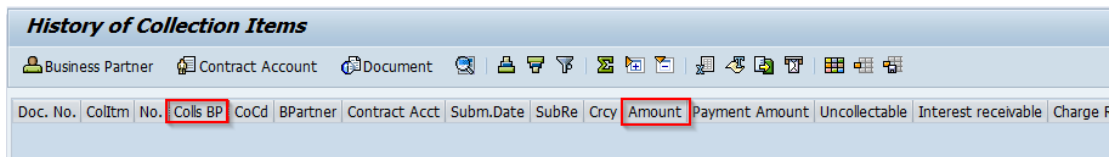

reconnect order for the Contract Account. This process will be covered in BPD [CC-FI-04: Manage Collections \(Dunning\) - Manage Credit and Collections](#).

If needed, a reconnect order can be issued manually via FOP to S/4HANA (t-code: EC86) (**Figure 6: Change Disconnection Document**). Creation of Reconnection Orders is covered in BPD [DF-WM-03 - Handle Remote Orders - Manage Remote Orders](#).

Figure 6: Change Disconnection Document

Collection Agency Inquiries

When a BP calls to inquire regarding a past due balance that has gone to a Collection Agency, the user will navigate to S/4HANA (t-code FP03H) via Hybris C4C FOP. The user can obtain Collection Agency/3rd party information, such as the collection amount in addition to the collection agency phone number and contact information. The Collection Agencies will be created as a BP's in SAP and the system will display the Collection Agency name & phone number. This BP number will be stored in the open items 'Collection BP' field (**Figure 7: History of Collection Items**) for the Contract Account. The user will be required to navigate to Hybris C4C BP Master View to obtain the Collection Agency Name and Contact information by the designated BP number.

Figure 7: History of Collection Items

2.1.3 Payments

Currently Hybris C4C does not have functionality to accept one-time payments. If the customer needs to make a payment, the user will guide the customer back to the available self-service payment channels to make a guest payment via IVR or SCE.com.

For IVR payments, the user will determine if the caller wants to make a one-time payment or to add their checking account information to the system for future use. If the caller wishes to save the checking account information, the user will add/update the checking account information in the BP master data. Once completed, the user will drop the caller back into the IVR so that the caller can easily complete their payment request. If they wish to only make a one-time payment, when the call is dropped back in the IVR, the IVR will prompt the caller to enter the checking account information.

Another option to accept payment will be for the user to navigate S/4HANA (t-code FPAY1A) via Hybris C4C FOP (**Figure 8: Create Payment Specification**) and perform a one-time payment. The user needs to select the document line items for the payment amount. Refer to [PY-FI-09 - Receive Payments - Manage Incoming Payments](#) for more information on one-time payment and perform a one-time payment, partial payment and overpayment.

No data							

Figure 9: Payments

If the customer has made a payment to SCE but the payment is not found in the BP's Payment view, the user will create a BPEM case 'Credit - Misapplied Payment/Payment Inquiry' for CAPS to check on the missing payment. CAPS will attend to the BPEM using S/4HANA Clarification Cases (tcode FP30C) to check list of payment based on Clarification # on payment date or user id. Clarification Cases (Figure 10: Clarification Cases) contain a list of payments that are not processed due to missing attributes. If the missing payment is not found in Clarification Cases screen, the payment could be applied to the wrong

account. CAPS can execute a self-service report in S/4HANA with a list containing the entire listing of payments received by SCE.

Figure 10: Clarification Cases

Payment Search

Standard SAP has transaction codes which can be used to search for payments. A scenario such as a customer calling SCE to report a missing payment.

If CAPS is unable to locate payment in a Clarification Case, CAPS can navigate to S/4HANA Payment Lot: A User-Defined Search by Payments (**Figure 11**: Payment Lot: User-Defined Search by Payments) via tcode FP30H that has the capability to search for payments based on the payment date, payment amount and Search Key (check numbers). Standard SAP has the capability to limit the search criteria and allows a user to search for a specific payment by the payment date and payment amount.

Note - Search Key – SAP searches Payment database tables using the Bank Account Number or Check Number from the Search key. Users can conduct a direct search for the Payment Amount and Payment Date to find all the relevant payments.

Other Search Parameters:

Document Date, Payment Amount, Payment Lot (WF* denotes payments from Wells Fargo) and number of payments.

Payment Lot: User-Defined Search by Payments

Search using Bank Account Number or Check Number

Search Criterion: Search Query

☒ Contains All Search Values ☐ Contains At Least 1 Search Val ☒ Error-Tolerant Search

05-010218-04	1		100.00	USD								04/25/2018	☐	

Users can double click on line items and see the details of payment postings.

If it is determined that a payment needs to be transferred from one contract account to another, this can be done manually via FOP to S/4HANA (t-code FP40) (Figure 12: Transfer Items). The process of transferring payments will be covered in BPD [CC-F1-12: Handle Account Adjustments \(FICA\) - Manage Transfer Postings](#).

Pending Agency Payments

In some cases, customers receive donations towards their outstanding balance from agencies (EAF, HEAP or Private Pledges). If the amount owing can be consolidated and settled by one payment, a payment extension should be granted. If the agency payment only partially settles the amount owing, the user will create an Installment Plan (

Figure 13: Payment Extension / Installment Plan). Installment Plans with a sub type for an agency will be created to allow a pending agency payment to process based on the BP's request. If the customer calls in and needs a change to the Agency installment plan to include arrangements for the amount above the pledge amount, the user can cancel the original Agency Installment Plan and set up a new Agency Installment plan to include the full balance.

Agency Pledges for a BP can be viewed when looking at the payments in Hybris C4C. The user should also add an Activity record on the BP indicating why the installment plan or extension was placed on the account.

The screenshot shows the 'Create Installation Plan' dialog box in SAP S/4HANA. The dialog is open over the 'Utilities Service Orders' screen. The 'Contract Account ID' is 12000000120. The 'Plan Type' is set to 'Start Date'. The 'Start Date' is 11/11/2023. The 'Rounding Amount' is 0.00. The 'Charge Amount' is 0.00. The 'Installation Amount' is 0.00. The 'Plan Category' is set to 'No data'. The dialog has buttons for 'Save', 'Cancel', 'Simulate', and 'Launch'.

Figure 13: Payment Extension / Installment Plan

EFT Payments

In the event an EFT (Electronic Fund Transfer) payment needs to be reversed, the user will need to manually create a Ticket then a BPEM case using the category "EFT Reversal". The BPEM will be routed to the RSO Payment Services Team for issuance of the refund.

Authorized Payment Agency

If a customer inquires about an Authorized Payment Agency (APA) location, the user can access [FETCH](#) or [SCE.COM](#) to assist the customer with the request. APA locations can be found on [SCE.COM](#) by using city or by zip code search. Customers can also obtain APA location information via IVR.

Owner Allocation/Landlord Agreement Inquiries

If a business partner (owner) calls regarding an Owner Allocation dispute (Billing, Credit related issues), the user can create a Ticket to Offline Support if they are unable to resolve the caller's inquiry.

2.1.4 Refunds

If a user needs to issue a refund check for an account that has a credit balance, this can be accomplished via FOP to S/4HANA (t-code FPE2) (**Figure 2: Refund Security Deposit**). Processing customer refunds will be covered in BPD: [CC-FI-22 – Handle Account Adjustments \(FICA\) – Manage Customer Refunds](#).

To locate the status of a refund check (i.e. cashed/not cashed), the user will navigate to S/4HANA Check Management (t-code FPCR). The user will select the option 'Checks for Cust.' and enter the BP number to received check details (**Figure 14: Check Management**). To verify the status of the refund checks that are escheated to the State of CA, refer to BPD [FN-FI-17 - Manage Unclaimed Monies](#).

If a refund check was cashed, but the caller is claiming they did not receive it, the user can send an indemnity correspondence to the BP via their preferred communication preference. Refer to BPD [CIM-CS-11 Manage Outbound Request](#) for handling of correspondence. If the BP sends the completed form back to SCE, SCE will investigate the issue further and take appropriate action.

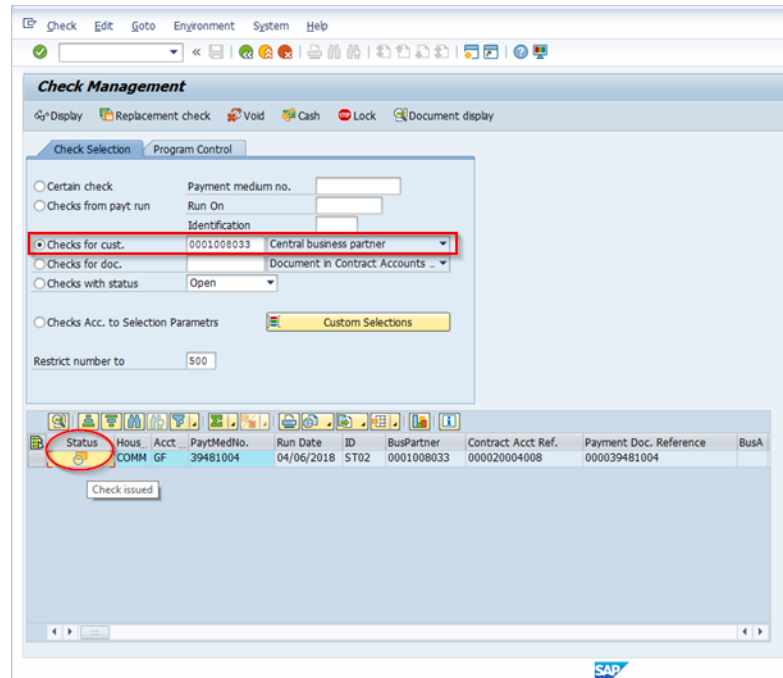

Figure 14: Check Management

2.1.5 Credits

A credit can be issued to a BP by a user while performing a policy adjustment via FOP to S/4HANA (t-code FPE1) (**Figure 15: Post Document**). If the credit exceeds business rules, the user can then create a Ticket and route it to a supervisor or authorized party for approval and completion of the adjustment, the allowable limit (e.g. \$750) and approval process is documented in [CC-FI-22 - Handle Account Adjustments \(FICA\) - Manage Customer Refunds](#). SCE will further define the business process on limiting the ENAs policy adjustment amount during BPP (e.g. \$25 max for ENA1)

Service Guarantees

There are 4 Service Guarantee Types; (1) Missed Appointments [+/- 30 minutes], (2) Restoration of service within 24 hours, (3) Notification of Planned Outages and (4) Timely and Accurate first bill.

The user will have the ability to view if a service guarantee credit has already been applied to an account and specific service guarantee type (main and Sub transaction description of the manual credit) by reviewing the Account Balance Overview screen via Hybris C4C and Activity and BP Contact history. If no credit has been applied to the account, for the specific instance the caller is inquiring about, the user will need to create a Ticket 'Credit – Service Guarantee Inquiry' and then BPEM to the appropriate department to investigate the account.

Missed Appointment – create BPEM 'Service Guarantee Inquiry – Missed Appointment'

Restoration of Service within 24 hours – create BPEM 'Service Guarantee Inquiry – Outage >24 hrs'

Notification of Planned Outage – create BPEM 'Service Guarantee Inquiry – Maintenance Outage Notification'

Timely and Accurate first bill – create BPEM 'Service Guarantee Inquiry – Timely/Accurate first Bill'

Change Name Only (CNO)

Sometimes, due to a marriage, divorce, or other circumstance, customers request a name change on their account. To complete a Change Name Only (CNO) order in Hybris C4C the user will go to the Business Partner in Hybris C4C and make the necessary change to the Business Partners Name.

If the customer is requesting to move the service from one Business Partner to another Business Partner, the user must complete a Move out for the existing Contract Partner/Sold-To-Party and initiate the Move in for the new Business Partner.

Deceased

If customer calls to inform SCE that the Contract Partner/Sold-To-Party has departed. The user will request a death certificate as evidence. If the customer requests the service in their name, the user can perform a new Move in for the new Business Partner. In the event that there is no new party to take responsibility for the service, the user would need to have received the death certificate or confirmation that the requesting party is authorized to take action on the account to process the Move out request. Once received, the user (Back office) will perform a Move out under the Deceased Business Partner and

update the BP as Deceased. The Front Office user should not update the BP record as Deceased and would create a BPEM to credit with the death certificate received from the customer attached to write off any final charges are not paid. See [CIM-CS-09 - Manage Inbound Request](#) for Inbound Documentation handling.

2.1.6 Fee Waiver

A user may need to waive a fee in certain instances (e.g. late payment charge, reconnect fee) which will be done by creating a miscellaneous posting via FOP to S/4HANA (t-code FPE1)(**Figure 15:** Post Document). Miscellaneous postings are discussed in greater detail in BPD [CC-FI-15: Handle Account Adjustments – Manage Miscellaneous Postings](#).

Should a Business Partner (BP) request UUT exemption, the representative can create a BPEM using category “Request UUT exemption”. This process is further discussed in BPD [CIM-CS-07: Handle Bill Inquiries](#).

2.1.7 Programs and Products

A BP may contact a user regarding Programs and Products, which may include Demand Response (DR) events and/or rebate information. DR events will be covered in BPD [PP-CS-04-01: DR Event Tracking - Program Level, Participant Level and Notification Results](#). Additionally, customers may also seek information regarding rebates, representatives will be able to view historical and pending rebate information for a BP via Mashup to iEnergy ([E-CIM-CS-02: Transaction Launcher](#)). Users can also view the program enrollment status for a customer (e.g., DR, EE, billing, payment, etc.) in Hybris C4C. Refer to BPD [CIM-CS-17 - Front Office](#).

2.1.8 Activities, Tickets and BPEMs

2.1.8.1 Activities

The user will log an Activity after resolving the Business Partners (BPs) inquiry. The Activity can be used to document what was discussed and/or if additional follow-up is needed.

Users can utilize a Self-Service Credit Inquiry report based on the type of activities created. The report provides initial customer contact information (i.e. customer name, phone number, employee who handled the call, reason for contact), and displays the frequency of customers that contact SCE multiple times for the same issue.

2.1.8.2 Tickets

If the user is unable to resolve the inquiry and the issue needs to be sent to another Front Office group, a Ticket (**Figure 16:** Create Ticket) in Hybris C4C will need to be manually created. To create a Ticket, the user will select a Ticket Category and sub category. If the user selects Billing as the ‘Ticket Category’, then the system will enable the user to select sub categories from a drop down list associated to Billing.

User may assign the Ticket to another user using the 'Assign To' field or the user can assign the Ticket to a work group using 'Team' field. In order to submit the Ticket, user needs to enter the Ticket title in the 'Subject' field as this is also a mandatory field. Information entered in the Subject field will appear in the Report for Tickets listing view (**Figure 18: Report for Tickets**). 'Priority', 'Requested Start Date' and 'Description' are additional fields that are available for user to capture information.

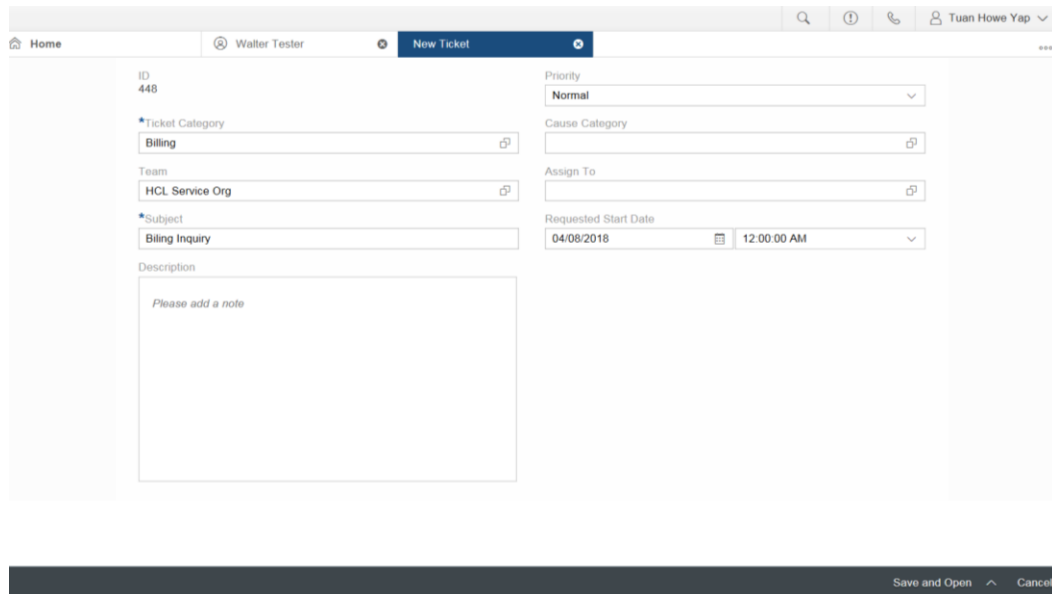

Figure 16: Create Ticket

Report for Tickets

A report for Tickets is available in Hybris C4C (**Figure 18: Report for Tickets**). It provides high level information about the Tickets without user double clicking on each Ticket that appears in the Report for Tickets view. Using this report, the user can see the list of tickets assigned to him/her, the total number of tickets, and tickets that have been created in the last 7 to 365 days. There are some Ticket search criteria pre-defined by SAP such as 'My Ticket', 'My Team Ticket', 'Ticket Status' or the user can define new search criteria.

No	Ticket Service Category/Sub Category	Subject Title	Department / Person
Refer to attached worksheet			

2.1.8.3 BPEMs

If a user is unable to resolve the inquiry and the issue needs to be sent to someone in the Back Office group, a BPEM case will be created manually in Hybris C4C and routed to the appropriate back office workgroup for resolution. A Ticket must be created manually in Hybris C4C prior to creating BPEM case (Figure 20: BPEM Case Creation). Upon creating the BPEM case, the user will also be able to select an appropriate category.

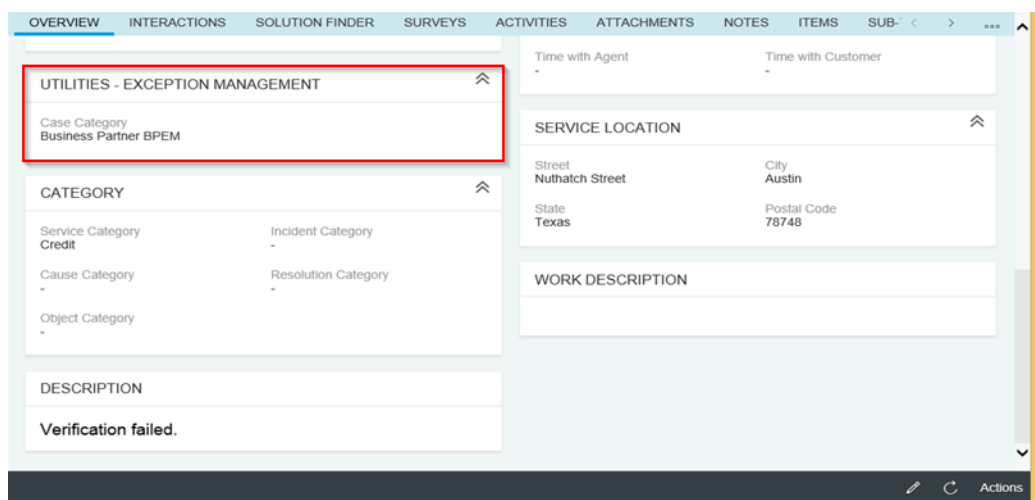

Figure 20: BPEM Case Creation

BPEM Cases can be modified by the Back Office in BDEX/S/4HANA to capture the status, root cause, and results of the inquiry. Once they have been resolved, the BPEM Case status will be updated by the Back Office

representative manually. In addition, user will need to update the Ticket status for that BPEM case. We will further define this process during the BPP phase.

A summary report of BPEM Cases is available in S/4HANA by using T-Code /BTR/PP_ASTROLABE to run the report and T-Code /BTR/PP_SUM to display the report. This report provides information regarding BPEM Status for each type of BPEM (i.e. new, in process, completed), the number of BPEMs in each status, creation date, and due date (Figure 21: BDEx Summary Report). The report will also help to locate the BPEMs that are associated to a Ticket using the creation date, BPEM case category, etc. To view more details for each BPEM case, the user can double click on the Key Number to open the case.

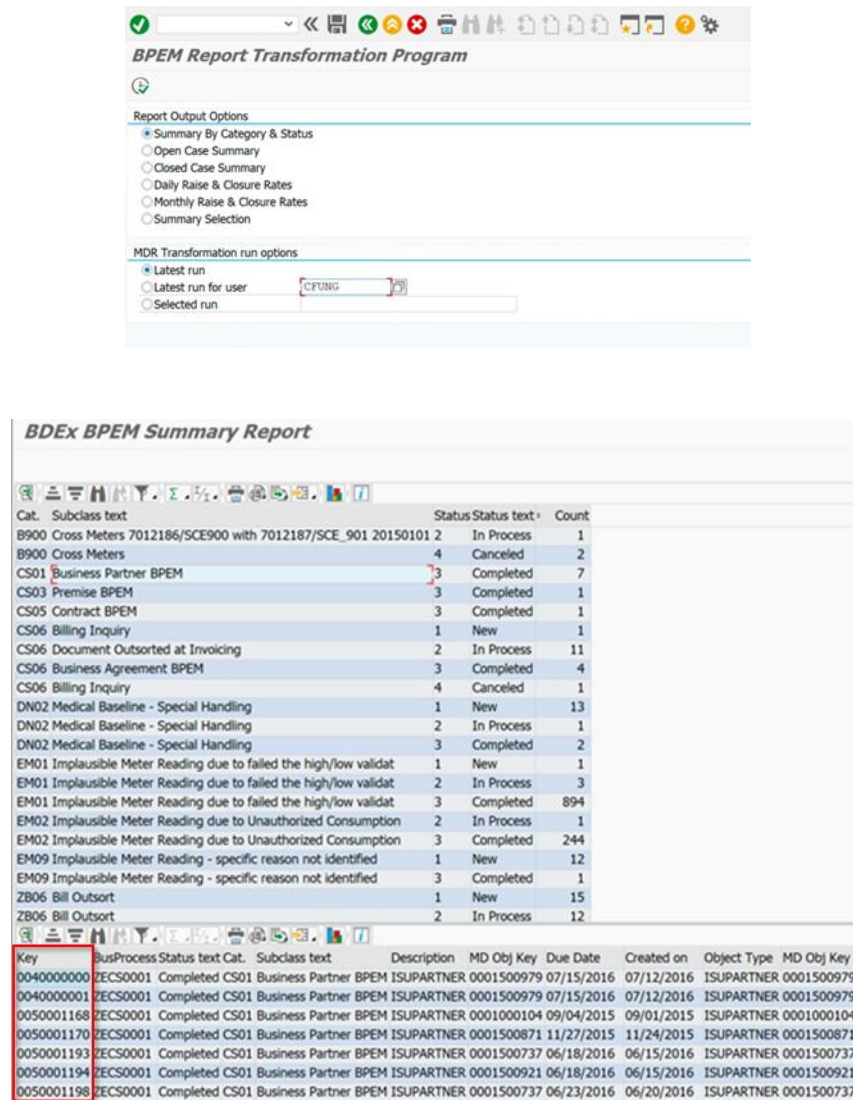

Figure 21: BDEx Summary Report

2.2 Process / Performance Improvement

- Improve the consistency of customer authentication to be consistent across all channels

- Business processes going forward will be traceable via Activity or Ticket.

2.3 Prerequisites and Inputs

- Business Partner
- Contract Account
- Contract

2.4 General Assumptions

- SAP is developing a BPEM view to display BPEM cases related to the customer
- SAP is developing a view which would provide the entire history of the collections
- Issuing of credits will be standard in C4C in 1805 or 1808 release
- CSRP and IT are working to define a solution to mitigate the issue that front office will not be able to accept a process a one-time payment from a customer using C4C. The workarounds to drop the caller in the IVR, send them to SCE.com or for front office use the complex S/4HANA process is not recommended.
- The SCE Credit Administrators will continue to notify BCD Account Managers via email or phone call when an 'assigned' business customer is entering pending disconnect.

2.5 Business Process Hierarchy

This Business Process Hierarchy provides a listing of all scenarios/business processes, sub-processes, and SAP Transaction codes identified to support this process.

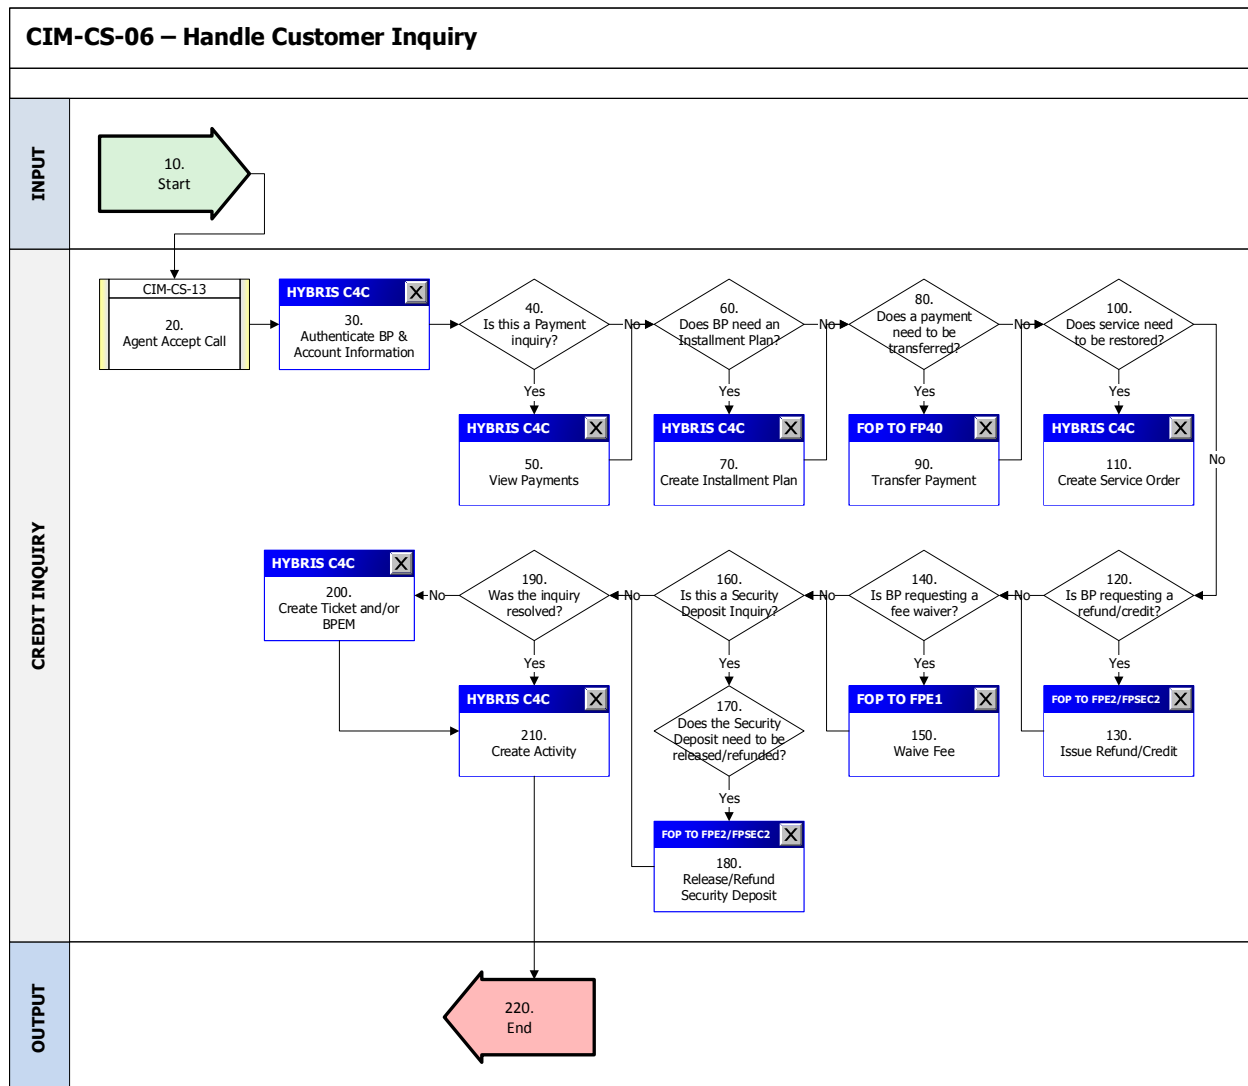

Level 1	Level 2	Level 3	Level 4
FO	Handle Customer Inquiries	General Inquiry	Hybris C4C
FO	Handle Customer Inquiries	Credit Inquiry	Hybris C4C

2.6 Process Flows

This BPD will cover 1 processes, including Handle Customer Inquiry. Each sub-section where the process is detailed will have a process flow diagram for that process and a table detailing the steps that are taken within that process, including processes handled outside of SAP.

2.6.1 Handle Customer Inquiry

Process Flow Diagram

Process Flow Steps

Step	Description of Step	ICWeb / T-Code	Role(s)	If step is relevant for a Control, add Requirement ID
10.	Start	N/A	CCC/BCD

200.	Create Ticket and/or BPEM If the inquiry was not resolved, create the appropriate Ticket and/or BPEM and route to the proper group for handling.	Hybris C4C	Credit Inquiry	
210.	Create Activity If the inquiry was resolved, create an Activity to document the results of what happened on the call.	Hybris C4C	Credit Inquiry	
220.	End	N/A	N/A	

2.7 3rd Party and SCE Legacy System Integrations

3 rd Party or SCE Legacy System Integration	Description of Integration and Required Change to 3 rd Party or SCE Legacy System	Estimated Complexity of 3 rd Party or SCE Legacy system change
N/A	N/A	N/A

2.8 Data Elements

The information that will be captured for the data elements related to Customer Inquiries (either as part of migration or in the course of normal processing) are defined in Section 2.1 above.

2.8.1 Source Systems and Data Volumes

The table below contains the data volumes of inquiries received:

Month	Inquiries Received 2015	Inquiries Received 2016	Inquiries Received 2017
Account Maintenance	1527403	1371062	1395173
Agency	21044	21829	20799
Billing	12532297	12241399	12559245
Credit	6434087	6219883	6217792
Deposit	865305	687668	637229

Month	Inquiries Received 2015	Inquiries Received 2016	Inquiries Received 2017
Direct Access	28943	21995	18719
Internet	406387	380302	384232
TOTAL	21815466	20944138	21233189

2.9 Cloud for Customer (C4C) Integration

2.9.1 Processes

Customer Inquiries can be handled in Hybris C4C and is available for Front Office agents to display, including search BP, search CA, search Premise, Utilities Overview, Tickets and BPEM

2.9.2 C4C Views

- Search BP
- Search CA
- Search Premise
- Utilities Overview
- Service Orders
- Security Deposit via FOP
- Collections Status via FOP
- Collection Agency Information via FOP
- Generate Reconnection via FOP
- Transfer Payments via FOP
- Issue Refunds via FOP
- Refund Status via FOP
- Issue Credit via FOP
- Miscellaneous Postings via FOP
- Payment Lot: User Defined Search by Payments via FOP

2.9.3 Activities

An Activity Record will be created by the user manually whenever there is a Bill Inquiry regardless if the bill inquiry is resolved. The content that is captured in the Activity Record's long text varies in different Customer Inquiry scenarios. Refer to [Customer Interaction BPD Call Disposition Type & Sub Type](#).

2.10 Exception Management Requirements

This section outlines a high level description of each BPEM Case or other user workflow items (such as “Tickets” used by Front Office) used to route work requests between business areas. The companion document for this section which outlines the detail of each case is documented in APSE on the [Exception Case Template General Document #8](#).

User Exception Scenario / Description	User Group	Initiated by	Work Distribution
Refer to Exception Case worksheet.			

2.11 Process Risks and Mitigation

All Risk Statements identified in this section must also be included in Section 3 - Controls, Regulatory Rules, and Security. If applicable, leverage [APSE Risk Statement Reference](#) to consider risks associated with the business processes in this document.

Risk Statement	Mitigation
N/A	N/A

2.12 Key Performance Indicators

The following have been identified as KPI’s at Southern California Edison, along with the means of measuring each KPI and the current measurement statistic for each KPI:

Measured KPI	Description	Measurement Method	Current Statistic
N/A	N/A	N/A	N/A

2.12.1 Key Metric Definition

The following have been identified as key metrics at Southern California Edison that require business rule for calculation:

Key Metric	Description	Business Rule	Reference
N/A	N/A	N/A	N/A

3 Controls, Regulatory Rules, and Security

Requirement ID (from RTM)	"As-Is" Control Requirement	"To Be" Risk Statement	"To-Be" Control Activity"	Control Automation (manual, IT dependent- manual, automated	Relevant technical identifier or RICEFW reference
N/A	N/A	N/A	N/A	N/A	N/A

3.1 Security Considerations

Role	Transaction Code (T-Code)	T-Code Description	Functional Restriction	Organizational Restriction
Credit Inquiry	Hybris C4C – Utilities Financials	Display Invoices, Payments, Open Items, Installment Plan, Budget Billing Plan, Create Locks	Display	
Credit Inquiry	EC86	Change Disconnection Order (Generate Reconnection via FOP)	Change	
Credit Inquiry	FPE1	Post Document (Miscellaneous Postings via FOP)	Create	
Credit Inquiry	FPE2	Change Document (Issue Refunds via FOP)	Change	
Credit Inquiry	FPM3	Display Dunning History (Collection Status via FOP)	View	
Credit Inquiry	FPSEC1	Create Security Deposit	Create	
Credit Inquiry	FPSEC2	Change Security Deposit	Change	
Credit Inquiry	FPSEC2	Reverse Security Deposit	Reverse	
Credit Inquiry	FP40	Transfer Items (Transfer Payments via FOP)	Create	
Credit Inquiry	FPCHR	Check Management (Refund Status via FOP)	View	
Credit Inquiry	FP03H	History of Collection Items (Collection Agency Information via FOP)	View	
Credit Inquiry	/BTR/PP_ASTROLABE	Run BDEx Report	Run	
Credit Inquiry	/BTR/PP_SUM	Display BDEx Report	View	
Credit Inquiry	FPAY1A	Payment Specification	Run	

3.2 Custom Program/Transaction Codes

Please identify any custom programs/transaction codes that need to be developed for RICEFW objects. Include RICEFW Reference ID from APSE in RICEFW Reference ID column.

The following details should be identified and captured in their respective RICEFW Functional/Technical specs

- Is the custom program executed in the batch mode or dialogue mode
- Is the custom program assigned to an authorization group
- What is the custom transaction code for the custom program
- Should there be an authorization check made against any field in the custom program/custom t-code and if so what is the custom/standard authorization object used(For example does it have to be restricted to residential vs commercial customer)
- Does the custom programs/custom t-codes have any critical or sensitive customer information that needs extra security

Custom Table	Authorization Grp Assigned	Custom T-code for the Table	Table Access (display/update)	RICEFW Reference ID
N/A	N/A	N/A	N/A	N/A

3.3 Custom Table/Transaction Codes

Please identify any custom tables/transaction codes that need to be developed for RICEFW objects.

Include RICEFW Reference ID from APSE in RICEFW Reference ID column.

The following details should be identified and captured in their respective RICEFW Functional/Technical specs

- Are there any customer sensitive/critical Z tables created
- What is the authorization group assigned to the table
- Is it just a maintenance or display only table
- What is the Z transaction code for the custom table

Custom Table	Authorization Grp Assigned	Custom T-code for the Table	Table Access (display/update)	RICEFW Reference ID
N/A	N/A	N/A	N/A	N/A

3.4 Data Criticality and Cybersecurity Baseline Risks

Specify the Information this BP will process, receive or transmit;	List data elements from section 2.8 here, including volume.			
	Data element	Description	Volume	Risk (high , medium, low)
Specify Access Classification /Special Handling or Regulatory Requirement	☐ <Select all that apply> ☐ PII - Personal Identifiable Information / Privacy Law ☐ CEII - Critical Energy Infrastructure Information ☐ FERC SOC (Standards of Conduct) ☐ NERC CIP Confidential			

	☐ Sarbanes-Oxley (SOX) financial reporting data ☐ SCE utility data accessible by affiliate companies (CPUC) ☐ PCI - Payment Card Industry Compliance ☐ Customer Information Service Request (CISR, CISR-DRP) ☐ Other _<Please Specify>_ ☒ Internal ☐ Public									
Please identify which business Group/Role will require access to the data and/or solution:	<Select all that apply> ☒ SCE Customer, Res./Comm. Customer; ☒ SCE OU, Business Function Organization Name: RSO, CCC, BCD ☐ Vendor ☐ External business partner(s) & SaaS providers ☒ External on-shore contractors ☒ External off-shore contractors ☐ SCE Affiliate Company Employees ☒ SCE Employees, specify if they have Marketing Function responsibilities (e.g., ES&M) ☐ SCE contract workers ☐ Regulatory Agencies ☐ Others _<Please Specify>_									
How many of the SCE Customer, Employee, Venodors will use or affected by the Business Process?	1,000+.....									
How much Information/data would be processed, received or tramitted by the Business Process?	The average volume from the last three years is 21,330,931 inquires.									
Number of business transactions in average?	The average volume from the last three years is 21,330,931 inquires.									
Legacy System Module (SAP) the Business Process operated on?	SAP Module, Object name; SCE Enterprise System/Application name: 3rd party application integration; <table border="1"> <tr> <th>System</th><th>Module</th><th>Operated By:</th></tr> <tr> <td>CSS</td><td>.....</td><td>MSP</td></tr> <tr> <td>Outage Notification Dispatch</td><td>Corporate System Engineering</td><td>3rd Party</td></tr> </table>	System	Module	Operated By:	CSS		MSP	Outage Notification Dispatch	Corporate System Engineering	3rd Party

4 Technical Considerations

4.1 RICEF-W Assessment

All of the Forms, Reports, Interfaces, Conversion items, Extensions/Enhancements and Workflows (RICEF-W) that have been identified for this BPD are detailed in the tables below and will represent the totality of all RICEF-W items documented at the time of sign-off of this BPD. Any RICEF-W items that are confirmed via change control after this BPD receives final sign-off, will be managed within Southern California Edison's APSE environment and not within this document.

4.1.1 Reports

Report Name & Description (List Requirements met by this Report)	Complexity	Reference ID
N/A		

4.1.2 Interfaces

Interface Name & Description (List Requirements met by this Interface)	Complexity	Reference ID
N/A		

4.1.3 Conversion

Conversion Name & Description (List Requirements met by this Conversion)	Complexity	Reference ID
N/A		

4.1.4 Extension/Enhancements

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
- Ability for agent to issue a refund on a deposit (transactions based on business rules) - Ability for agent to issue a refund (transactions based on business rules) - Ability for agent to disburse the full or partial deposit amount to the account - Ability to transfer customer payment from one contract account to another - Ability for user to issue refund check for account that has balance owing (e.g. Payment was sent and applied to account in error e.g. mortgage payment to SCE) - Ability for front office agents to view status of refund check, i.e. cashed, not cashed - Ability for front office agents to view when uncashed refund check is escheated to the State of CA	Medium	E-CIM-CS-02 - Transaction Launcher

Extension Name & Description (List Requirements met by this Extension)	Complexity	Reference ID
The system shall automatically alert major Account Managers if one of their customers is pending Dunning Disconnection	Medium	E-CIM-CS-06 – Alert Account Manager for Dunning Disconnect
- Ability for agent to waive late payment charge - Ability for agent to waive Reconnection fees - Ability for user to waive the service connection charges and waive turn-on fee Note: Requirements met through FOP	Medium	E-CIM-CS-06 – Reverse charges via Reserve button
The system shall enable a user to easily view all historical and pending EE rebates for a customer.	Medium	E-CIM-CS-02 – P&P view on historical and pending rebates
The system shall enable a user to view historical and pending HEAP pledges in the system. The system shall enable a user to view the program enrollment status for a customer (e.g., DR, EE, billing, payment, etc.).	Medium	E-CIM-CS-02 – P&P view on program information

4.1.5 Forms

Form Name & Description (List Requirements met by this Form)	Complexity	Reference ID
N/A		

4.1.6 Workflows

Workflow Name & Description (List Requirements met by this Workflow)	Complexity	Reference ID
N/A		

4.2 IDEX Considerations

N/A

4.3 Production System Cut-over Considerations

N/A

4.6 Other Considerations

N/A

5 Change Management

5.1 Change Impacts

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
In SAP, contracts cannot be moved from one contract account to another which is current functionality. In future, to move contracts, a move in will need to be issued. This will have customer impacts as well possible escalations for scenarios such as Change Name Only - Deceased or for customers that request for summary or solo billed. Service history begins again as well as a new contract and contract account is created. Customer satisfaction will be impacted. Customer Impact: Customers' will receive new account information because a new contract will need to be created. They will need to look at the previous account to view any historical usage information.	Process (227)	CS-CSOD-CCC All; CS-CSOD-RSO-All ; Ext-Customers-All; CS-BCD-All; CS-CSOD-Consumer Affairs	High	High
Business Customer Division (BCD) will have the ability to issue extensions and payment arrangements. Currently if BCD needs to issue an extension or payment arrangement, they send their requests to RSO Credit to complete. Allowing BCD to Issue extensions/payment arrangements will minimize hand offs.	Process; Benefit/Improvement; Job Roles; Decision Making (268)	CS-BCD-All; CS-CSOD-RSO-Credit	Medium	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Since the deposit and energy accounts are part of the same contract account, there is minimal chances of misapplied payments. Today, customers may confuse the deposit account for their energy statement and make payments to the deposit account instead of the energy which causes collection action to occur. This can increase customer satisfaction and reduce complaints	Process; Benefit/Improvement (269)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-Consumer Affairs	Low	Low
In SAP, bill line item charges are simpler to view. Users can select line items with ease for reversal or adjustments. There are less chances of selecting the incorrect line item or amount compared to the current system. Currently users have to free form certain items if they are unable to select the line item charge. There will be minimal errors when completing the reversal/adjustment.	Process; Benefit/Improvement (270)	CS-CSOD-CCC All; CS-CSOD-RSO-Credit; CS-CSOD-Consumer Affairs	Low	Low
SAP will be able to automatically process a policy adjustment based on approved thresholds. Currently users need to issue a request to be sent to RSO to process the adjustment. This automation is a process efficiency with no hand off required as long as it is within pre-approved thresholds. It is a key control for RSO and potential issues with incorrect requests (e.g. LPC or line adjustments). It may require a report to validate policy adjustment completions. If the amount is higher than business rules, then a ticket will need to be issued to complete the request.	Process; Benefit/Improvement; Job Roles; Staffing Levels; Decision Making (272)	CS-CSOD-CCC All; CS-BCD-All; CS-CSOD-RSO All;CS-CSOD-Consumer Affairs	Medium	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Users will have the ability to create a BPEM through a ticket to different departments for multiple requests such as delayed billing, EFT reversals and other credit inquiries etc. Currently requests from BCD are centralized and sent to COE for review and then sent to other organizations. The CCC currently sends email requests or a basic work request to RSO to complete certain back office transactions. SAP process minimizes hand offs and provides a faster resolution for the customer with minimal processing time.	Process; Job Roles; Benefit/Improvement (300)	CS-BCD-All, CS-CSOD-CCC-All; CS-CSOD-RSO-All	Medium	Medium
In SAP, the User Utility Tax (UUT) exemption documents that are received from the approving agencies (e.g. cities or counties) will be stored at the BP level. Currently once the email or letter is received from the agency, the approvals are kept on file electronically and in a paper file. The ability to store in SAP provides visibility of the documentation at the BP level as well as eliminate the need to store and maintain the paper documents associated with Tax Exemption Status.	Benefit/Improvement; Process (387)	CS-CSOD-RSO-Credit	Low	Low
Payment transfer from 1 account to another will take multiple steps in SAP. The agent will need to move the payment from one account to a clarification work list and then move from the work list to another account. Current process is one step based on selecting the payment. This can add more processing time for the agents that will need to move payments.	Decision Making; Process (571)	CS-CSOD-CCC All	Low	Medium

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Front office does not have the functionality to accept one time payments (eg quick check payments). Users can either guide the customer back to self service payment channels such as sce.com or IVR or issue a payment through the back office via the FOP. The process of creating a payment through the back office is complex. Users will need to select the document line items to post the payment. Currently users can issue a quick check payment if customer is requesting to make a check payment over the phone. Customer impact: If the payment is not posted to the oldest line item billed, customers may still get disconnected if it is not posted correctly. Also if customers choose to go through a self service option, customers may need to go to a channel they are not comfortable in using.	Process; Culture Shift (908)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-Consumer Affairs	High	Medium
Users will be able to issue refunds as today based on business rules. However the steps will be completed in the back office through the FOP launcher.	Process; Decision Making (958)	CS-CSOD-CCC-All; CS-BCD-All; CS-Consumer Affairs	Low	Low

Change Element Short Description	Change Impact Category	Audience Group(s)	Impact	Business Effort
Users will need to use multiple systems (eg. C4C, S/4 Hana and iEnergy) to complete credit, billing and program inquiry related calls. There will be a single sign on for front office users accessing these windows. Currently users complete a majority of their transactions through CWO, CSS or Legacy CRM with minimal use of other systems. This will increase average handle and processing time as users will need to review multiple systems to have a complete review of the customer's account.	Compensation/Performance; Decision Making; Process; Staffing Levels (988)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-Consumer Affairs	High	High
SAP will automatically reconnect service if sufficient payment has been made to reconnect service including a full payment. The system will automatically issue a reconnect order for the contract account. If a manual reconnect order is needed, the user will need to go to the back office through the FOP to complete. Currently, reconnection requests have to be issued by an agent if customers make a payment via the agent via their main system (CWO or CSS).	Benefit/Improvement; Process (989)	CS-BCD-All; CS-CSOD-CCC All; CS-CSOD-Consumer Affairs	High	Medium

Below is a description of each:

Change Element Short Description: Describes the 'As-Is' scenario and what is changing.

Change Impact Category: Determined by asking the questions below.

1. **Staffing Levels** - Is the work effort increasing or decreasing (staffing levels), and how (e.g., task automation, new process/tasks)?
2. **Job Roles** - Will the responsibilities, authority, or required skills for a job or job roles change? Will people be reporting to new leaders? Will managers' responsibilities change?
3. **Compensation / Performance** - Will the changes have such an impact on roles of an individual that merits a change in how they are compensated or how their performance will be evaluated? What behaviors are rewarded and recognized?
4. **Organization Structure** - Is the ownership of the Process or Data changing (think departments, jobs, or roles, not individuals)?
5. **Decision Making** - Will any of the changes impact how decisions are made, by or between, business units / departments? Who makes them, how they determine the criteria for making a change?

6. **Culture Shift** - Will organizational value systems impact the way change happens or be impacted by the change? What are the underlying values of the organization that will directly influence the way change will be accepted and how much work will ultimately be required to ensure successful outcomes for the business?
 7. **Location / Facilities** - Will the change impact the physical location where they process is being implemented or require changes to the facilities to enable the process to be effective?
 8. **Process** - Any change to the current process (e.g. manual process becomes automatic, or vice versa)? Are there new processes being introduced or an old process being decommissioned? Is there a requirement to change an existing business rule or business policy? Will new business rule or policy needs to be introduced and enforced or complied to?
 9. **Regulatory/ Legal** - Are there any legal / regulatory requirements that might be impacted
 10. **Technology** - Are other applications impacted (e.g., going away, becoming read-only), or are there new requirements (e.g., new SW / HW, new version)
 11. **Benefit/Improvement** - Will there be an improvement or benefit to any of the stakeholders because of this change. (Be sure to include any pain points that are being alleviated)
 12. **Other** - Are there emotional implications stemming from any of these changes (think of buy-in issues or fears)
- Audience Group(s):** These are the affected departments, divisions etc...

Impact: The following were used to determine the impact:

Level	
HIGH 	- BUSINESS OUTCOMES: Drives change to cost, efficiency, customers. - JOB: More than 40% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: - Shift from manually intensive role to using new tools and systems - Employee is going to be redeployed - High level of "technical or functional" changes needed for a particular group - Significant changes to culture & attitudes to get job done - Big shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) - RELATIONSHIPS: High level of "relational" changes for a particular group (e.g. reporting relationships, effective working relationships with customers, teams, and stakeholders etc.) - POLICIES/PROCEDURES: Processes, procedures, and/ or policies are not in place today and need to be defined. - REGULATORY REQUIREMENT: drive changes to the way we comply
Level	
MEDIUM 	- BUSINESS OUTCOMES: Limited change to cost, efficiency, customers. - JOB: 20-40% of individual's job will change and / or additional skills are required with significant changes to Job Documents, Examples include: - Employee job title or function is modified, resulting in minor to moderate changes to roles and responsibilities. - There will be some changes to the culture & attitudes - Shift from moderate technology use to using new tools and systems - Moderate level of "technical or functional" changes needed for a particular group - Moderate shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) - RELATIONSHIPS: Moderate level of "relational" changes for a particular group (e.g. reporting relationships) - POLICIES/PROCEDURES: Processes, procedures, and/or policies are inconsistent today and not defined or documented in many cases - REGULATORY REQUIREMENT: No impact.

Level	
LOW 	• BUSINESS OUTCOMES: No impact. • JOB: Less than 20% of individual's job will change and / or additional skills are required with significant changes to Job Documents. Examples include: • Employee job title or function is slightly modified with few, if any, changes to roles and responsibilities • There will be little change to the culture & attitudes • Shift from using some technology to new systems & tools • Light level of "technical or functional" changes needed for a particular group • Small shifts in accountability or reporting (autonomy, responsibility, decision making, etc.) • RELATIONSHIPS: No impact or light level of "relational" changes for a particular group (e.g. reporting relationships) • POLICIES/PROCEDURES: Processes, procedures, and/or policies are consistent, but not well documented, and will need to be documented/ Other minor changes to be made. • REGULATORY REQUIREMENT: No impact.

Business Effort: Initial assessment of the impact to the business High, Medium, Low

6 Requirements
